The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

FEMA awards Colorado $1 million wildfire grant (Loveland Reporter-Herald)

By Dana Rieck

Reporter-Herald Staff Writer
Posted: 08/20/2016 05:25:56 PM MDT

Republican Sen. Cory Gardner's office announced this week that the Federal Emergency Management Agency is awarding $1,194,483.86 to the Colorado Division of Fire Prevention and Control.

Matthew Branch, the Northeast Regional Fire Management officer for the Colorado Department of Public Safety Division of Fire Prevention and Control, said the money is a reimbursement for costs associated with past fires.

It is called a fire management assistance grant, which is something states apply for after responding to large fires.

"Most of these costs are borne by the local fire department and the county," he wrote in an email. "These entities bill the state and we reimburse them out of the state budget. Several years later we get the money back from the federal government."

Once approved, according to Branch, the grants can pay for 75 percent of the costs associated with fighting those fires.

"I welcome more than $1 million from FEMA to assist with wildfire response efforts in Colorado," said Gardner in the news release. "I'm confident the state of Colorado will maximize the federal grant to both preempt and mitigate the destruction caused by wildfires. I'll continue to advocate at the federal level to ensure Colorado receives the resources it needs to keep our communities safe."

Manitou Incline Closed for Construction (KOAA TV, Colorado Springs)

8/22/16

COLORADO SPRINGS - The Manitou Incline is now closed as the cities of Colorado Springs and Manitou Springs start phase 2 of improvements to the popular trail.

Construction is expected to last around 4 months with the main goals of: improving safety, enhancing the hiking experience, improving the long-term sustainability of the trail and increasing accessibility.

They will also clean up debris along the trail and add new drainage structures to protect the trail from eroding away.

Colorado Springs is responsible for the general oversight of the trail, and the improvements are being funded by a FEMA Hazard Mitigation Grant and Trail, Open Space and Parks Funding.

Beaver Creek fire evacuation order lifted; two Colorado wildfires 100 percent contained (Denver Post)

By Ellis Arnold | earnold@denverpost.com

August 21, 2016 at 4:36 pm

An evacuation order was lifted in the Beaver Creek fire area near Walden and the Wyoming state line yesterday, said John Abernathy, spokesman for the Denver Fire Department.

Some evacuees from 50 total residences have begun to return to their homes, Abernathy said, but low relative humidity and winds up to 25 mph are expected to create critical burn conditions Monday and Tuesday. The fire, which is 53 percent contained, started June 19. Total containment is expected Oct. 21.

Heavy beetle-killed timber in the area has been fueling the fire, which has required continued ground and air efforts. Recent cool, moist weather aided the fight, but warming is expected until Wednesday. Season-ending wet weather is likely the only factor that will put out the fire, Abernathy said.

The fire has burned 36,961 acres, and the cause of the fire is still under investigation. A total of 17 structures, including one residence, have been lost, Abernathy said.

The lightning-caused Spring Creek 2 fire south of Parachute burned 621 acres but was 100 percent contained as of Friday, according to federal agencies. There have been no injuries attributed to the fire, which started Aug. 12, and no primary residences were lost despite the fire moving within a few feet of several homes. Four buildings, three vehicles and three trailers were damaged or destroyed, and evacuation orders covering about 20 homes were lifted Aug. 14.

The Hayden Pass fire southeast of Salida was 60 percent contained as of Aug. 4, according to federal agencies, with recent monsoonal weather dropping moisture in the area. The 16,754-acre lightning-caused fire started July 8, and it may present a runoff issue because of the rain. All evacuations ended as of July 21 after people were ordered to clear out of 140 residences in the area. The fire is expected to be contained Oct. 1.

Fire crews contained the Blair fire 100 percent as of Aug. 1, said David Boyd, spokesman for the federal Bureau of Land Management. Lightning started the fire near Colorado 64 between Rangely and Meeker; about 1,140 acres have burned since June 29.

Crews focused on keeping the fire from moving north and east, where a power-line corridor, oil and gas pipeline and the highway would have been vulnerable. There were no injuries or evacuations, Boyd said, as the fire was in a remote area.

MONTANA

FEMA and Montana Disaster Emergency Services Visit Baker

(Fallon County Times)

SEVERE SUMMER WEATHER

Laurie Hassell and Kent Atwood display a weather map tracking severe weather storms throughout Montana.

Laurie Hassell, Federal Emergency Management Agency (FEMA), External Affairs Specialist; Kent Atwood, CFM, Montana Disaster & Emergency Services, Hazard Mitigation Officer and Tim Tennis, Recovery Bureau Chief, Montana Disaster & Emergency Services were in Baker on August 9.

By Sherry Vogel

They were conducting a briefing to Fallon County and City of Baker applicants as they proceed to set-up documentation to receive federal funding after Baker was designated to receive a Presidential Disaster Declaration.

Atwood explained how the entire process works. Tennis expounded on how to apply for the funds. They both covered the scope of work for the Project Worksheet (PW) using the actual tornado documentation including cleanup and debris removal reports.

The preliminary final damage assessment is at $1.5 million. This amount surpasses the $1.4 million required for a Presidential Disaster Declaration. This final figure of the disaster damage could actually be more in the final analysis.

Whereas Hassell was in Baker to represent the Response and Recovery standpoint. Atwood was focused on the mitigation perspective of the disaster. **Mitigation meaning to identify and reduce the severity of the next natural disaster.

Officials estimate the Copper King Fire doubled in size Sunday afternoon (NBC TV, Helena)

By: KECI Staff
Updated: Aug 21, 2016 08:07 PM MDT

MISSOULA, Mont. - The Copper King Fire burning near Montana Highway 200 and Thompson River Road in Sanders County is now estimated to have burned over 6,000 acres. The fire had burned just over 3,400 acres as of Sunday morning.

Fire officials tell NBC Montana that the fire expanded to the northeast, chewing through around 3,000 acres. The explosive growth meant a cloud of thick smoke spread as far north as Creston and parts of the Swan Valley as of 8 p.m. on Sunday. The new growth is away from structures immediately threatened by the fire.

Officials with the Lolo National Forest say there is poor road access and firefighters and public safety remains the top priority. Fire crews are busy on the south and west sides of the fire near Highway 200 and Thompson River Road where structures are threatened.

The 297 people working to contain the fire will continue to focus on structure protection and keeping Highway 200 open to traffic. A Red Flag Warning is in effect for the fire on Monday afternoon, meaning more explosive growth is possible due to dry and windy weather.

NORTH DAKOTA

Morton County declares emergency with pipeline protest

LEANN ECKROTH Bismarck Tribune 12 hrs ago

With the protest against the Dakota Access Pipeline swelling to 2,000 people near Cannon Ball, Morton County officials may seek to access emergency funds to pay overtime to their deputies and other law enforcement agencies assisting Morton County in keeping the protest boundaries safe.

Protesters oppose the pipeline beneath the Missouri River because they fear it could contaminate their water supplies.

A special Morton County meeting will be held 4 p.m. Monday to address the emergency declaration, signed by Cody Schulz, chairman of the board, last week.

"This is to maintain public safety and to make sure the legal rights of everyone is enforced," Schulz said Sunday. "This has required a great deal of law enforcement manpower and time."

Schulz signed the declaration Aug. 15 and state law requires the remainder of the county board ratify the declaration within seven days to keep it binding.

County Commissioner Bruce Strinden said Sunday the declaration will allow the county to use its own emergency funds to pay deputies and other law enforcement for overtime tied to the protest.

"Without an emergency declaration, we cannot access those fund," said Strinden, who estimated the county may have banked about $125,000 in emergency funds. "We're getting help from neighboring counties and cities' law enforcement through mutual aid agreements, and appreciate it, but that help doesn't come free. We have to compensate them for food, lodging and of course pay. We're only a week into this."

Protesters said they are keeping the demonstration peaceful. Yet, the protest has challenged the county's enforcement capacity.

"This is a very large protest -- 2,000. So a protest of that size is of a concern to us," Strinden said. "People have a right to protest. The law enforcement will support legal activity in a protest unless it goes the other way."

"Right now, our primary goal is keeping everyone safe," he added, speaking of the need to close Highway 1806 during the protest. "There were vehicles parking on both sides of 1806. We don't want anyone injured or accidents."

Gov. Jack Dalrymple signed a declaration of emergency Friday. Strinden believes the state will pay for a large portion of North Dakota Highway Patrol troopers enforcing the highway because it lies in their jurisdiction, he said the county at this point will have to reimburse other law agencies for their assistance.

"At this point, we aren't seeking additional funds from the state," Schulz said. "The governor's declaration allows us to request extra resources, manpower or equipment from the state."

Governor issues emergency declaration in response to pipeline protests

CAROLINE GRUESKIN Bismarck Tribune

Updated Aug 19, 2016

North Dakota Gov. Jack Dalrymple issued an emergency declaration for southwest and south central North Dakota in response to protests against the Dakota Access Pipeline near Cannon Ball.

The declaration starts a process by which state agencies can get additional funding, said Greg Wilz, director of the Homeland Security Division of the state Department of Emergency Services.

Dalrymple said in the declaration that the state is committed to protecting the right to lawful protests, but recent events have created a "significant public safety concern."

The protests have grown substantially over the past week as about 1,500 people have gathered to demonstrate against the pipeline being drilled under the Missouri River. Large campsites have been established for the protesters. Twenty-nine people have been arrested during the demonstrations.

The Morton County Sheriff's Department has been the central law enforcement agency involved in monitoring the protests, but several state agencies have gotten involved.

North Dakota Highway Patrol has sent officers to the protest site, Wilz said. The health department has provided portable water trailers and a medical trailer at the protest camp. The transportation department has assisted with the road detour on Highway 1806 and put up barriers and signage.

Wilz said he will be looking at funding requests from the agencies, make an estimate and ask the emergency commission for an appropriation. The commission can authorize emergency services to get a loan from the Bank of North Dakota.

He estimated the additional resources could cost from $750,000 to $1 million, if the protests continue for the next few weeks.

The declaration also means an emergency operations center will be set up in the emergency services building, so that the agencies can coordinate their resources, Wilz said.

The money does not funnel directly into the local agencies, such as the Morton County Sheriff's Department. Rather, it reimburses the state agencies that provide personnel and material resources to local authorities.

Morton County declared its own state of emergency on Monday, for the purpose of tapping into its emergency fund and creating public awareness, said Cody Schulz, chairman of the county commission.

Schulz said the biggest expense for the county has been law enforcement, including overtime for the sheriff's deputies and assistance from other agencies, including the Mandan Police and the Cass and Mercer County Sheriffs.

The governor's emergency order does not include activation of the National Guard.

Protesters settle into camp life

CAROLINE GRUESKIN Bismarck Tribune

Aug 19, 2016

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere Thursday afternoon at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Wednesday, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Aug. 24, when a hearing will be held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement Friday no weapons were seen.

Many at the camp saw the previous days' efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It's been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Thursday, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Water district's eminent domain attempt for F-M diversion stalls, but case not dismissed

By Helmut Schmidt on Aug 19, 2016 at 2:52 p.m.

FARGO — An East Central District judge has ruled that the Cass County Joint Water Resource District, which is trying to get a permanent right-of-way easement for 80 acres of farmland for the Fargo-Moorhead diversion, has not followed the proper procedures for eminent domain proceedings, court documents show.

At the same time, Judge John Irby denied a motion by Donald Cossette and the Angela R. Cossette Revocable Living Trust to dismiss the water district's attempt to use eminent domain for the Horace-area land, documents show.

According to court records:

The water resource district is trying to get a permanent right-of-way easement on 79.34 acres owned by Donald Cossette and the Angela R. Cossette Revocable Living Trust to build a F-M diversion inlet.

The district extended a final offer of $476,040 for the land on May 18, 2016. That offer was rejected.

Irby ruled the water resource district failed to file a needed petition in the case, provide appropriate public notice and a hearing, allow interested parties to answer the petition, and have the court hear the case, allow the petition to be amended as needed and issue its findings and assess costs.

Irby said the district was also walking a line between taking right-of-way sufficient for its purposes while avoiding a purchase of the land, or fee simple, which is not eligible for "quick take" eminent domain.

Irby ruled that the district will have to amend its eminent domain complaint.

Cossette's attorney, Jonathan Garaas of the Garaas Law Firm in Fargo, said Friday, Aug. 19, that he does not comment on cases still being litigated.

SOUTH DAKOTA

The Flood: One Year Later (KELO TV, Sioux Falls)

Don Jorgensen
KELOLAND, Sioux Falls
August 19, 2016

Sioux Falls, SD

One year ago, Sioux Falls was inundated by major flooding.

The hardest hit area was in the southwest part of the city where seven inches of rain fell in one hour. It was a night many of us won't soon forget.

The night was August 27th. The skies opened up over Sioux Falls and dumped more rain than the city had seen in recent memory.

Streets flooded quickly. Vehicles stalled out and many businesses flooded out, including the Signature Salon.

When we last met the owner, Jeff From, he was busy cleaning up what mother nature destroyed in minutes.

Today, From is back in business....

"It's hard to believe it's been a year," From said.

....but not without a lot of hard work along the way.

"It was a good eight months of solid; morning, noon and night trying to get things in place," From said.

The downpour and flooding that followed, caught many off guard.

The city had spent millions of dollars upgrading the drainage systems, but in some parts of town, seven inches of rain in a short amount of time was too much for it to handle.

"It was a large event", Public Works director Mark Cotter said.

Cotter says the drainage system worked as well as it could, but following the event, he knew more could be done.

"Probably the first thing and most important thing we did was take a rate case to the city council and they did support us to continually raise rates through 2019," Cotter said.

Cotter says those rate increases will help pay for more improvements; plus conduct more drainage studies.

"So when neighbors call and say 'this just doesn't drain right,' we set aside more dollars now to go out and do an updated hydro study, so we can understand what's happening and ultimately look at some alternatives to improve it," Cotter said.

Plus, the city began taking a closer look at drainage easements around town. It identified a few

where the homeowners, over the years, had made improvements to those easements with landscaping, trees and bushes.

But in reality, those beautification improvements, became obstructions and didn't allow water to flow freely to designated detention ponds.

So, this past year, the city worked with the homeowners to remove those obstructions and regraded the land. That way during a heavy rain storm like last year, the water will go where it's supposed to go.

But in one area of town, around 35th and Duluth which always seems to have water problems during torrential rains, drainage improvements are hard to come by.

So, instead of investing millions of dollars in trying to upgrade the infrastructure, the city bought a number of the homes and is now in the process of tearing them down.

It's going to reclaim the land and turn it into green space with detention ponds.

And finally, the city implemented new building codes, so homeowners shouldn't have to worry about flooding if they live near one of those drainage easements.

Cotter shows us why using this handsketched diagram.

"If this is a drainage way in the backyard, we used to recommend that the water surface, we used to recommend that the lowest floor of the house be two feet above that water surface elevation, now we don't recommend, it's a standard," Cotter said.

Don: Builders know this now? That it's a standard,
Mark: Yes.
Don: They can't wiggle their way around it.
Mark: That's right,"

From has made his own improvements to his salon that he hopes will protect it if the city ever gets hit with another 100 year flood.

Using concrete, he added more height around his window wells and built up around his stairwell leading to his basement, where most of the water came in last year.

"Hopefully if that were to ever happen again, it wouldn't be able to," From said.

Only time will tell, but for now he's just glad to be back in business.

"I try not to even remember and think about it anymore, people ask me about it today and it's like something you want to forget," From said.

From's damages totaled in the hundreds of thousands of dollars. He says very little of that was

covered by flood insurance. He hasn't decided yet if he's going to sue the city to try recover some of his money.

Ranch Life Celebrated In Union Center Gathering Three Years After Storm (KELO TV, Sioux Falls)

Kevin Woster
KELOLAND, Sioux Falls
August 20, 2016

The Rancher Round-up in Union Center, S.D., is an annual celebration of ranch life. But it's also a testament to survival in a beautiful-but-harsh landscape.

Professional survival skills were tested in unprecedented ways almost three years ago when western South Dakota was hit by an early October blizzard that killed tens of thousands of cattle and other livestock.

Republican state Sen. Gary Cammack of Union Center, who also ranches and owns a ranch-supply store, had to bury more than 100 cattle in a hastily dug pit in his pasture after the storm. Other ranchers lost several times that many cattle.

"If there's anything akin to a gut punch for the whole cattle industry, that was it," Cammack says. "It was just an amazing hit. When the storm broke, within 35 miles there were 20,000 dead cattle. It was just beyond imagination."

Help came from the government, private relief funds, cattle donations from other ranchers and from higher market prices for remaining cattle.

“The generosity of cattlemen from all over the U.S. and neighboring states was overwhelming,” Cammack said. “The stories that will never be told of generosity cattleman to cattleman, just overwhelming.”

A South Dakota Rancher Relief Fund raised and distributed millions of dollars and avoided the kind of questions or controversy that sometimes can plague such efforts.

“That should be a blueprint for fundraising and helping in natural disasters,” Cammack said. “I never heard one bad thing about that. It was just run very smoothly, very fair, the way they put that thing together, and the generosity was overwhelming.”

With a perfect joining of forces and sources of assistance, the recovery came much faster than Cammack expected.

"With the generosity of the markets and some help from the federal government, I'd say, really, within about 24 months, most folks had enough of a boost that they were back and economically viable,” he said.

So the heavy rains in Union Center Friday didn't dampen enthusiasm for the annual rancher rodeo and fair at Cammack's store. They just made it all more complicated. But it was a tiny challenge compared to the big ones faced in ranch country.

Besides, they needed the moisture. They usually do.

Silvia Christen, executive director of the South Dakota Stockgrowers Association, was at the celebration at Cammack's. She said she continues to be amazed at the recovery effort and how ranchers responded after the big blizzard.

"Grit is really the word that describes most of it," she said. "These ranch families at so at the mercy of the weather, and so at the mercy of the elements. And when you have a loss like we did with Winter Storm Atlas, many of them had a 50-percent loss overnight.

"And their faith and their commitment and their dedication and their trust that they can rebuild and then just get to work, that was a lot of it," she said.

Almost three years after Winter Storm Atlas devastated the livestock industry here, the Ranch Round-UP celebrates the land, its people and the spirit of survival.

"There was so much great help that came in in the form of money and prayers and all that," Christen said. "But at the end of the day it came down to these families getting out and getting to work and putting it back together."

Cammack says he has mixed feelings now when he looks at the hilltop in his pasture where more than 100 cattle are buried.

"You can't help but have some memories when you drive past that point," he said. "But having said that, that nob we excavated and buried all those cattle on is recovered and starting to get the native grass back on there. And today when you and I went out there, there's cattle that came right up and they're grazing right on there -- the living standing above the dead. So the country can be cruel, but it heals faster than you think."

So do the ranchers.

Home demolition aimed at keeping neighborhood dry (Sioux Falls Argus Leader)

Joe Sneve
Argus Leader, Sioux Falls
August 20, 2016

City Hall hopes tearing down a group of flood-prone homes in central Sioux Falls will help other houses in the neighborhood stay dry the next time the city gets dumped on with torrential rains.

It's not uncommon for homes in the area around Augustana University to have their basements flooded when Sioux Falls gets rain events. That's despite thousands being spent in recent years to divert the run off into newly constructed holding ponds and other infrastructure upgrades.

So about five years ago, Sioux Falls Public Works set its sights on creating more green space along Covell Avenue between 28th and 33rd Streets. But that meant existing homes would need to come out.

“Based on how steep this particular watershed was, there wasn’t an alternative that was a better fit than just to go in and start asking for voluntary buy outs. … But they just weren’t ready.” said Mark Cotter, director of Public Works.

But after last August’s torrential rains, the phone started ringing and Public Works has since acquired nine properties along Covell Avenue, which were demolished last week.

Cotter said once razed, the foundations will be filled in with sand to allow for a more permeable and absorbent surface.

“Over time as we capture more homes that are willing to sell voluntarily, if it makes sense we’ll develop a detention pond so we can hold and slowly release (the storm drainage).”

Only time will tell if the program will be enough to dry up the neighborhood. Cotter said engineers will continue to buy more homes if necessary. For now, about 14 other homes on the west side of Covell Avenue have been targeted, with 10 homeowners entertaining the idea of selling.

They can’t all be bought at once, though, due to budgetary restriction. Andy Berg, storm water manager in Public Work’s environmental division, said about $1.2 million has been spent so far acquiring the nine homes that were demolished last week.

Because Public Works doesn’t specifically budget for the project – it’s difficult to know how many homeowners will be willing to sell in the following year when the City Council passes its budget – Berg couldn’t say how many more homes will come out next year. Instead, Public Works diverts savings from other expenses that come in under expected costs toward the program.

“We’ve identified three that we’re going to have the appraisal process done on. So if we have the dollars … we can do a closing on those.”

UTAH

Utah brothers born, raised in Louisiana work with businesses to help flood victims (KUTV, Salt Lake City)

by Heidi Hatch |

Friday, August 19th 2016

(KUTV) Today the Red Cross announces -the catastrophic flooding in Louisiana is the worst natural disaster to strike the United States since Hurricane Sandy.

Pleasant Grove’s Ben Moak grew up in the Louisiana neighborhoods hit hardest. He moved to Utah 20 years ago with his large family, he set down roots and now owns Firebird Pizza and Pasta on Main Street in the small town.

“I have a friend that posted on Facebook saying only thing he has is his job, his family, and his truck -- and eight feet of water in his house. He lost everything.”

The flooding of hurricane Katrina was hard to watch, and now this time, the flooding hits close to home again and that's why he "wanted to do something 1500 miles away --to help our friends and family out."

Some of the worst hit neighborhoods are streets he and his siblings know well.

"We grew up in Louisiana, ,Walker Denham Springs is where we were born and raised."

The southern influence of his youth is evident in his kitchen, with a row of hot sauces and southern spices available to add kick to his Italian eatery.

He will start fundraising Tuesday night with a spaghetti dinner from 6 to 9 p.m. It will be $10 for a large plate of spaghetti , soda and breadsticks. "One hundred percent of the proceeds go to the people down there," he said.

Just across the parking lot from Firebirds is Chubby's Cafe, owned by Moak's brother who will be cooking up a little southern hospitality with a catfish fry next Saturday. The fry money will also go straight to the victims in Louisiana.

Jessica Erin is helping organize the event with the southern brothers and three other area restaurants including Cravings Cupcakes and Cravings Bistro.

"We got this huge trailer donated by Andrews Transportation and we are going to try and fill this baby up."

All of the restaurants involved are accepting monetary donations, food, clothing, diapers --you name it -- for the flood victims. Donations will be accepted during business hours through Saturday Aug. 27 at 9 p.m.

"We are excited to get this thing filled up and take it down to Louisiana."

All the business involved are just off Main Street in Pleasant Grove near the North Shore Shaved Ice shack, also giving a portion of their proceeds from Friday night to the cause. Lorri Jonas who worked at Chubby's and now owns the ice shack said, "I want to help because my heart is full."

Moak looks forward to community participation saying "the more the merrier, if you have to wait -wait, but the more the merrier."

Southern Utah University extends cybersecurity degree to Vietnam (St. George News)

August 20, 2016

CEDAR CITY — Southern Utah University classes will soon be taught in Vietnam through an international partnership with FPT Corporation, the largest Vietnamese telecommunication company.

The university will make its Master of Science in cybersecurity and information assurance available to students attending FPT University and its online counterpart, Funix University.

FPT Corporation is to southeast Asia what Verizon Communications Inc. is to the United States.

With many smaller entities comprising the company, FPT University has shown a pioneering spirit and a proactive approach to online student education and an increased international presence.

“This partnership extends the reach of SUU and the CSIS Department into Vietnam,” said Dr. Robert Robertson, department chair and associate professor. “It will bring individuals into the program whose perspectives will enhance and benefit fellow students at an international level.”

As the first online educational opportunity offered in Vietnam, FPT University and Southern Utah University are promoting the process of international cooperation in education.

In May, FPT University leaders and dignitaries from Southern Utah University, including President Scott L. Wyatt, signed the agreement to help increase professional training opportunities available to FPT students. At the end of June, university representatives Dr. Rob Robertson, Dr. Roger LaMarca, director of online admissions, and Dr. Stephen Allen traveled to Vietnam to train FPT University on the structure and implementation of the master’s degree program.

An attractive facet of the program is the online component, allowing students to attend school while still living, learning and working in their country.

“Students will receive the same experience and personalized instruction as a traditional SUU classroom while preparing themselves for the rapidly growing field of cybersecurity,” LaMarca said.

Cybersecurity professionals who battle cyberattacks that bleed companies and governments dry are in high demand. It costs an average $11.6 million per cybercrime incident, according to Info Security. Keeping these facts in mind, it’s no surprise that 42 percent of organizations are actively seeking information technology positions in information security, more than any other job, according to a LinkedIn Talent Search.

“They will receive a wide variety of instruction and coursework from this program,” LaMarca said, “including cybersecurity and IT policy; information, vulnerability and threat assessment; physical, personnel and operational security; and contingency, redundancy, emergency and disaster planning.”

Online Vietnamese students will have access to all the resources and materials available to students in a traditional learning environment. Throughout the program, which will begin this fall, these students will have access to a library, tutor and lecturer. They will be educated by leading experts in the cybersecurity industry and will also have opportunities to study alongside American students at Southern Utah University.

FPT Corporation is a multinational information technology company based in Vietnam, branching out to 19 different countries. Smaller entities of the corporation include software outsourcing, telecommunication, property management, education and financial services.

The Vietnam National Technology Research Institute founded the Food Processing Technology Company – the original full name of FPT – in 1988. In 1990 the company switched its core business to information technology and changed the unabbreviated name to Corporation for Financing and Promoting Technology.

The cybersecurity program has been tailored to achieve the highest efficiency and educational quality available online. This new partnership will help further available education in Vietnam and will increase Southern Utah University's international presence.

With a comprehensive international environment and a wealth of knowledge taught by high profile cybersecurity professionals, including NUIX's Chris Pogue, Southern Utah University is helping to advance all of its students in this fast-growing career field. The university works hard to make it possible for nontraditional students and working professionals to earn a master's degree.

Those who are interested in this program can contact Southern Utah University's online admissions team at 435-865-8665 or onlineadmissions@suu.edu.

Our Views: Not Our First Recovery Rodeo (Baton Rouge Advocate)

Baton Rouge (LA) Advocate, August 21, 2016

In Louisiana, the emotional and physical impact of what may be a 1,000-year flood event is still being absorbed.

What our leaders cannot afford to do, though, is to let the future take care of itself.

As Gov. John Bel Edwards said Tuesday, the rescue and comfort of the displaced is the first priority. "Saving life is the most important priority we have," Edwards said Tuesday. "We will dedicate every resource to that effort until it is no longer needed."

But he also said he would take the opportunity to talk long-term recovery with Craig Fugate, head of the Federal Emergency Management Agency.

That's smart.

FEMA is under different and we believe much improved management since the hapless Michael Brown at the time of hurricanes Katrina and Rita in 2005. The high-profile impact of Hurricane Sandy in the northeast in 2012 also refocused attention on the Stafford Act, the federal law governing disaster aid.

Louisiana is better placed than in earlier disasters, but that doesn't mean it's easy sailing.

U.S. Rep. Garret Graves, of Baton Rouge — whose district was the hardest-hit — was busy visiting shelters and seeing his constituents. But he said in a telephone interview Tuesday that Congress needs to assess whether existing law is enough to deal with an event of this magnitude.

Graves said he's already talking with U.S. House members of both parties about federal recovery assistance. "We're not going to get there without national attention," Graves said, in an echo of Fugate's comments that the American people generally have probably been more focused on the Olympics and the national election than the Louisiana flood.

Fugate said that FEMA would respond unhesitatingly whether the national media spotlight comes or goes.

That's encouraging, but we know from the struggles of a decade ago that bureaucratic tangles and the dueling political parties on Capitol Hill can get in the way of help that Louisiana needs.

The spirit of unity and generosity, including from people and institutions across Louisiana and the nation, remains critical in this time of trouble. Job one of the recovery, as Edwards emphasized, is for the affected households to register with disasterassistance.gov. Quantifying the damage is important to achieve appropriate federal response.

But leaders are right to worry about the future, and plan for it.

FEMA Halts $30M To State (Jackson, MS, Clarion Ledger)

By Therese Apel And Geoff Pender

Jackson (MS) Clarion Ledger, August 19, 2016

The Federal Emergency Management Agency has halted $29.9 million in reimbursements to the state of Mississippi for retrofitting homes after Hurricane Katrina, saying the state has failed to provide documentation, overspent and appears to have had lax oversight over the program.

The Department of Homeland Security's Office of the Inspector General released a report that states that the Mississippi Emergency Management Agency has not been able to provide documentation for around $30.5 million that was paid to contractors to retrofit 985 homes on the coast. The original program was approved to retrofit 2,000 homes for $29.9 million.

The OIG has recommended, and FEMA agreed, that the federal government "deobligate" the money until Mississippi can reconcile what it claims it spent. If Mississippi can't convince the feds its spending was proper, the state could be on the hook for all or part of the spending.

MEMA Director Lee Smithson released a statement Thursday after 6 p.m. stressing that he was not over the agency when the mismanagement occurred.

"We are confident that most of the money will be deemed eligible by FEMA and the remaining funds will be recovered by the state," he said.

Gov. Phil Bryant in a statement Thursday night said he agrees with Smithson the spending "will be eligible for reimbursement" and "the state will aggressively seek to recover the remainder of the funds."

"I appreciate director Smithson taking swift action upon discovering the issues outlined in the report," Bryant said. "It is important to note that the employees repsonsible for the retrofit program for the period OIG examined are no longer at MEMA.

The OIG report says that although Mississippi became aware of improper oversight of the program as early as December 2014, it did not take any action to address the problem until February of this year.

Smithson said the money that was actually put toward the construction should end up being reimbursed by FEMA, and that the state will get the rest of the money out of ARA, the primary contractor on the jobs.

State guidelines and general accounting practices require that more than one person have oversight of similar programs. The state Department of Financial Administration gave oversight to one employee, who came with the program to MEMA when the program was moved over in 2012.

Then-MEMA Director Robert Latham said he was not comfortable with the program having no oversight.

"When the Coastal Retrofit program came to MEMA and I found out there wasn't any oversight, I said, "I want Horne involved in this, get them to start looking at all the invoices and processing it, and they were doing it as a courtesy because it wasn't in their contract. They agreed to start looking at it."

The report states that the employee who had oversight of the program, Deb Biggers, would not turn over some of the invoices to Horne CPA or to investigators.

Smithson said since he took office, Biggers has been terminated and he has hosted conference calls with Horne accountants and the Office of the Inspector General every week in order to keep them up to date with the progress of the audit.

"I don't want to speculate whether there was any graft or corruption on the part of Ms. Biggers or anyone else at MEMA," Smithson said, adding, "Deb Biggers should hace known that the payments that were made to ARA were improper. She modified the scope of work with the original contract with FEMA without getting FEMA permission and allowed ARA to inflate their program costs."

Latham said when he raised questions about the payments and the program, he was assured by his staff that everything was on the up-and-up.

"I'm concerned that if this is in fact true and it shakes out like it sounds, obviously I've got staff that let me down. When I consistently asked questions about these different things I was assured that FEMA was involved and that we were paying in accordance with a contract," he said.

Latham's Chief of Staff was Bill Brown, who he said he went to with any questions about the program.

"When issues would come up I'd get Bill to handle it, and if I thought I wasn't getting answers, I'd bring in Deb" and an employee who handled mitigation, Latham said.

OIG findings:

Some key findings of the OIG audit of Mississippi's spending on the Katrina retrofit program:

Mississippi allowed one employee complete authority over the program, which goes against basic accounting and oversight principles including Mississippi's own agency accounting rules.

The program was approved at $29.9 million to help retrofit an estimated 2,000 homes. The state claims to have spent $31.5 million on 945 homes.

The state has not provided documentation for $30.5 million it says it paid to contractors.

Although Mississippi became aware of improper oversight as early as December 2014, OIG says it did not take any action to address the problem until February of this year.

While working for state DFA and MEMA, the employee in charge approved $31.5 million in payments, more than the amount of the grant, and did not allow a hired accounting firm to reconcile more than $30 million in invoices. "However, no one above the employee's authority questioned the situation," the report says.

Retrofitting 2,000 homes was estimated to cost $14,944 each, but Mississippi spent $33,308 on average, and MEMA "did not provide any substantial evidence to justify the increase in costs.

The employee over the program, the OIG said, would not allow federal or Mississippi officials access to more than $30 million worth of contractors' invoices. This led OIG to question MEMA, whose new director contacted the state attorney general's office.

MEMA contends it has completed work on 945 homes for $31.5 million, but has to date provided invoices for only 12 homes, at $958,000. DFA records as of May only show $20.4 million being spent on the program.

Of the $958,000 in invoices provided so far, only $640,000 represented actual work on homes, with $318,000 in temporary employee salaries and administrative costs.

Whose Lives Should Be Saved? To Help Shape Policy, Researchers In Maryland Ask The Public (NY Times)

By Sheri Fink

New York Times, August 21, 2016

BALTIMORE — In a church basement in a poor East Baltimore neighborhood, a Johns Hopkins doctor enlisted residents to help answer one of the most fraught questions in public health: When a surge

of patients — from a disaster, disease outbreak or terrorist attack — overwhelms hospitals, how should you ration care? Whose lives should be saved first?

For the past several years, Dr. Lee Daugherty Biddison, a critical care physician at Johns Hopkins, and colleagues have led an unusual public debate around Maryland, from Zion Baptist Church in East Baltimore to a wellness center in wealthy Howard County to a hospital on the rural Eastern Shore. Preparing to make recommendations for state officials that could serve as a national model, the researchers heard hundreds of citizens discuss whether a doctor could remove one patient from lifesaving equipment, like a ventilator, to make way for another who might have a better chance of recovering, or take age into consideration in setting priorities.

At that first public forum in 2012 in East Baltimore, Cierra Brown, a former Johns Hopkins Hospital custodian, said she favored a random approach like a lottery. “I don’t think any of us should choose whether a person should live or die,” she said.

Alex Brecht, a youth program developer sitting across from her, said he thought children should be favored over adults. “Just looking at them, seeing their smiles, they have so much potential,” he said.

“Who’s going to raise them?” asked Tiffany Jackson, another participant.

The effort is among the first times, Dr. Daugherty Biddison said, that a state has gathered informed public opinion on these questions before devising policy on them. “I don’t want to be in a position of making these decisions without knowing what you think,” she told the residents. “We as providers,” she said, “don’t want to make those decisions in isolation.”

Rationing already occurs in delivering medical care in the United States, though some practices are little acknowledged. Committees struggle regularly over policies for allocating scarce organs for transplant.

During widespread drug shortages in recent years, doctors have sometimes chosen among cancer patients for proven chemotherapy regimens and among surgical patients for the most effective anesthetics. And doctors sometimes have to choose among patients who need treatment in intensive care units, which are often filled to capacity.

In emergencies, the choices can have immediate life-or-death consequences. After Hurricane Katrina in 2005, doctors made ad hoc decisions about which groups of patients to evacuate from hospitals when floodwaters rose, the power failed and heat climbed. At one medical center, many of the sickest, chosen to go last, died. During the H1N1 influenza pandemic in 2009, thousands of young people developed severe respiratory distress. For some of the most critical cases, doctors tried treatment on heart-lung bypass machines. Rationing took place because the costly and resource-intensive therapy, which doctors were not sure would help, was available in only about 120 hospitals.

Similar scenarios have developed in other countries, wealthy and poor. After the 2011 earthquake and nuclear disaster in Fukushima, Japan, some patients at nearby hospitals, including babies, were selected for flights to safety, while others languished for days as medical supplies dwindled. At one hospital, dozens of older patients were apparently abandoned, according to a report in The Lancet, and many died.

And during the 2014 Ebola epidemic in West Africa, when doctors and nurses could spend only so many minutes inside hot biohazard suits, they struggled with impossible choices over which patients to give care.

Dr. Daugherty Biddison, a vice chairwoman in the department of medicine at Johns Hopkins, said she had first encountered scarce medical resources while doing missionary work overseas. She realized that even Johns Hopkins Hospital, a 1,145-bed facility anchoring the $7.7 billion Johns Hopkins Medicine enterprise, would fail to meet demand in a severe pandemic. When asked to help draw up a plan, she said, she felt uncomfortable with health professionals’ making life-or-death judgments without knowing the values of the broader public.

At least 18 states from New York to California, and numerous hospitals, including the 152 medical centers operated by the Department of Veterans Affairs, have already developed protocols. Some efforts,

including Maryland's, have received funding from a federal program supporting hospital preparedness. But relatively few people know about the plans for allocating scarce resources, and fewer still have been consulted.

Some of these guidelines are nuanced and flexible to context. But others call for doctors to categorically refuse hospital admittance to older adults and those with certain existing medical conditions, such as kidney failure or advanced cancer, in a severe pandemic.

In Maryland, participants in the forums, designed with the help of Carnegie Mellon University's program for deliberative democracy, tended to favor saving the most lives or years of life by prioritizing people who were expected to survive their current illness or live the longest after being treated. However, many also said that a lottery or first-come-first-served approach would be appropriate for patients who had roughly equal chances of benefiting.

"If you have one ventilator and five people who are good candidates, there's going to have to be a random sort of chance aspect to it," said Dr. Eric Toner, a senior associate at the UPMC Center for Health Security and one of the project's leaders.

Unexpected questions emerged in the discussions: Should an undocumented immigrant be eligible to get a ventilator? What about a drug or alcohol abuser, or a prisoner? After being told by a facilitator that discrimination would not be allowed, one participant asked whether using age, one of the principles under discussion, would not also be a form of discrimination.

Taking ventilators from patients who did not appear to be improving was "the single most contentious issue," Dr. Toner said. Maryland's attorney general released an opinion in December that lifesaving medical technology, including ventilators, could be removed from patients during a catastrophic emergency and reassigned to others who could potentially benefit more from them. Dr. Toner said it would be hard for any system to work without reallocation.

But at the forums, many expressed reservations. One woman said that she had been in a coma, on a ventilator, and that her family had been encouraged to turn it off and let her die. "Health care providers are not God," another said. "I've seen it firsthand where they thought one thing and the outcome was different."

To avoid rationing, a woman proposed a "Susan G. Komen for disaster preparedness," a reference to the ubiquitous fund-raising movement for a breast cancer cure. Some said they would voluntarily refuse a ventilator to save the lives of other people, such as children or family members. A man questioned whether doctors would even have the time in an emergency to engage in formal rationing. Some with lower incomes said that health care rationing was already occurring based on the ability to pay.

Translating all these ideas into recommendations for the state, most likely in mid-2017, will be challenging. The organizers said that despite the complexity, they were now in a better position to provide the guidelines.

"We have a much fuller appreciation of what the community wants," said Howard Gwon, the director of the office of emergency management at Johns Hopkins Hospital.

Charles Blattberg, a professor of political philosophy at the University of Montreal, said he worried that the effort could result in overly precise guidelines.

"The kind of judgment that's required to arrive at a good decision in these situations needs to be extremely sensitive to the context," he said. "It's not about just abandoning one lone doctor to their own devices to make it up on the spot, but we can't go the other extreme in thinking we have the solution to the puzzle already; just follow these instructions. That works for technical problems. These are moral, political problems."

Ruth Faden, the founder of Johns Hopkins's Berman Institute of Bioethics, which participated in the project, said she saw value in the exercise far beyond a pandemic.

"It's a novel and important attempt," she said, "to turn extremely complicated core ethical considerations into something people can make sense of and struggle with in ordinary language."

ANALYSIS

- **Colorado:** The state is proceeding with a proposal to buy out landslide properties in Colorado Springs as quickly as possible, Colorado Division of Homeland Security and Emergency Management Marilyn Gally told the Colorado Springs city council Monday. The city has proposed a resolution asking FEMA to "move as quickly as possible."… The Beaver Creek Fire that started in June is believed to have been human-caused… A July hailstorm in Colorado Springs is the sixth-most costly disaster in state history, according to the Rocky Mountain Insurance Information Association.
- **Montana:** Several stories report about fires in the state. One near Kalispell led to evacuations, one in Yellowstone has made national news, and the Copper King Fire remains dangerous.
- **North Dakota:** Stories appear to reflect more tension at the site of the pipeline protest: Homeland Security Division Director Greg Wilz withdrew trailers and water tanks that had been supplied by the state after reports of criminal activity, including lasers being directed at pilots observing the protest; Governor Dalyrmple said numerous criminal acts had occurred and asked the Army Corps of Engineers to step in (as the protest is on its land, protesting its permit); and tribal officials acknowledged the campers had split into two factions, one pacifist and one that feels "something should be done."… Also: Three Affiliated Tribes approved a letter of support for the protest. About 60 tribes are believed to be represented at the campsite. A federal judge is to rule on a request for an injunction Wednesday. The Morton County sheriff estimates overtime costs for law enforcement may be $100,000 per week. Protesters plan a march at 2 p.m. today and to attend a Morton County Commissioners meeting at 5:30; two actresses will lead a protest outside the federal district court in Washington, D.C., today as well. Former *Grand Forks Herald* editor Mike Jacobs weighs in with an opinion piece on the protest … Xcel Energy is testing large drones that could be used to help identify power problems after a storm…
- **South Dakota:** The state has its first Zika case, a woman who had travelled to the Caribbean. (She is not pregnant.)
- **Utah:** Two new wildfires have broken out. Red flag warnings are out for the northern part of the state, and storms are expected in the south.
- **Other FEMA-related stories**: The Louisiana flooding, wildfires and the Zika virus continue to dominate national disaster news. No clips are included today.

COLORADO

On Unsolid Ground: State hustling to help Colorado Springs landslide victims (Colorado Springs Gazette)

By: Billie Stanton Anleu
August 22, 2016• Updated: August 22, 2016 at 6:23 pm

Colorado government is moving as quickly as it can to help Colorado Springs landslide victims, state Emergency Management Director Marilyn Galley assured the City Council during its work session Monday.

But Galley said her agency is completing buyouts of Boulder County homes from the 2013 floods, an indication of the two to three years needed to close out relief efforts after disasters.

"It is a tedious process," Galley said.

The state has submitted Colorado Springs' application to the Federal Emergency Management Agency, she said.

Mayor John Suthers and Councilman Keith King are sponsoring a resolution urging FEMA to "proceed as quickly as possible" in moving forward on the Hazard Mitigation Grant Program application. The resolution promises the council, mayor and city staff members' "full and timely attention" in cooperating with FEMA and the state Office of Homeland Security and Emergency Management.

The costs from the 2015 landslides are high, noted city Grants Manager Jen Vance.

When 27 homes were bought out in 2000 after landslides in Holland Park and on Regency Drive, the total project cost was $6.5 million.

But the 26 homes to be bought out because of last year's landslides have a projected cost of $16.2 million, because the cost of housing has increased, several of the houses are in Broadmoor neighborhoods and $1.9 million alone is attributed to a landslide lot owned by Judy Myklak in the Broadmoor Resort Community.

Meanwhile, Councilmen Don Knight and Tom Strand plan another workshop Monday with developers, builders, geologists and geotechnical engineers, among others, to resolve lingering questions on their proposed rewrite of the city's geological hazards ordinance.

Knight had noted holes in that safety net and wants more due diligence before homes are erected in landslide zones.

Planning and Development Director Peter Wysocki said questions to be resolved are:

- Who proposes and signs off on the geological hazard study?

- Is 14 days enough time for the Colorado Geological Survey to respond on how its recommendations have been implemented in development plans?

- Who verifies that those recommendations are addressed?

The original 1996 geohazards ordinance called for either a geologist or geotechnical engineer to write the studies, Knight noted, but both specialists are needed.

"The biggest issue," he said, "is who certifies that the house was built as designed. There's no guarantee your house isn't going to fall down into a landslide. All we're trying to do is make sure the house is built as designed."

Officials say Beaver Creek fire was caused by humans as crews continue to battle blaze (Denver Post)

The Denver Post

By Jesse Paul | jpaul@denverpost.com
August 23, 2016 at 9:03 am

WALDEN — Officials believe the Beaver Creek fire burning in northwest Colorado since June was caused by humans.

In an incident update Monday, commanders made the announcement, which they have been suggesting since the fire started on June 19. The U.S. Forest Service's law enforcement division is investigating.

The fire, which has scorched more than 37,000 acres in Colorado and Wyoming, is listed as 53 percent contained. Nearly 250 firefighters were assigned to the firefight about 25 miles north of Walden as of Tuesday morning.

"Cooler weather later in the week is predicted to be even more favorable to suppression and containment efforts," officials said in a Tuesday news release.

Total containment is expected Oct. 21. The fire has destroyed one cabin and a handful of outbuildings.

July hail storm in Colorado Springs sixth-most damaging in state history (The Colorado Springs Gazette)

By: Wayne Heilman

August 22, 2016 Updated: Today at 6:12 am The July 28 hailstorm that smashed Colorado Springs was the sixth-most damaging event in Colorado history, triggering $352.8 million in claims for damage to homes and vehicles, an insurance industry trade group said Monday.

Described as an "absolute hail bomb" by Brian Bledsoe, chief meteorologist with Gazette news partner KKTV, the Rocky Mountain Insurance Information Association said the storm featuring up to tennis ball-sized hail resulted in 84,500 auto and homeowner insurance claims filed so far. That includes 51,300 auto insurance claims adding up to more than $164.6 million and 33,200 property insurance claims at more than $188.2 million.

"The difference between this storm and many of the other large storms that have hit Colorado is you typically see one storm travel across the state or along the Front Range causing damage over a wide area," said Carole Walker, the association's executive director. "This storm was concentrated in the Colorado Springs area and the size of the hail resulted in a very high percentage of claims that were total losses."

Renee Larson, a semi-retired homeowner near the Colorado Springs Airport, said the storm did about $60,000 damage to her family's three vehicles as well as the roof, six windows, skylights,

chimney, siding, fence and shed on or near their home. The vehicles were total losses and she hopes repairs to her home will soon be approved by her mortgage company.

"Hopefully, they will get it done before the snow flies," Larson said. "You want to scream and throw your hands up, but it is Mother Nature, just like the floods in Louisiana. We are fortunate it is going as smoothly as it is. At least we are in the process of our claim. Some people I know might have to wait months to see an adjuster."

The estimated damage amount is preliminary and doesn't include any damage to commercial property such as vehicles of dealer lots or office buildings and hotels, or public property, including at least $500,000 in damage at the Colorado Springs Airport and about 40 Colorado Springs police cars as well as damages at Peterson Air Force Base. The total cost of the storm likely will increase as repairs are completed to roofs, siding and windows damaged by the storm that could take months to complete, Walker said.

"This is yet another reminder from Mother Nature of why Colorado is now ranked second in the nation for hail insurance claims," Walker said. "The size and amount of hail that battered Colorado Springs is, unfortunately, part of a pattern of catastrophic events the state has been experiencing during the past several years, so we need to be financially prepared for the unexpected."

The monetary damage of the storm ranks behind three hail storms, the Waldo Canyon and Black Forest fires, the association reported. The storms ahead of it are:

- A July 20, 2009, Denver area hail storm that caused $767.6 million in damages;

- A July 11, 1990, hail storm that caused $625 million in damages statewide;

- The June 2012 Waldo Canyon fire, which resulted in $453.7 million in claims;

- The June 2013 Black Forest fire, which resulted in $420.5 million in claims;

- A series of storms from June 6-15, 2009, in the Denver area with tornado and hail damage totaling $353.3 million.

When adjusted for inflation, the storm ranks as the eighth-worst in the state's history.

Colorado ranked behind Texas in hail claims from 2013-15 with 182,591 claims, according to a National Insurance Crime Bureau report in May. Nationwide, there were 5,412 major hail storms last year, according to the National Oceanic and Atmospheric Administration Severe Storms database.

Claims related to wind and hail damage accounted for nearly 40 percent of all insured losses during the past five years, averaging about $15 billion annually, the association said. The July 28 storm was the first catastrophic loss of the year in Colorado, which the association defines as insured damage of $25 million or more (flood damage is not included because it isn't covered by most homeowner's insurance policies).

Many of the state's top insurers, including USAA and State Farm, opened mobile locations along Powers Boulevard and elsewhere in eastern Colorado Springs to handle the large number of vehicle claims. Some body shops reported backlogs of work through December and the wait for getting roof or siding work could be even longer.

MONTANA

Evacuations ordered after Montana fire doubles in size (Associated Press)

KALISPELL — Authorities say homes in a rural area east of Thompson Falls have been evacuated after a wildfire in northwestern Montana doubled in size in one day.

Fire officials say extreme fire behavior is also expected for the Copper King Fire on Monday, with wind gusts of up to 40 mph forecast to blow across the dry, hot terrain.

The Sanders County Sheriff's Office issued evacuation orders early Monday along Little Thompson River Road. Some 20 homes and structures are threatened, and other residents have been put on notice that the evacuation area may spread.

A shelter has been set up at Thompson Falls High School.

Some 317 firefighters are responding to the blaze, which grew 4 ½ square miles Sunday to nearly 11 square miles as of Monday morning.

Wildfire smoke streaming across Montana (KXLH – Great Falls)

By: Julianne Dellorso and David Sherman - MTN News

GREAT FALLS - Many people have noticed a lot of smoke in areas of western, central, and northern Montana.
We have received reports of heavy smoke from residents in and around Helena, Shelby, Heart Butte, and even the Sluice Boxes area of the Little Belt Mountains.

Toole County Sheriff Donna Whitt says from what she’s heard, it is smoke from the fires in Western Montana and Idaho.

She says there are no fires or incidents involving smoke in Toole County reported to her office.

The East Glacier Volunteer Fire Department posted the following message on Facebook on Monday morning: "Very windy, smokey day in East Glacier Park. Conditions are ripe for wildfire - a red flag day. Be careful with cigarettes and avoid any outdoor burning or anything that might spark a fire, like driving your car in high, dry grass or using a chainsaw."

The Montana Department of Environmental Quality reports that wildfire smoke in the area is likely due to several large fires to the west:

- The Pioneer Fire near Boise, Idaho, is 87,818 acres and 50% contained with active fire behavior.
- The Copper King Fire in northwest Montana is 3,900 acres and 30% contained with active fire behavior. Satellite imagery indicates a plume coming off the fire this afternoon and heading to the northeast.
- The Buck Creek Fire in central Washington is 1,083 acres and 0% contained with active fire behavior and contributing to the light smoke over Montana.

West Yellowstone residents voice concerns over Tatanka Complex (KTVM – NBC Bozeman)

By: Judith Retana

Posted: Aug 22, 2016 10:59 PM MDT

Updated: Aug 22, 2016 10:59 PM MDT

BOZEMAN, Mont. - The half dozen fires burning in Yellowstone National Park are now called the Tatanka Complex.

Fire officials in West Yellowstone held a community meeting Monday night where residents voiced their concerns about the fire. As black smoke continues to rise from the fires, many residents are worried.

"Oh, I'm saying my prayers like crazy," said Duck Creek resident Jim Criner. He was one of more than 200 residents at a community meeting to learn more about the fire.

Officials presented maps showing people where the fire perimeter was and the direction it's heading.

Strong winds and dry weather have a Montana senator and firefighters on alert.

"We want to make sure we have all the resources to ensure the community stays safe, the road stays open and we can protect these very important assets here around West Yellowstone," said Sen. Steve Daines (R-Montana).

Officials handed out fact sheets and maps to help residents understand more about the fires. They even handed out fire action plans to help them plan for an emergency.

Sasha Jevtich is a seasonal resident who works closely with the fire community. He and others looked at maps of the fire after the meeting.

"We took a ride into the park just to check things out for ourselves. You know, as you look at the maps, it is kind of scary. It does looks like it's rather close to town," he said. As scary as it can look, he said having the fire eat away at what is fueling it now, is good for the future.

Even so, the fire still makes residents like Criner nervous. He was around for the 1988 fires and saw how close those got to his neighborhood.

"The area between where the fire is and where we are in Duck Creek, is nothing but high grass and willows. The fire would move across the area really fast if it reached us," he said.

Although many in West Yellowstone are used to Montana's fire season, seeing dark plumes just a few miles away is always a concern.

Residents who wish to receive emergency notifications about the fire or any other event in the area, can sign up at ready.gallatin.com.

NORTH DAKOTA

As pipeline protest grows, state pulls water tanks (Fargo Forum)

By Mike Nowatzki on Aug 22, 2016 at 8:24 p.m.

NEAR CANNON BALL, N.D. – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 2,000 and 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

"People are getting overheated now already," Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline's river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe's request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the Corps of Engineers as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don't have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, "I think they have to step up and take some responsibility, as well."

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

"At this point, there is not a permit, but it is my understanding they are requesting a permit," which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

"We want to make sure that things are handled peaceably," she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff's Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

"I've been getting notifications from tribes all over the country that have caravans in route, so it's continuing to grow," he said.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff's Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

"He'd like to keep this in the law enforcement arena," he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there's an element of "outside agitators" responsible for vandalism, trespassing on private property and blocking the highway – "hundreds of criminal acts."

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said "nothing bad is happening here."

Still, protesters acknowledged the camp has split into two factions.

"You have the pacifists and then you have the people who feel something should be done, and they're camped across the river from each other," said Jesse Stevens, 32, a member of Wisconsin's Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the "peaceful" side, Stevens said he felt like he should be across the river.

"My point in coming out here was some kind of action, regardless of whether it's life-threatening or not," he said. "This is our land, our people."

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming's Wind River Reservation, said she was a little concerned about her children's safety at the campsite. But she added, "I believe there's strength in prayer," and said it's a once-in-a-lifetime opportunity.

“Our water is sacred,” she said. “I want to make a difference, and I want them to know they can make a difference, too.”

Three Affiliated Tribes joins support for pipeline protest (Bismarck Tribune)

LAUREN DONOVAN Bismarck Tribune

The Standing Rock Sioux Tribe got support from oil-rich Fort Berthold Indian Reservation Monday as it awaits a potential bench ruling on an injunction stopping Dakota Access Pipeline construction near the reservation.

Three Affiliated Tribes’ chairman Mark Fox issued a formal letter of support for Standing Rock’s opposition.

“We…share the firm belief that Dakota Access should find an alternative means and method of transporting oil to market that has less potential for negative impact to Standing Rock and the lands we have historically shared with a fellow nation, friends and relatives,” Fox said.

Fox was not available for questions after issuing the letter on behalf of himself and the tribal council. He said Three Affiliated will continue to provide logistical support and supplies to the protest effort.

Meanwhile, Jan Hasselman, an attorney with EarthJustice who filed the suit on behalf of the tribe, said the federal judge hearing arguments Wednesday for the possible injunction told parties during a status conference that he will try to rule immediately after the hearing, settling in the near term whether pipeline construction will continue at a location just north of the tribe’s reservation boundary.

The location, where the 500,000-barrel Bakken crude line will be drilled under the Missouri River-Lake Oahe near the tribe’s water intake, is under protest by Standing Rock Sioux tribal members and other tribes. After 28 arrests and daily police and protest encounters, the company stopped work there last week pending the hearing.

The tribe wants the court to stop pipeline construction while it determines whether the U.S. Army Corps of Engineers violated the National Historic Preservation Act and other federal laws when it issued water-crossing easements for the pipeline in late July.

It’s estimated some 60 tribes are represented at the protest and tribal leaders say it’s the largest gathering of Native Americans in modern times.

Protest law enforcement costs estimated at $100,000 weekly (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

The Morton County sheriff estimates about $100,000 per week will be spent on overtime costs for law enforcement staffing the Dakota Access Pipeline protest north of the Standing Rock Indian Reservation.

Sheriff Kyle Kirchmeier said the cost per week is based on the current staffing from his department, other aiding county sheriff departments and the North Dakota Highway Patrol.

Law enforcement is manning a concrete barrier on Highway 1806, some 25 miles away from the protest site, to prevent direct traffic flow. Only local traffic is allowed through the barricade and license numbers are taken of anyone wanting to leave the area.

Responders have come from nine county sheriffs departments, two city police departments, 12 state agencies, one EMS and five federal agencies, according to a statement from Kirchmeier.

Gov. Jack Dalrymple issued an emergency declaration Friday to open the door to pay for state agency reimbursements.

The Morton County Commission ratified a declaration Monday allowing the county to use its own emergency funding to pay for overtime for deputies and other law enforcement agencies assisting at the site.

Law enforcement estimates between 500 and 800 protesters were on site Monday morning, compared to estimates of 1,500 to 2,000 last Thursday and Friday.

"It is hard for our people to gauge. This is really just an estimate. We have officers not only at the traffic control point but others that are in the area of the camp site monitoring activity. These numbers are their best assessment," Donnell Preskey, a spokeswoman for the Morton County Sheriff's Department, said in an email.

Protest organizers say there are between 3,000 and 4,000 people on site.

ND pipeline protesters to march across Bismarck bridge; actress to lead ‘solidarity’ rally in D.C. (Forum News Service)

By Forum News Service Today at 10:58 a.m.

BISMARCK – Opponents of a major oil pipeline that would cross the Missouri River a half-mile north of the Standing Rock Sioux Reservation plan to march Tuesday, Aug. 23, across a bridge over the river between Bismarck and Mandan in solidarity with protesters camped out at the Dakota Access Pipeline construction site near Cannon Ball.

The Standing Rock Water Protectors and allies will march peacefully across the Veterans Memorial Bridge at 2 p.m. and will later attend the Morton County Commission meeting at 5:30 p.m. in Mandan to provide public comment on the county’s emergency declaration, a news release stated.

Meanwhile, film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside U.S. District Court

in Washington, D.C., in conjunction with a hearing on the tribe's request for an injunction to halt construction of the 1,172-mile pipeline. Actress Susan Sarandon also will speak at the Washington rally, a news release stated.

The tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline, which will be the largest oil pipeline from western North Dakota's Bakken oil fields, moving 450,000 barrels per day from Stanley to Patoka, Ill. Standing Rock members oppose the Missouri River crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

An estimated 2,000 or more protesters are camped out south of the construction site along Highway 1806 about 45 miles southeast of Mandan. Dakota Access LLC temporarily stopped work at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct, but pipeline construction continues elsewhere along the four-state route.

MIKE JACOBS: Pipeline protest shows new dimension in North Dakota politics (Grand Forks Herald)

By Mike Jacobs Today at 6:00 a.m.

North Dakota still responds to an Indian scare. That's one thing we can say about last week's news.

On Friday, Gov. Jack Dalrymple declared a civil emergency in response to a protest against the Dakota Access Pipeline. The pipeline would cross the Missouri River less than a mile from the boundary of the Standing Rock Sioux nation.

Protests last week brought more than 1,000 people. Arrests were made.

Emergency declarations aren't all that uncommon in North Dakota, but almost all of them address natural disasters. North Dakota knows natural disaster. Hardly a year goes by without natural disaster. This place is flood prone, snow blasted and wind battered.

Civil disturbance is another thing.

The last civil emergency that comes to mind occurred in 1970, when Gov. William Guy sent the National Guard to an anti-war protest at the ABM missile site near Nekoma, N.D. A year before that, Guy called out the Guard when a bunch of college students descended on Zap, N.D., with the express purpose of getting drunk and having a good time. Some damage was done.

Dalrymple didn't send the Guard to the mouth of the Cannonball River. His emergency declaration is just in case local law enforcement needs help, he said.

Besides pointing out that this step is extremely rare, we can say some other things about it.

One is that Native opposition to pipeline projects is becoming a pattern. The Enbridge Company's Sandpiper line is stalled due to opposition from Minnesota's White Earth Band of

Ojibway. Their spokeswoman is Winona LaDuke, who was Ralph Nader's running mate in 1996 and 2000 when he was the Green Party candidate for president.

The partnership between Native people and environmentalists is part of the pattern. We saw this in opposition to the Keystone XL Pipeline, and it's evident at the mouth of the Cannonball. The protest there has drawn movie stars as well as environmental activists.

That pretty much makes it the current front line in the war on fossil fuels.

It's easy to suggest (as some bloggers have done) that the tribe is being used.

There are two problems with this. For one thing, it's condescending. For another, it overlooks the growing activism of North Dakota's Native people.

This activism is especially evident at Standing Rock.

Opposition from the elected Tribal Council at Standing Rock doomed UND's nickname and logo. The NCAA said using "Fighting Sioux" would be OK if both of the state's Sioux communities said so. Standing Rock refused.

Another thing to say is that David Archambault, Standing Rock's tribal chair, has warrior blood in his veins. He's been on the front lines at the protest. On the pipeline issue, he's led the tribe to federal court and to the United Nations.

This is no surprise. At the opening of the 2015 legislative session, Archambault delivered the "State of the Relationship" message, a cry from the heart in which he spoke truth to power about Native issues and state jurisdiction.

Then there's the political context.

North Dakota's November ballot has three Native candidates: Chase Iron Eyes for Congress, Marlo Hunte-Beaubrun for Public Service Commission and Ruth Buffalo for insurance commissioner. All are Democrats, and none has much of a chance.

But each of them stepped up to fill slots on a major party ticket.

This has two important implications. First, as major party candidates, they will have media access. Second, they've established that the Democratic Party in the state can't just count on Native voters; it must also promote Native candidates to the white population.

It's also the essence of political organizing, as Mark Trahant pointed out in his blog, at trahantreports.com. Trahant is the nation's best known native journalist, a finalist for the Pulitzer Prize for national reporting and a member of the faculty at UND's Program in Communication.

None of this goes to the question of pipeline safety, much less to the future of fossil fuel development.

On these issues, everybody ought to be heard.

So there is one more thing, at least, to say about last week's developments.

Brian Kalk, one of three members of the Public Service Commission that approved a permit for the Dakota Access Pipeline, dismissed the protest. He told the Bismarck Tribune, "These groups didn't come to our hearings."

Well...

They could have been asked.

That's what "public service" means.

Disclaimers: Enbridge has right-of way on property that my partner Suezette and I own in Mountrail County, N.D. I was at Nekoma with the protesters. I was not at the so-called "Zip to Zap."

North Dakota Tests Drones To Be Used For Disaster Response (AP)

HILLSBORO, N.D. (AP) — A 20-foot-long drone that was brought to North Dakota to test precision agriculture methods is now part of a trial run to see if can help crews restore power to areas hit by natural disasters.

The Israeli-manufactured Elbit Systems Hermes 450 aircraft can cover 40,000 acres in an hour and fly up to 17 hours before refueling. Officials involved in the Xcel Energy test program say the larger drone's ability to cover more ground, collect more data and fly at night is expected to help the company move crews, materials and equipment quickly and safely.

"When you have a storm, when you have fires, getting crews on the ground to identify damage is flat-out dangerous," Raanan Horowitz, president and CEO of Elbit Systems of America, said Monday when the drone was shown off to public officials at an airport in Hillsboro, about 35 miles north of Fargo.

One of the tests involves a mock disaster using power poles placed in ditches in and around the nearby city of Mayville. Preliminary reports show that the drone is effective in quickly locating the downed poles both day and night, Xcel Energy Vice President Laura McCarten said.

"Apparently those wood poles stay warmer than the surroundings, so the infrared technology is able to spot them at night," she said.

Xcel Energy is headquartered in Minneapolis and serves customers in North Dakota, Minnesota, South Dakota, Wisconsin, Colorado, Michigan, Texas and New Mexico.

There are still key issues to be ironed out before the drones can be used on a widespread commercial basis, including Federal Aviation Administration approval to operate beyond line of sight, or without the use of a chase plane keeping tabs on the planes. North Dakota Sen. John Hoeven said he hopes North Dakota will be flying drones without chase planes by the end of the year.

"You're covering such big distances. You're losing the utility of the unmanned aircraft if you have to have a chase plane," Hoeven said.

Minnesota Rep. Collin Peterson, whose district borders North Dakota, said the FFA "didn't do too bad of a job" on regulations for small drones, but he expects a much stiffer challenge on rules for larger aircraft.

"The FAA is very slow moving bureaucracy, to say the least," Peterson said.

If larger unmanned aircraft are approved for beyond-line-of-sight operations, Horowitz said the quadcopters and drones that weigh less than 55 pounds would still be used in a complementary role.

"The bottom line is, when you look at the size and the areas that you are trying to cover, when you look at the resolution, when you look at using sensors that can yield data that is actually usable, this is the way to go," Horowitz said of the Hermes drone.

Elbit Systems and Xcel Energy have combined to contribute about $500,000 into flying the Hermes drone. McCarten said the agriculture test program that began in May provided a "ready-made platform" for the Xcel study.

North Dakota State University researcher John Nowatzki said the agriculture test has yielded impressive results on the drone's ability to capture images. Nowatzki has displayed pictures of a shelter belt taken from 4,000, 6,000 and 8,000 feet, with no discernable difference to the human eye.

"The key message here, maybe, is that we get high resolutions at all levels," he said.

Sarah Lovas, an area farmer and crop consultant, said some of her cohorts still want to find out how they can manage the data in an affordable way, but most have embraced the technology.

"There's just no such thing as a dumb farmer anymore," she said.

SOUTH DAKOTA

South Dakota reports first Zika virus infection (Rapid City Journal)

Journal staff
Rapid City Journal
Aug. 22, 2016

South Dakota has reported its first Zika virus infection, according to state health officials.

The infected person is a woman who traveled to a country in the Caribbean where Zika virus is transmitted. She later developed symptoms, the Department of Health said today in a press release. The infection was confirmed by the Centers for Disease Control and Prevention.

"This is a good reminder for anyone who travels to Zika-affected areas that it's important to protect themselves from mosquito bites," Dr. Lon Kightlinger, state epidemiologist for the department, said in the release.

Kightlinger said state officials are not disclosing where the woman infected is from in South Dakota, but did note that she is in her 30s and is not pregnant.

Zika is a tropical mosquito-borne infection. The virus is not known to be carried by the mosquitoes found in South Dakota.

Officials say there are no vaccines or treatment for the virus. To avoid infection, travelers to Zika-affected areas, particularly pregnant women, should follow strict mosquito control precautions — wear pants and long-sleeved shirts, use an EPA-registered insect repellent and ensure that windows and doors have intact screens.

According to the Department of Health, the infection is mild for most healthy adults. About one in five people who are infected will become ill.

The release says symptoms typically occur two to seven days after a bite and include fever, muscle or eye pain and a rash. Pregnant women who are infected run the added risk of having babies with the birth defect microcephaly. Microcephaly means the babies have heads smaller than expected and often have smaller brains that might not have developed properly, the department said.

UTAH

Crews battling new wildfires in northern, central Utah (Salt Lake Tribune)

By BOB MIMS | The Salt Lake Tribune
First Published 1 hour ago • Updated 1 hour ago

Two new wildfires had ground crews scrambling in Sevier and Cache counties on Tuesday, as fire retardant- and water-laden aircraft swarmed the flames from above.

The Sand Ledges Fire, first spotted on Saturday just west of Richfield along Highway 24, had blackened 3,022 acres and was 27 percent contained as of Tuesday, said Fire Information Officer Shayne Ward.

Believed human-caused, the blaze was consuming dry grass and sage brush, including valued sage grouse habitat, but no structures were threatened and no evacuations had been ordered.

In all, 70 firefighters were working to hem in the Sand Ledges Fire. It was a slow, often frustrating task with gusty winds periodically fanning the flames through the tinder-dry vegetation, Ward said.

Still, crews hoped to have the blaze 100 percent contained sometime Saturday.

What sparked the Peterson Hollow Fire Sunday afternoon was still under investigation, but it had scorched 150 acres on the Uinta-Wasatch-Cache National Forest's Logan Ranger District as of

Tuesday. Fire Information Officer MaryEllen Fitzgerald said it was 5 percent contained, with no estimated time for when crews will completely contain it.

The fire is 23 miles northeast of Logan and just north of the Beaver Mountain Ski Area.

"[The resort] is currently not imminently endangered, but is the most important focus at this time. Structure protection is in place and being ramped up as a precaution," Fitzgerald stated.

The Peterson Hollow Fire is one of five active blazes on the Uinta-Wasatch-Cache National Forest; the other four are being allowed to burn as beneficial to clearing away accumulated undergrowth and dead timber.

About 160 firefighters were battling the blaze, aided by a fleet of air tankers and helicopters. Hot, dry and occasionally windy weather continue to challenge efforts to hem in the flames.

Utah forecast: Midweek weather brings high fire danger north, storms in the south (Salt Lake Tribune)

By BOB MIMS | The Salt Lake Tribune

If Goldilocks grew up to be a meteorologist, she might say of the midweek forecast for the Salt Lake and Tooele valleys, "Ahhh, just right."

If the fabled cabin burglar walked into the forests of the northern Wasatch Front, however, she might toss her porridge and run: from the mountains above Logan stretching south through Salt Lake City and Provo to Nephi, the National Weather Service declared a Red Flag Warning for wildfire danger from noon to 9 p.m. Tuesday.

Potentially too hot, indeed, thanks to low humidity, rain-starved rangelands and forests, and gusty winds.

Southern Utah? Goldilocks might prefer the company of three offended bears, after all. The region expects a cycle of thunderstorms the next several days — and humid, hot weather. High temperatures were forecast to be in the low- to mid-90s Tuesday, Wednesday and Thursday.

No, it will be the balmy weather due in the Salt Lake and Tooele valleys that is best for that post-porridge nap. Sunny to partly cloudy skies will reign through the midweek, with highs ranging from the mid- to upper-80s Tuesday through Thursday, and overnight temperatures in the upper-50s to low-60s making for sweet dreams.

ANALYSIS

- **Colorado:** A rechanneling project through the Garden of the Gods is expected to remove 100 properties from the floodplain… The Colorado Springs Independent interviewed the three colleges in the area about their plans for dealing with disasters, including an active shooter…. Bridges on a county road near the Hayden Pass Fire burn scar were taken out by flooding… The *Denver Post* explains why Colorado mosquitos are not likely to carry the Zika virus.
- **Montana:** An extraordinary outbreak of a parasite killing whitefish caused the state to shut down 180 miles of the Yellowstone River to all recreational uses.
- **North Dakota:** More stories report on the pipeline protest, including one in the *NY Times*: Homeland Security Division Director Greg Wilz explains the decision to withdraw state-owned resources was because the situation is not an emergency, the protestors are not on state-owned land, plus reports of criminal activity. Water has been supplied by the tribe's road department. Protestors marched over a bridge peacefully and staying on walkways. About 30 people attended a meeting of the Mandan county commissioners; all those who spoke opposed the pipeline, and many spoke against the traffic barrier set up by law enforcement, saying it hurts local businesses and farmers, is humiliating, and prevents people from seeing the protest. Commissioners said the decision was by law enforcement and is not theirs to overturn. The tribe says a leak at the pipeline could contaminate its water supply and sacred sites. The company says construction has only stopped at this one mile of the 1,172 mile pipeline, which would be the largest source for moving Bakken crude oil. Four unions wrote to Governor Dalrymple asking that he make it safe for construction workers to do their jobs. A federal judge is expected to rule today on a request for an injunction to halt the project. Tribal leaders say they will remain peaceful, but will blockade if the ruling goes against them. So far, there have been 29 arrests for trespassing or disorderly conduct.
- **South Dakota:** A $1 million FEMA SAFER g rant will pay for nine new firefighters in Rapid City for two years… A new wildfire broke out near Angostura Reservoir.
- **Utah:** An attempt to upgrade the Tibble Fork Dam has resulted in lake sediments being released over the weekend that have contaminated the American Fork River, apparently with toxic mine waste. Environmentalists fear an ecological disaster. The presence of toxic sediments had led to an earlier decision to upgrade the dam rather than dredge the lake – but draining the lake to work on the dam appears to have done the damage.
- **Wyoming:** Several fires were burning in the area of Yellowstone National Park, though all roads within the park remained open. One fire south of the park blocked access to that entrance. The fires were caused naturally and were not being actively suppressed.
- **Other FEMA-related stories**: *USA Today* reports on possible hurricanes developing in the Atlantic. … *Inside Radio* says the Louisiana floods show the need to activate FM radio chips in cellphones, which do not work when cell towers are down.

Flood project through Garden of the Gods will reroute Colorado Springs floodplain (The Colorado Springs Gazette)

By: Matt Steiner

Two years after city officials teamed with residents of a West Side Colorado Springs neighborhood to plan flood mitigation and reconstruction of Camp Creek, a project to remove more than 100 properties from the floodplain is about to begin.

On Monday, crews could begin the first phase of the more than $30 million project rebuilding about 5,100 feet of channel through Garden of the Gods Park and the Rock Ledge Ranch.

The work could be potentially lifesaving for residents of the Pleasant Valley neighborhood when heavy rains pound the Waldo Canyon fire burn area in the mountains to the west.

"As a community, we can't let our guard down," said Colorado Springs Emergency Manager Bret Waters. "Even though we're seeing some growth, it doesn't mean the risk will go away."

The Camp Creek mitigation project discussed in the spring of 2014 attracted more than 100 residents who helped choose project priorities. The result was a total rebuild of the deteriorating concrete channel through Pleasant Valley, meaning the creek along 31st Street will be refurbished with grass, shrubs, rocks and a relocated bike path.

But first, the work upstream must be done.

"Reducing the flows (through Garden of the Gods) will allow us to build the rest of the project," said project engineer Mike Chaves.

Construction crews will first install a series of rock steps in the creek, reshape banks and plant vegetation near the channel through the ranch and the park. The cross vanes, Chaves said, are intended to slow water and debris. Erosion has been accelerating each year because of floodwaters pouring off the Waldo Canyon burn scar.

The channel stabilization will cost $1.1 million, said city spokeswoman Kim Melchor. Almost $800,000 of that comes from a Natural Resources Conservation Service grant with the rest of the money coming from the city.

That work will likely be followed by construction of a large sediment detention pond at the north end of the park in early 2017, Chaves said.

That phase will cost almost $8 million, Melchor said. It will include a large berm stretching from 30th Street to the hills in the park that can dam floodwaters.

When the entire project is complete, more than 200 Pleasant Valley residents will no longer be in the floodplain.

"The whole intent is to protect the park, protect Rock Ledge Ranch and the downstream communities," Melchor said.

Colleges and universities put emphasis on planning for disasters, including active shooters: Planning for the worst (Colorado Springs Independent)

By J. Adrian Stanley @JAdrianStanley1

On April 16, 2007, Seung-Hui Cho, a senior at Virginia Tech, killed 32 people and wounded another 17 in two separate shootings.

Until June of this year, when Omar Mateen killed 49 people and wounded 53 others in Orlando's Pulse nightclub, the Virginia Tech shooting was the deadliest by a single perpetrator in U.S. history.

Virginia Tech held sway over the country, leading to widespread grief and fear, changing gun laws, prompting deeper discussions on mental illness and leading many colleges and universities to take a second look at their emergency plans.

Back in 2007, institutions of higher education tended to have procedures for protecting their campus communities from natural disasters like fires, tornadoes, floods and earthquakes, and often some man-made accidents as well, like chemical spills. But most had dedicated less — or no — energy to drafting plans to deal with an active shooter rampaging through the campus.

That changed after Virginia Tech. Just as "duck and cover" was a part of common school instruction during the Cold War, in today's age of mass shootings, students now learn to "run, hide, fight."

What Cho did was an eyeopener for school leaders. The gunman, who had known mental health issues, fatally shot two students in a residence hall, walked away, changed his clothes, and ran errands, then calmly entered an academic hall. At some point, he chained shut the exits.

Police were dealing with the first shooting while Cho entered Norris Hall. The university, suspecting the first shooting was of a personal nature, hadn't instructed students, faculty and staff to prepare for an active shooter. In fact, students in Norris reported being simply curious when Cho peeked his head inside their classroom doors before beginning his massacre.

Once the shooting was underway, Cho's victims were largely at a loss to stop his killing spree. Some died trying to hold classroom doors closed, including Professor Liviu Librescu, an Israeli Holocaust survivor, whose body was riddled with bullets as he held his classroom door shut, allowing his students to climb out windows. All but one of the students in Room 204 survived due to his heroism.

Nevertheless, 30 people died in Norris Hall. Cho shot himself before police located him.

"A lot of the [college and university] emergency plans really stepped up after 9/11," UCCS Police Lt. Marc Pino says. "Using common terminology, working on regional resources, things like that — that sort of were identified as issues after 9/11 for responding to emergencies — I would say around that time is when we really stepped things up."

But asked when UCCS began preparing for an active-shooter scenario, Pino says, "Virginia Tech would be when we really started doing emphasis on active shooter, and also our campus developed a student response team as a response.

"Numerous people at Virginia Tech had dealings with the shooter, and no one was really talking together to find out that some larger issues were going on. So, the [UCCS] student response team was [formed] — very shortly after Virginia Tech — [and it] comprises the dean of students office, the chief of police and the head of the counseling center. We sort of field reports from faculty, staff, students, anybody that has a concern about a student. We can sort of reach them before it gets to a critical level."

The *Independent* spoke to representatives at UCCS, Colorado College and Pikes Peak Community College about their emergency plans. While plans and strategies differ, each campus has a plan, along with one or more employees in charge of preparing for emergencies.

Of the three schools, Colorado College, which has about 2,000 students, is the only one without its own police force. John Lauer, co-chair of CC's emergency preparedness group and the college's associate vice president for student life, explains that the school does have a single Colorado Springs police officer assigned to the campus, as well as a campus safety department.

The safety officers — who carry no weapons — walk the campus and look for anything unusual. If a situation warrants it, they call police, with whom the college works closely. Campus safety officers can also take anonymous tips.

The campus does have an emergency plan, last updated in 2012, and a director of campus safety and emergency preparedness — Maggie Santos, a former Colorado Springs Police lieutenant. The plan will be updated soon.

"We're always focused on continuous improvement," Lauer says.

But, he adds, the college stresses that every person has to take responsibility for knowing how to respond, saying, "We're as prepared as every individual is prepared."

CC performs regular fire drills and has started doing active-shooter trainings with resident advisors, as well as sessions open to anyone, or upon request. Lauer says it's important not to drill too often because it can desensitize people in a real emergency.

The campus does contract with a company that sends emergency texts, emails and phone calls when needed to students, staff and faculty, as well as anyone else who wants to be notified.

While not every classroom has a locking door, placards by doors give instructions on what to do in an emergency — such as barricade the door for an active shooter or go to the nearest marked shelter in case of tornado.

CC has cameras throughout campus and a loudspeaker on Palmer Hall. Lauer says the campus is considering replacing that speaker, as well as placing speakers on campus security cars for use in an emergency. Staff in residence halls also have megaphones.

Jim Barrentine is chief of police at PPCC, where he says he was hired five years ago to develop an emergency preparedness plan.

That plan is now the template for the state's community colleges.

At first, Barrentine says most folks at PPCC didn't know how to perform basic safety tasks, like using a fire extinguisher or helping a person in a wheelchair down stairs. He's focused on giving trainings and providing instructional videos for different emergency skills. The school also does lockdown drills for an active-shooter situation, as well as special training, and four or five tabletop exercises meant to mimic a real emergency.

Interestingly, of the three schools, PPCC is the only one with locks on all classroom doors. The college encourages locking those doors during class hours.

With three campuses and 20,000 students, PPCC faces unique challenges. The 18-person police department is distributed among the campuses, where they patrol during business hours.

Barrentine has set up a system so that the campus community will be notified of an emergency immediately through texts, emails, landlines and a speaker system throughout the campus. Barrentine wants to add light boards for the deaf and buzzers for the blind, to ensure they are notified, and he's working on implementing a buddy system to ensure people with disabilities are cared for in an emergency.

He also has hotlines for anonymous tips.

Barrentine says the statewide system of community colleges is working to improve emergency preparedness. But he says PPCC is lucky because unlike many other schools, police are on the scene here.

"In an active shooter [situation]," he says, "security's going to run like everyone else."

Back in 2012, UCCS' emergency plans were tested. The Waldo Canyon Fire was raging nearby, and the campus suddenly became an unofficial evacuation site.

"We had the Air Force Academy cadets here in 2012, we also housed several hundred evacuees in our campus residence halls," UCCS spokesperson Tom Hutton says. "And then in 2013 [during the Black Forest Fire], we were an official Red Cross evacuation site and I think we had half a dozen people here, so we had more when we were an unofficial evacuation site."

Since UCCS is located on a wildland-urban interface, it not only has the normal risks of a university with around 11,300 students, but it also must be prepared for wildfire. Because of that, the university has done mitigation along its borders and, in summer months, UCCS police carry fire extinguishers with water in them, better for fighting wildfires. They also patrol the campus borders on off-road motorcycles.

Like the others, UCCS has an emergency notification system that hooks up to cell phones and landlines in classrooms. The university does not have a loudspeaker system or locks on every door, but emergency instructions near doors show how to barricade a door in emergencies and find marked tornado shelters. UCCS conducts general evacuation drills.

The UCCS police department, which has 21 officers and patrols the campus 24/7, has an intergovernmental agreement with Colorado Springs police to help each other in emergencies with set enforcement boundaries. Many will remember that UCCS Officer Garrett Swasey was killed last November when he responded to a mass shooting at Planned Parenthood. Just as he responded, CSPD would provide backup to UCCS officers in case of an active shooter on campus.

UCCS police do take tips (though anonymous tips must be made online) and say students are vigilant about filing reports of anything suspicious. Police Lt. Pino says he'll often get several calls within a few minutes about an unattended backpack, for instance. That's important, because it means students spot unusual circumstances and take them seriously.

"The reason why we have a very safe campus," he says, "is because we get those reports."

UCCS has emergency phones throughout campus, and police offer free escorts — no questions asked — to anyone requesting them. UCCS staff say they plan for any emergencies, and the university has an emergency manager and several offices that deal with emergency planning, including conducting regular tabletop exercises.

"I think we have a culture of working together as a university," Dean of Students Steve Linhart says, "whatever the situation."

County Road 40 bridges washed out by flash floods (KOAA TV, Colorado Springs)

Updated: Aug 23, 2016 10:00 PM MDT
FREMONT COUNTY - County Road 40 is closed after flash flooding in the area of the Hayden Pass Fire burn scar, according to Fremont County Sheriff's Office.

The dam on County Road 40 is holding, but Butter Creek and Little Cottonwood Creek are flowing heavy with debris. All homes are intact and all residents in the area are safe.

A reverse 911 notification was sent to residents in the area of the Hayden Pass Fire burn scar for a flash flood warning Tuesday evening. The warning was in effect until 9:45 p.m.

Bridges on County Road 40 were washed out by flood water. Fremont Search and Rescue and Fremont Incident Management Team responded as a precaution.

Why Colorado's Mosquitoes Are Not Likely To Spread Zika (Denver Post)

By John Ingold

Denver Post, August 23, 2016

It was an experiment that was part "Outbreak" and part "Trading Places," but researchers at Colorado State University hoped it might answer one of the more pressing public health questions facing the state: Could the Zika virus spread here?

The conventional wisdom was that it couldn't, at least not widely, because the disease's primary vector — a ninja of a mosquito called Aedes aegypti — had no established population in the state. But no one had proved that conventional wisdom true. What if it was wrong? What if the local mosquitoes — particularly those in the Culex genus that already carry the West Nile virus — were also able to transmit Zika?

The mosquito experts at CSU's Arthropod-borne and Infectious Diseases Laboratory decided to put the conventional wisdom to the test. In their lab, they infected Culex mosquitoes with Zika. And then, for a week as the virus incubated inside their study subjects, they held their breath.

Finally, the results:

"We could not get that virus to replicate in the mosquito," CSU professor Brian Foy said of the experiment, the topic of a soon-to-be-published article.

Whew.

When it comes to being disease-carrying menaces, not all mosquitoes are created equal, and that explains why Zika is a public health crisis in Miami and a relative public health trifle in Milliken. There are 54 species of mosquitoes commonly found in Colorado, but none of them are known to be able to transmit Zika — even if they can, like the Culex mosquitoes, transmit other diseases.

"It's still kind of a mystery," Foy said. "There's a very fine-tuning match of virus and mosquito."

The reason is that a mosquito's transmission of a disease is not as simple as taking infected blood in from one person and then backwashing it into another. Instead, the virus must be capable of reproducing inside the mosquito and then making its way into the mosquito's saliva — the real source of contamination since mosquitoes digest the blood they consume as food.

"When a mosquito bites a person, it spits into the bite," Foy said.

With the local-born bugs apparently incapable of carrying Zika, then, the only chance of a mosquito-spread outbreak in Colorado comes from a moonshot: the one-in-a-billion possibility that a Zika-capable mosquito that hitchhiked to the state from elsewhere bites into a Zika-infected person who picked up the virus out of state.

So far, only 21 people in Colorado have tested positive for Zika, and all of them contracted the virus somewhere else.

The only instance of a wayward Aedes aegypti being found in the state came in 2010, in Pueblo County. Another species of mosquito possibly capable of transmitting Zika, Aedes albopictus, has been found sporadically in Weld County, most recently in 2011 and most likely was brought to the state in waste tires disposed of here. But those species are just summer tourists; they can't survive the winter.

"Remember we're in Colorado; we're not in the tropics," said Michael "Doc" Weissmann, the chief entomologist at Colorado Mosquito Control, which does monitoring and eradication for local governments.

Weissmann said none of his company's traps have snagged worrisome Aedes mosquitoes this year.

"It's just the same old, same old," he said.

Eric Aakko of the Weld County Health Department said the county's surveillance efforts have found higher-than-normal levels of West Nile-carrying mosquitoes but no Zika concerns.

That leaves only one other prominent way that the virus can spread within Colorado, and it's one Foy knows a little too well. While conducting research in the African nation of Senegal, Foy contracted Zika in 2008. He then came home and accidentally gave it to his wife, which led to a research article hypothesizing — correctly, it turns out — that Zika can spread through sex.

The experience, though, didn't change his mind about the dangers of Zika in Colorado.

"The risk of all of a sudden having a massive outbreak in Denver is, I would say, infinitesimally small," he said. "From mosquitoes, I can't see it happening."

MONTANA

Yellowstone fish-killing parasite is so prolific it's 'shocking' fish to death (Missoulian)

By BRETT FRENCH Billings Gazette

PARADISE VALLEY — A previously unidentified strain of parasite has grown so prolific in the Yellowstone River that it is overwhelming whitefish, killing thousands and prompting the state last week to close more than 180 miles of the river to all recreation.

"The sheer parasite loading itself is almost shocking the fish, that that's what's killing them," said Eileen Ryce, Montana Fish, Wildlife and Parks' hatchery section chief, during a Tuesday press conference along the banks of the Yellowstone River south of Livingston.

Scientists like Ryce believe that the parasite bloom may be so large and unprecedented in part because the Yellowstone River is experiencing near-record low flows and high water temperatures.

"We could see varying responses (of the parasite) depending on which river it gets into," said Travis Horton, Region 3 fisheries manager in Bozeman.

The nearby Madison River, where flows are dam controlled, may be more resilient to the parasite since the water's temperature is cooler, coming from the bottom of Hebgen Lake, and the flows can be maintained at a steadier rate. Likewise, outbreaks of similar parasites in Idaho that killed

whitefish in 2011 and 2012 may have been more limited because some of the streams are dam controlled, Horton said.

The FWP officials spoke to a crowd of about 50 people — anglers, local lawmakers, the media and business owners — at a fishing access site where the stench of dead whitefish rotting on the riverbank wafted through the air.

Media, business owners, anglers and others gather for a press conference on the banks of the Yellowstone River. CASEY PAGE, Gazette Staff

Acknowledging the effect of the river's closure to anglers, floaters and on all of the many businesses that service such recreationists, Gov. Steve Bullock said "the impact goes far beyond the water's edge." Yet he said "science needs to guide this."

"We need to make sure we are not only protecting this watershed and this water but indeed our entire state," he said, noting that the outdoor recreation industry creates about 64,000 jobs and $6 billion in consumer spending annually in Montana.

When Rep. Alan Redfield, R-Livingston, asked why certain portions of the river couldn't be open to fishing to ease some of the impact on local businesses, Horton said FWP hopes to contain the parasite outbreak to the Yellowstone and make its duration short-lived.

"We want to try to minimize this," Horton said. "We don't want to make this situation worse by rushing ahead."

Horton added that when the Yellowstone River's peak water temperatures drop below 55 degrees and stay there, FWP would consider lifting the river closure.

"We're not looking at it being a permanent closure," said Jeff Hagener, FWP director.

He noted the rule to enforce the closure is a temporary emergency closure good for 120 days. After that time the department is forced to re-examine the issue to decide whether the closure should be extended.

The fish kill has been documented by FWP crews from the Yellowstone National Park boundary about 100 miles downstream to just west of the town of Big Timber, Horton said. Other public reports of dead whitefish and suckers downstream from Big Timber to Laurel have not been confirmed by FWP.

The microscopic parasite that infects the fish needs two hosts to complete its life cycle, Ryce explained. It starts in a Bryozoan, a moss animal similar to a freshwater sponge. The Bryozoan releases the parasite that fish absorb through their gills. Similar parasites have caused internal bleeding and kidney failure in whitefish in other outbreaks, such as the ones in Idaho.

But the Yellowstone outbreak is different, Ryce said. There are so many spores being found inside the fish that the scientists are calling it a naive reaction.

"What we mean by that is that the immune response that the fish are expressing would suggest that they have not been exposed to this parasite previously," she said. "That has concerned us since it would suggest it's a new infection. At least we haven't seen anything on this scale previously."

"The other thing that's concerning is from the histology results there were high numbers of parasites seen in multiple tissues. That suggests to us that the infective load that's currently out in the river is very high. Why that's a concern is that the sheer volume of parasites that's out there makes it very easy for the parasite to be spread to other waters."

That's the reason FWP took the unusual step to close down much of the upper river to recreation, Horton said, calling it a "very dramatic step that we took." It's also why the agency is stressing that the best way to fight the spread of the parasite, along with other aquatic invasive species, is to clean, drain and dry all boats and fishing equipment.

FWP crews will continue to search for dead and dying fish in the Yellowstone River and its tributaries like the Stillwater and Boulder rivers to try to determine the extent of the outbreak.

"I hope we can continue to work together, recognizing that the long-term objective is to protect this valley and the river," Gov. Bullock said.

Yet Ryce noted that FWP staff doesn't expect the parasite to disappear, even with colder water temperatures and higher river flows. However, if the fish are given time to adapt they may build up some immunity to the parasite and recover.

NORTH DAKOTA

Occupying the Prairie: Tensions Rise as Tribes Move to Block a Pipeline (NY Times)

By JACK HEALY

August 23, 2016

NEAR CANNON BALL, N.D. — Horseback riders, their faces streaked in yellow and black paint, led the procession out of their tepee-dotted camp. Two hundred people followed, making their daily walk a mile up a rural highway to a patch of prairie grass and excavated dirt that has become a new kind of battlefield, between a pipeline and American Indians who say it will threaten water supplies and sacred lands.

The Texas-based company building the Dakota Access pipeline, Energy Transfer Partners, calls the project a major step toward the United States' weaning itself off foreign oil. The company says the nearly 1,170-mile buried pipeline will infuse millions of dollars into local economies and is safer than trucks and train cars that can topple and spill and crash and burn.

But the people who stood at the gates of a construction site where crews had been building an access road toward the pipeline viewed the project as a wounding intrusion onto lands where generations of their ancestors hunted bison, gathered water and were born and buried, long before treaties and fences stamped a different order onto the Plains.

People have been gathering since April, but as hundreds more poured in over the past two weeks, confrontations began rising among protesters, sheriff's officers and construction workers with the pipeline company. Local officials are struggling to handle hundreds of demonstrators filling the roads to protest and camp out in once-empty grassland about an hour south of Bismarck, the state capital.

More than 20 people have been arrested on charges including disorderly conduct and trespassing onto the construction site. The pipeline company says it was forced to shut down construction this month after protesters threatened its workers and threw bottles and rocks at contractors' vehicles.

Sheriff Kyle Kirchmeier of Morton County, who has led the law enforcement response, said at a news conference that he had received reports of weapons and gunshots around the demonstration, and that protesters were getting ready to throw pipe bombs at a line of officers standing between a rally and the construction site.

Leaders from the Standing Rock Sioux tribe, whose reservation lies just south of the pipeline's path, say the protests are peaceful. Weapons, drugs and alcohol are prohibited from the protest

camp. Children march in the daily demonstrations. The leaders believed the reports of pipe bombs were a misinterpretation of their calls for demonstrators to get out their wooden chanupa pipes — which have deep spiritual importance — and pass them through the crowd.

The conflict may reach a crucial moment on Wednesday in a federal court hearing. The tribe has sued to block the pipeline and plans to ask a judge in Washington to effectively halt construction.

The pipeline runs overwhelmingly along private land, but where it crosses bodies of water, federal rules come into play and federal approvals are required.

The tribe says the pipeline's route under the Missouri River near here could threaten its water supplies if the pipeline leaks or breaks, and it says the United States Army Corps of Engineers failed to do proper cultural and historical reviews before granting federal approvals for the pipeline.

"This is our homeland," said Phyllis Young, a member of the Standing Rock Sioux. "We are Dakota. Dakota means friend or ally. Dakota Access has taken our name."

In legal filings, the corps rejects those claims. It says it consulted extensively with tribes, including the Standing Rock Sioux, and it says that tribe has failed to describe specific cultural sites that would be damaged by the pipeline. Energy Transfer Partners says it has the necessary state and federal permits and hopes to finish construction by the end of the year. The pipeline's route starts in the Bakken oil fields of western North Dakota and ends in Illinois.

With the fate of the land here and this $3.7 billion project in the air, people here have decided to take action. They are occupying the prairie.

Echoing protests against the now-scuttled Keystone XL pipeline, environmental activists and other tribes from the Dakotas, the rest of the Great Plains and the Pacific Northwest have been arriving to camp in the open fields and protest near the parcel where the pipeline company has secured an agreement with the landowner to build.

The protesters sleep in tents and tepees, cook food in open-air kitchens and share stories and strategies around evening campfires. There is even a day care. At morning meetings, speakers warn parents to keep their children away from the Missouri River at sunset, and remind one another they are camped out in prayer.

"It's a major movement in Indian country," said CJ Clifford, a member of the Oglala Lakota, who drove up from the Pine Ridge Reservation in South Dakota. He saw the protests as part of a historical continuum reaching to Little Bighorn. This battle, he said, was being waged peacefully.

For many, the effort was about reclaiming a stake in ancestral lands that had been whittled down since the 1800s, treaty by broken treaty.

“Lands were constantly getting reduced, shaken up,” said Dave Archambault II, the tribal chairman of the Standing Rock Sioux. “I could give you a list of every wrongdoing this government did to our people. All of that is frustration pent up, and it’s being recognized.”

He added, “It’s a tipping point for our nations.”

This month, a line of sheriff’s officers retreated in the face of riders on horseback circling and yipping through the grass. (Tribal members said that the display was a Lakota gesture of introduction, and that they have no quarrel with law enforcement.)

There have been no moves so far to disband the camp or keep people from demonstrating. But Sheriff Kirchmeier told reporters that the demonstration had become an “unlawful protest,” and Gov. Jack Dalrymple, citing “public safety risks,” declared a state of emergency on Friday.

Local law enforcement officers set up a barricade on the main road leading to the pipeline site, and officials here in Morton County called a special meeting on Monday to talk about the traffic and how to handle a hundreds-strong protest that could linger for weeks or months.

At the sprawling campsite down the road from the protest site, there had been portable toilets, 500-gallon tanks of drinking water and an air-conditioned trailer with medical supplies provided by the state. But late Monday night, people at the camp said the medical trailer and water tanks had been removed, leaving them to scramble for a new water source for hundreds of people.

After a prayer ceremony at the construction site one recent afternoon, a few young men on horseback opened the gate and rode onto the land. A few days earlier they might have been arrested and accused of trespassing, but that day there were no officers to stop them.

The pipeline company said that it temporarily stopped work here this month while “law enforcement works to contain the unlawful protests,” but that construction was continuing elsewhere.

Energy Transfer Partners has sued Mr. Archambault and six other people over the protests. In a federal lawsuit filed last week, the company accused them and other protesters of blocking access to the construction site, threatening workers and trespassing onto private land.

Jon Eagle Sr., the historic preservation officer for the Standing Rock Sioux, watched from the side of the road as the young men rode into the grassy field, toward a construction floodlight and heaps of excavated dirt. He did not want the pipeline to breach this land. But he did not seem to approve of this either.

“They need to stay out,” he said. “They don’t know where the burials are. They don’t know where the sacred sites are. I’m trying my best to keep the peace.”

Emergency services recalled from Dakota Access Pipeline protest site (KFYR TV, Bismarck)

By Max Grossfeld |

Posted: Tue 4:19 PM, Aug 23, 2016 |

Updated: Tue 6:24 PM, Aug 23, 2016

BISMARCK, N.D. - Demonstrators protesting construction of the Dakota Access Pipeline had been using state resources at their camp until Monday, when the Department of Emergency Services decided to recall them.

Those resources included a mobile command trailer, a medical aid trailer and a water trailer.

A DES official says Tribal Emergency Management requested the resources, which were supposed to be used on tribal land. He says the services brought the trailers back when he heard the trailers were located on land owned by the Army Corps of Engineers.

Reports of unlawful behavior, he says, also influenced his decision.

"This isn't a flood, a fire, an icestorm. This is an event that originally needed some support for the responders dealing with it and at this stage in the game, the event's not an emergency," says Greg Wilz, Homeland Security Division director.

Wilz says all the equipment is back in Bismarck and ready to use in case of emergency.

People concerned with Highway 1806 barricade ask Morton County Commissioners for answers (KFYR TV, Bismarck)

MANDAN, N.D. - The Morton County Board of Commissioners heard public testimony regarding the Dakota Access Pipeline for nearly in an hour at Tuesday's meeting.

All those who chose to speak during the hearing were in opposition of the Dakota Access Pipeline.

County Commissioners say the purpose of the meeting was to give people the chance to weigh-in on the matter in a peaceful manner.

About a dozen people addressed Morton County Commissioners in front of a packed room Tuesday. The recurring frustration for many: removal of barriers along Highway 1806, which restrict access to areas south of Mandan including Cannon Ball and Fort Yates.

"I didn't appreciate it when they put up that block. I have granddaughters and daughters that work at Fort Yates and live in Bismarck. It's humiliating and intimidating when the cops come

up to your car and look in your car like we are doing something wrong," said a speaker who addressed the Commission.

"I am embarrassed for the law enforcement officers that I meet on the road, blocking people from seeing this protest," said a woman who addressed the Morton County Commission.

Highway 1806 was blocked up last Tuesday past the veteran's cemetery because of public safety concerns, according to the Morton County Sheriff's department. Sheriff Kyle Kirchmeier didn't speak at Tuesday's meeting.

While many spoke out against the traffic interception point, the Board of Commissioners deferred all questions regarding the barricade to law enforcement. The County Commission says they do not have the authority to remove the barricade.

"We thought it was very important to allow these individuals who are protesting to have a voice in a public forum. I think that's very important. As it relates to the traffic control point itself, that is a question that I'll have to refer back to county sheriff, our incident commander Kyle Kirchmeier," said Chairman Cody Schulz, Morton County Board of Commissioners.

Many of those present say they want answers from government officials.

"I don't want any part of it. I don't think that's right. And it's not fair. And that blockade, that should not be there. That's all I have to say," said another speaker.

The Board of Commissioners says they're working toward creating an open and peaceful dialogue with protesters.

Those who spoke against the blockade say not only does it affect commuters driving to work, but it's reduced business for local shops and reduced access to recreation areas.

Both the North Dakota Highway Patrol and North Dakota Department of Transportation have the authority under North Dakota Century Code to close a highway. This decision to temporarily close Highway 1806 was made by DOT and HP August 17.

Pipeline foes take fight to Bismarck, Washington D.C. (Forum News Service)

By Mike Nowatzki on Aug 23, 2016 at 6:38 p.m.

BISMARCK – Waving the flags of their tribes and singing the songs of their ancestors, more than 200 protesters marched across a Missouri River bridge in Bismarck Tuesday ahead of a federal court hearing that will determine the fate of the Dakota Access oil pipeline’s route in North Dakota.

“This water belongs to all of us,” Vic Camp, a 41-year-old from South Dakota’s Pine Ridge Reservation, said as he rallied the crowd before the march. “We all know that tomorrow in Washington they’re going to make a decision that affects every single one of us.”

The march across the 2,370-foot-long Veterans Memorial Bridge aimed to show solidarity with the 2,000-some protesters encamped about 50 miles south on the Standing Rock Sioux Reservation, near the pipeline construction site along State Highway 1806 north of Cannon Ball.

Indeed, many marchers were from the campsite, including 25-year-old Kin-sin-ta Joseph and her 16-year-old sister Kis-dya:n-te' Joseph, who got help from a portable PA system so their river song would carry over the wind and traffic noise. The members of northern California's Hoopa Valley Tribe said their chairman urged members to assist Standing Rock, and about 25 made the trip.

While they've taken part in protests before, joining a blockade against logging companies just a few months ago, the older sister said it's never been this big, with so many tribes involved.

"This is really spectacular," she said. "We've been waiting for this kind of gathering."

The Standing Rock Sioux Tribe, represented by the environmental law group Earthjustice, sued the U.S. Army Corps of Engineers last month over permits issued for the nearly $3.8 billion pipeline. It would cross the Missouri River a half-mile north of the reservation and be the largest oil pipeline from the Bakken oil fields, moving 450,000 barrels per day to Patoka, Ill.

Standing Rock members oppose the river crossing, fearing a pipeline leak would contaminate their water supply and other sacred sites.

Dakota Access LLC temporarily stopped construction at the site last week as protests ramped up, leading to 29 arrests for trespassing or disorderly conduct. But the protest hasn't impacted pipeline construction elsewhere along the four-state route, including in North Dakota, company spokeswoman Lisa Dillinger said via email.

"We have temporarily deferred grading activities across a short section of the right-of-way (less than 1 mile) while law enforcement works to contain the unlawful protests in light of the fact that we have the necessary permits and approvals to work at this site," she said.

A federal judge in Washington, D.C., will consider Wednesday the tribe's request for an injunction that would effectively halt construction of the 1,172-mile pipeline. A lawyer for the tribe said the judge has indicated he will rule from the bench or shortly after the hearing.

Film actress Shailene Woodley, who has been involved with the months-long pipeline protest, will headline a solidarity rally at 1 p.m. Wednesday outside the courthouse in Washington, and actress Susan Sarandon also will speak at the rally, according to a statement.

Protesters on Tuesday blocked traffic only briefly while crossing the street to get to the bridge's pedestrian walkway, and law enforcement reported no problems with the march. Dozens of passing drivers honked their horns in solidarity, though one yelled an expletive aimed at Native Americans.

Camp said protesters will refrain from violence if the judge's ruling doesn't go their way.

“The only way violence will happen is if the cops provoke it and they attack us,” he told Forum News Service, adding, “We have our women and we have our children. We have grandparents here.”

When asked what will happen if the judge denies the injunction and Dakota Access tries to resume construction, Camp said, “Then we’ll start blockading.”

“We’ll do what we can with our bodies to keep the machines from coming in,” he said.

Four labor unions sent Gov. Jack Dalrymple a letter strongly encouraging him to use the power of his office to keep workers safe and ensure protesters are “following the letter of the law.”

The general presidents of the Laborers’ International Union of North America (LIUNA), International Union of Operating Engineers (IUOE), International Brotherhood of Teamsters (IBT), and United Association (UA), said the actions of protesters endanger not only themselves but construction workers and equipment, as well as local law enforcement who’ve bolstered their local presence.

They said the pipeline has created about 4,000 construction jobs in North Dakota along 346 miles of pipeline.

“While they may have a right to protest, we also have a right to do our jobs in a safe environment,” they said.

Protesters, insisting their actions are peaceful, appealed to the United Nations, non-governmental organizations and churches to send observers to the site. They also continued to rail against what they contend is an unnecessarily heavy law enforcement presence, including a checkpoint about six miles south of Mandan that restricts southbound traffic on Highway 1806 to emergency response vehicles and local traffic such as farmers, ranchers and homeowners.

Standing Rock Protestors Find New Resources After State Withdraws Support (KXMB TV, Bismarck)

Published 08/23 2016 04:04PM

Updated 08/23 2016 07:03PM

Protestors of the Dakota Access Pipeline are finding ways to sustain their effort after state officials pulled relief resources from their camp near Cannonball.

Ben Smith has the story.

For nearly a week.

Several state-owned trailers provided water, shelter, and a place to help those sick or hurt.

Monday morning, news came that these resources would soon be gone.

"It was shocking, it was shocking. I didn't expect that,"

"It's a little different now because everything is going to be outdoors where we had the convenience of having everything indoors in case of the rain, weather wind. Resources got taken away from us quick but we got them back," says Joenelle Leingang

As fast as they disappeared, new support came in.

Standing Rock Paramedics erected a tent in which to treat people.

The tribes road department also pitched in, delivering a giant tank of water.

"They keep this full to fill our buffalo tanks with water. We have two, three more possibly coming in from the Cheyenne River who had donated theirs so water supply is going to be back on track again," says Leingang

(Ben Smith, KX News) Not all state-resources have gone. There is one ambulance that is still here, to provide a backup for standing rock paramedics,

"They left the ambulance as an extra resource for us. Because like I said, we still provide services to all the reservation so of course our number of ambulances is limited," says DeAnn Werre, Standing Rock Paramedic

She says it's not your typical day as a Standing Rock paramedic.

"We've been able to bring in extra staff to be able to provide services,"

"We've pulled together and got our resources together and are able to provide the same services for people,"

It seems to be the theme of the effort, pulling together under one cause.

It's very overwhelming, it's great, phone calls, where can I bring it to...

I just would like the public to see for themselves. There is nothing negative going on here at all,

She says for now, this area near the Cannonball river has become a second home.

Protesters attend Morton County Commission meeting (Bismarck Tribune)

CAROLINE GRUESKIN and LEANN ECKROTH Bismarck Tribune

15 hrs ago

The Dakota Access Pipeline protests returned to the Bismarck-Mandan area Tuesday, as protesters walked across the Memorial Bridge and testified before the Morton County Commission.

Several speakers asked the commissioners to remove a roadblock that prevents drivers from traveling south on Highway 1806 from Mandan to the Standing Rock Sioux Reservation, though

commission chairman Cody Schulz said after the meeting the commission does not have authority to remove the block.

Speakers told the commissioners and the approximately 30 people who attended the meeting that the block impedes travel, punishes the tribe's economy and can be humiliating to cross.

The highway has been blocked since Aug. 17, when Morton County Sheriff Kyle Kirchmeier said the protest had become unlawful and the road unsafe, points the protesters have contested throughout the week.

Marilyn Kary, who works in Fort Yates, said the roadblock makes it difficult for teachers on the reservation who commute.

Chase Iron Eyes, the Democratic candidate for North Dakota's lone U.S. House seat, said the roadblock was intended to punish the tribe and has disadvantaged businesses in the region.

He said Native Americans and white North Dakotans tend to live in separate worlds.

"Interactions should be encouraged," he said, suggesting the block did the opposite by preventing commerce.

Cody Hall of Eagle Butte, S.D., spokesman for the Red Warrior Camp, said the blockade simply sets the wrong tone.

"It felt like what black people felt in the South," he told commissioners, adding that he was questioned at the blockade, while a white friend was not.

Clyde Bellecourt, co-founder of the American Indian Movement, asked members of the Morton County Commission to consider what future generations would think if the water were contaminated.

"I'm 80 years old. I've lived my life. I don't want my grandchildren to ever question," he said. "Grandpa, why didn't you say nothing?"

He encouraged the commissioners to visit the protest camps.

"You have nothing to be afraid of," he said.

Earlier on Tuesday, about 200 protesters took their cause to the Memorial Bridge, staging a peaceful march from Bismarck to Mandan.

Banners, bright regalia and flags of many Native American nations were presented as smart phones and a drone documented the latest chapter in the protest.

At the staging area, multiple speakers encouraged songs and prayers from participants. Drums pounded in support of discontinuing pipeline construction.

Many protesters held up bottled water mixed with oil to represent the contamination they believe the pipeline would cause to their drinking water, reminding everyone present the water had to be safe for future generations.

Shouts of "save our water" could be heard by protesters as they ascended the bridge.

There was little presence of law enforcement for most of the demonstration except for when North Dakota Highway Patrol troopers and local police briefly blocked traffic as marchers crossed to Front Avenue to reach the pedestrian portion of the bridge. The protesters kept to the walkway and held up their signs as motorists honked their horns.

Those gathered Tuesday insisted their message has been a peaceful one.

"I am here because of the water, because of the grandchildren," said Nora Old Man, who held up a water bottle and sang with her grandsons.

Sunny Red Bear, of Eagle Butte, S.D., said she was participating in the march for her 7-year-old son who joined her Tuesday.

"This is about our future. This is about thinking generationally. This is about everyone it affects, community after community. They are choosing oil, wealth and money over our future. I want to protect that the best I can and to show my son to stand up for what's right."

SOUTH DAKOTA

Rapid City may add 15 more firefighters, 9 paid by FEMA grant, six by city (Rapid City Journal)

Mike Anderson Journal staff
Rapid City Journal
Aug. 24, 2016

Rapid City will soon hire 15 new firefighters, thanks in large part to a $1 million federal grant awarded to the city fire department last week.

The new hires will fill a staffing shortage that Fire Chief Mike Maltaverne has urged the city council to address since 2014.

The Staffing for Adequate Fire and Emergency Response Grant, or SAFER, administered through the Department of Homeland Security and the Federal Emergency Management Agency, will pay the salaries and benefits of nine new firefighters for the next two years. The other six out of 15 new positions will be paid for out of the city's budget.

"In 2014, we started to identify that, with the way our demands for service were increasing, our resources were starting to spread thin," Maltaverne said on Tuesday. "Our firefighters were going on more and more calls and the staff increases weren't keeping up with the demand for our services."

In a memo to Mayor Steve Allender earlier this year, Maltaverne said that in 1995, the city's fire department had 81 operational firefighters with an annual call volume of 3,600, or 44 calls per

firefighter. Rapid City has grown significantly in population and geographical area since the 90s, and with that growth has come more fires.

The department's annual call volumes have grown an average of 7.6 percent since then, Maltaverne said, putting last year's total call volume for the department at 17,012 for its 117 firefighters, or about 145 calls per firefighter.

Maltaverne knew it would require some extra funding to get 15 new firefighters on board to fill the service gap and ease the pressure on existing personnel. So he asked the Rapid City Council to pay for six employees if he could find a grant to pay for nine more.

"We thought that would be more realistic, that the city would be able to fund that," Maltaverne said.

The City Council has already agreed to fund three positions, and the mayor has included another three in next year's proposed budget which will be the subject of a public discussion at 6:30 p.m. today in the city council chamber.

"We clearly articulated the need for additional staffing and our elected officials along with FEMA responded, and for that we are grateful," Maltaverne said.

Though the SAFER grant will only pay the other nine new firefighters through two years of service, Maltaverne is confident that will be plenty of time for the council to figure out how to keep funding those positions indefinitely.

"What would be the point of hiring firefighters for two years and then having the city lay them off?" Maltaverne said. "That doesn't solve the long-term problem."

The grant calls for the new hires to be made within 180 days, a deadline Maltaverne has no worries about meeting. This spring, the Rapid City Fire Department went through a hiring process and compiled a selection of suitable candidates.

"We reviewed that and we feel there are a sufficient number of qualified candidates to fill those positions," he said. "We've got a really good deep list of potential employees."

Maltaverne hopes to have all 15 slots filled by Jan. 1, 2017, which is when the SAFER grant funds will be awarded to the city.

Applying for the grant was a comprehensive and competitive process, Maltaverne said, adding that he sees FEMA's decision to award the funds as a form of validation.

"Getting this grant clearly confirms that the need was there," he said.

New fire burning near Angostura Reservoir (KBHB radio)

Gary Matthews

KBHB Radio
August 23, 2016

HOT SPRINGS, S.D. - The Great Plains Fire Dispatch says federal, state and volunteer fire crews are battling a wildfire in the southern black hills.

The Maitland CA fire is located approximately 6.5 miles southwest of Angostura Reservoir.

Dispatch says the fire had reached 34.5 acres as of Tuesday afternoon.

They list the fire as human caused.

There is no word on any structures being threatened.

UTAH

American Fork fish could contain toxic mine waste (Salt Lake Tribune)

By BRIAN MAFFLY | The Salt Lake Tribune
First Published Aug 23 2016 05:30PM • Updated 57 minutes ago

Some of the sediments that have turned American Fork River's normally clear waters into a black soup could be loaded with arsenic, lead and other toxic metals associated with historical mining operations at the scenic canyon's headwaters.

Officials from several local, federal and state agencies gathered at Tibble Fork Dam on Tuesday to figure out what to do about the sediment releases, which commenced sometime after the 10-acre lake began draining Saturday as part of $7.3 million project to upgrade the aging earthen structure.

The incident shocked conservationists who fear an ecological catastrophe is unfolding in one of Utah's most popular natural areas, located in the Wasatch Mountains just outside Provo.

"I think it's a $20 million cleanup and it will take years," said Mark Allen, founder of the group Protect and Preserve American Fork Canyon.

The North Utah County Water Conservancy District sponsored the project with federal matching dollars in an effort to make the dam seismically safe and extend its life for another 50 years. The lake bed is coated with 5 to 10 feet of fine-grained black sediments that have accumulated behind the dam and impaired its ability to store water, though the lake has remained a popular, well-stocked trout fishery.

A sediment release "was not unexpected, given this was a rehabilitation project," said the district's lawyer, John Jacobs. "There may have been a bit more than was anticipated. This is a 60-year-old dam, and it has a lot of sediments behind it."

During the review process, federal officials had considered dredging the lake bed as a way to restore the dam's usefulness, but testing indicated that levels of arsenic and lead exceeded safety

standards and made these sediments too dangerous to move, according to the environmental assessment conducted by the Natural Resources Conservation Service.

The metals contaminating Tibble Fork originated in Live Yankee, Globe and other abandoned gold and silver mines that perforate the head of American Fork Canyon's northern branch, according to Allen. He says the state is doing too little to hold landowners accountable for these environmental "time bombs." Many of these old mines are located on land now owned by Snowbird Ski Resort in and around its Mineral Basin.

The cost of extracting and disposing of the material accumulated in the Tibble Fork lake bed would be $8.4 million, so the option was abandoned in favor of raising the dam by 9 feet. The environmental assessment insisted the contractor use "best management practices" to ensure the toxic sediments were not pushed downstream.

The measures are detailed in a construction permit issued this year by the U.S. Army Corps of Engineers, which would not immediately provide a copy of the permit. It did send personnel to the dam Tuesday to determine whether the project was in compliance with the permit.

The U.S. Environmental Protection Agency also sent emergency-response personnel to the site.

"It was so damning that they didn't want to touch the sediment," Allen said. "Your project is only as good as your most stupid backhoe operator. It said it was too toxic to remove it, but now it's in the river. How are you going to clean up 10 miles of trout streams?"

The water district hired Provo-based RB&G Engineering to design the project and Whitaker Construction, of Brigham City, to build it. RB&G's project leader, Brad Price, did not immediately return a phone message seeking comment.

Allen and members of Trout Unlimited spent Monday in the canyon, photographing the sludge pouring down the river channel, which smelled of gunpowder and rotting fish.

"In the main canyon, the water looks like Mississippi mud," said Grant Bench, an officer with a Utah County Trout Unlimited chapter. "I don't know how a cold-water fish is supposed to survive in that."

But federal and state officials were not ready to declare a disaster Tuesday.

"We are taking samples above [the dam] and below to establish baseline and impact below in the water column," said Walt Baker, director of the Utah Division of Water Quality.

Division of Wildlife Resources aquatics biologist Mike Slater zapped the creek in various places with electroshock equipment Tuesday in search of breathing fish.

WYOMING

Wildfires close Yellowstone's south entrance, burn near west entrance (Billings Gazette)

By JORDON NIEDERMEIER jniedermeier@billingsgazette.com

All roads were open in Yellowstone National Park Tuesday despite several fires growing in the area including a blaze blocking access to the Park’s south entrance.

The West Entrance remained open. But, the Maple fire has burned more than 27,000 acres about five miles northeast of West Yellowstone and reached within a tenth-mile of the roadway to the west entrance. The fire grew more than 4,600 acres on Monday and is mostly growing on the north side of the burn area. It is not expected to cross the road to the west entrance. If fire activity or smoke increases, pilot cars will be used to guide cars through the area, said a National Park Service news release.

The release said fire activity closed a stretch of U.S. Highway 89 in Grand Teton National Park between Leeks Marina and north to Flaggs Ranch. The closure affects travelers planning to use Yellowstone National Park’s south entrance. The road closure is expected to stay in effect until Wednesday. Lizard Creek Campground has also been evacuated.

About 100 people are monitoring the Maple fire. Resources including firefighting aircraft and engines are in the area. However, the fire is not being actively suppressed as it was determined to be caused by a lightning strike and wildfires are an integral part of the Yellowstone ecosystem, said Barbara Dougan, NPS fire information officer.

Dougan said firefighters will work to keep the blaze north of the roadway and east of the Madison River, away from the town of West Yellowstone.

“At this time the fire is doing very well on that side and doing the job of reducing downed debris that’s on the ground,” she said.

Dougan said officials are still working to determine the cause of the nearby 190 acre Boundary fire but it is believed to have been caused by human activity. Firefighters worked to suppress that wildfire and it was about 85 percent contained as of Tuesday morning.

Tropical System Eyes Florida, Southeast US, May Develop Into Hurricane (USA Today)

By Doyle Rice

USA Today, August 23, 2016

What’s now just a disorganized mass of thunderstorms 1,600 miles from Miami could develop into the first hurricane to hit Florida in nearly 11 years late this weekend, forecasters warn.

There's a 60% chance the storm system, known for now only as "99L," could develop into a tropical depression in the Atlantic Ocean later this week. If it swirls into a tropical storm, it will be named Hermine (Her-MEEN).

The system then could rapidly intensify into a large, potentially dangerous major hurricane that would target the Southeast U.S. coast Sunday or Monday, Weather Underground meteorologist Jeff Masters said.

However, as meteorologist John Morales of NBC-6 in Miami notes, "tropical weather forecasting is a very inexact science."

Overall, 6- or 7-day forecasts of tropical cyclone location and intensity are "generally not very good," according to Penn State University meteorologist Jon Nese.

But whether or not the system becomes a tropical storm or hurricane, gusty winds, heavy rains, and possible flash floods and mudslides could occur over the islands of the northeastern Caribbean Sea and the Bahamas, the National Hurricane Center said.

By Sunday, the system could bring deteriorating weather and sea conditions to the east coast of Florida, AccuWeather said.

Most of the computer models meteorologists use to forecast tropical weather show the system hitting the Southeast U.S. between Florida and South Carolina sometime Sunday or later, Masters said.

One computer model, the European, shows the storm crossing Florida and emerging as a major hurricane in the Gulf of Mexico by next week, according to WeatherBell meteorologist Ryan Maue. But the American model, the GFS, does not show that movement.

The most recent hurricane to strike Florida was Wilma in October 2005, AccuWeather said.

A separate system, Tropical Storm Gaston, is projected continue spinning in the central Atlantic. It could become a hurricane later this week, weather officials say. That storm however, is expected to remain over the open Atlantic, though it could stir up strong surf along the eastern shores of Florida, said Scott Spratt, a meteorologist with the National Weather Service in Melbourne, Fla.

Louisiana Flooding Revives FM Chip Argument (Inside Radio)

Inside Radio, August 24, 2016

Each natural disaster presents its own challenges, and the floods that have inundated portions of Southern Louisiana are presenting wireless companies and federal regulators with a now-familiar picture. FM radio stepped in to fill a void left by cellphones rendered useless during an emergency.

"I just cannot thank you guys enough for getting the message out," Denham Springs, LA mayor Gerard Landry said in an appearance on Guaranty Broadcasting's "Talk 107.3" WBRP, Baton Rouge. "I haven't seen a newspaper or watched TV for eight or nine days but everybody has a radio—thank goodness for that," he added.

His comments illustrate the emergency role radio plays during natural disasters, one that broadcasters have repeatedly used as an incentive to wireless companies reluctant to activate FM chips already installed in most cellphones. It's been a tough sell.

"We had stations on the air 24/7 giving out information—this has been horrific and I guess people who are not living here don't understand," Louisiana Association of Broadcasters president Polly Prince Johnson said. "Some of these places didn't have electricity and if the FM chip was on their phones they could have been listening to our local broadcasters who were giving lifesaving information."

Helping to strengthen radio's case was the fact that AT&T suffered a massive outage across the region, leaving a large number of residents and the Louisiana State Police with phones that didn't work. Guaranty Media's Baton Rouge market manager Gordy Rush says when flooding closed a 55-mile stretch of Interstate 12 it left thousands of people stranded on the highway for more than 28 hours with radio as

a lifeline after his stations jerry-rigged a connection to the state police to relay critical information to drivers stuck miles from any exit ramp. “This all played out on the radio,” Rush said.

Johnson says it wasn’t just stuck motorists who were impacted by the cellular outage. It was also families trying to reconnect. “People couldn’t make phone calls for three or four days and then it was sporadic at best—so loved ones were calling the radio stations trying to get the information out,” he explained.

While the wireless industry points out that the new Emergency Alert System sends alerts to cellphones on a localized basis, last week in Louisiana it seems the messages were having the opposite effect as intended. With frequent alerts around the clock, many people whose phones did work became annoyed and switched them off to preserve battery life. “It was a nuisance,” Rush said.

More than a dozen people lost their lives during the Louisiana flooding and while industry lobbyists are likely to tread carefully so as not to appear to be capitalizing on Louisiana’s suffering, those high stakes are what many broadcasters say proves the need for radio on smartphones. “If the FM chip was turned on, people are able to tell them that the water is rising and they should get their stuff and get out,” Johnson said. “It’s in times of disaster when it is so important and it can save lives.”

Added Rush, “This is a matter of life or death.”

After briefly flirting with the idea of lobbying for a federally imposed chip mandate in 2010, the National Association of Broadcasters quickly backed away from the idea. For the past six years, the NAB has instead pushed the telecom industry to activate FM chips on its own. In the ensuing period, Sprint embraced the NextRadio app—which activates the FM chip—three years ago, and by the end of this year, AT&T and T-Mobile will follow Sprint’s lead. The exception is any customer that uses an iPhone since Apple doesn’t include FM radio technology inside its handsets.

“NAB continues to support voluntary activation of FM chips by the carriers,” spokesman Dennis Wharton said. “This is a no-brainer from a public safety perspective, as FEMA’s [administrator] Craig Fugate has noted. We hope all the carriers—along with Apple—will look at the Baton Rouge tragedy as an opportunity to do the right thing and voluntarily light up the chips.”

Back in Louisiana, more than 100,000 households remain without power, but some things are beginning to return to normal. Rush is back at his desk after he jumped from market manager to air personality, spending 32 hours on the air from Friday until Tuesday as some staffers were coping with flooded homes.

Guaranty Media began simulcasting “Talk 107” WBRP on its 100,000-watt classic rock sister “Eagle 98.1” WDGL throughout the storm while country “100.7 The Tiger” WTGE relayed WAFB-TV with station cut-ins. Rush says for a time it looked as though WBRP may have been under threat as its transmitter building was six inches from taking on water after drainage canals backed up and overflowed into its industrial part tower site. Fortunately, the water eventually receded.

Rush, who made it through Hurricane Katrina a decade ago, says the two disasters have left him with an unmistakable conclusion. “Twice now, cellular phones have not been dependable; they’ve failed,” he said, adding, “Radio is a lifeline through this stuff.”

ANALYSIS

- **Colorado:** Construction will begin on a million-dollar bridge over a spillway at Button Rock Preserve. The previous bridge was destroyed in the 2013 floods, and it will be paid for by FEMA, state and local money.
- **Montana:** *The Billings Gazette* carried a summary of the 35 large wildfires burning in the West at present… About 40 people turned out for a protest in solidarity with the Indians protesting an oil pipeline project in North Dakota.
- **North Dakota:** More stories report on the pipeline protest: Standing Rock Sioux Chairman David Archambault II has an opinion piece in the *NY Times* explaining the tribe's stand: BBC News carried a piece on the protest; *The Hill*, the D.C. political paper and web site, carried a piece on the lawsuit seeking to stop the project. ("Dakota Access can't begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn't immediately urgent.") Amnesty International will come to observe the protest, citing concerns about law enforcement withdrawing water supplies for the protestors. *The Bismarck Tribune* also carried a piece on the court action in Washington, where the judge said he would rule by September 9.
- **South Dakota:** No FEMA-related stories.
- **Utah:** Utah gave a $1 million grant to its Department of Environmental Quality to study a pervasive algae bloom that has raised public health concerns in the state… A new state director for the BLM has been appointed. He faces a number of challenges in the state, which are highlighted below. … An AP fire roundup noted a Utah fire near the Beaver Mountain ski resort has crossed into Idaho.
- **Wyoming:** Four wildfires are burning within Yellowstone National Park, and a fire in neighboring Grand Teton National Park has caused a one-hour detour through Idaho to access Yellowstone, though all roads within Yellowstone remain open. Both parks are hosting events this week to celebrate the 100th anniversary of the National Park Service.

Construction to start on spillway bridge at Longmont's Button Rock Preserve

(Longmont Times-Call)

By Karen Antonacci
Staff Writer

Posted: 08/24/2016 06:24:00 PM MDT

Crews with Lawrence Construction will start work on a new bridge spanning the spillway at Button Rock Preserve in September, according to a city news release.

There used to be a way across the spillway, but it was destroyed in the September 2013 flood.

The new bridge will cost $1,081,000 and is being paid for from Federal Emergency Management Agency, city and state money, Longmont Spokeswoman Jennifer Loper said.

FEMA will reimburse the city for 75 percent of the cost, while Longmont and Colorado will each cover 12.5 percent of the $1,081,000, Loper said.

Lawrence Construction, based in Littleton, also built the Martin Street bridge, Loper said.

Water enters the spillway from Ralph Price Reservoir in order to keep water from overflowing Button Rock Dam.

Construction on the spillway bridge is scheduled to start Sept. 7 and last until May.

"An area west of Longmont Dam Road to the top of the spillway will be closed throughout the work period," Longmont engineer Jason Elkins said in the news release.

Hiking trails within the preserve will remain open throughout construction, but hikers will be rerouted to access the popular North Shore Trail that takes people around the reservoir.

"We will lower the water level at the reservoir to create an access point to North Shore Trail at the top of the spillway," Elkins said in the news release.

Button Rock Preserve is a 3,000-acre property that Longmont owns west of Lyons. The preserve is a protected watershed that provides the majority of the drinking water for Longmont and Lyons.

Many hiking trails and infrastructure at the preserve were wiped out in the flood. The preserve reopened to the public in June 2015.

MONTANA

Crews battling 35 large, uncontained wildfires in the West (Bozeman Daily Chronicle)

Updated 4 hrs ago

BOISE, Idaho (AP) — Thirty-five large, uncontained wildfires were burning in the West, and firefighters were making initial attacks on another 112 new blazes to prevent them from spreading.

Firefighters in the region mostly faced windy, dry conditions that have fanned flames that destroyed buildings and forced evacuations in California, Washington, Idaho and elsewhere.

Late last week, the National Interagency Fire Center in Boise, Idaho, upped what it calls the National Preparedness Level to 4, one shy of the highest level, as competition for limited firefighting resources increased.

Here’s a look at the major wildfires in the West:

CALIFORNIA

Authorities say a wildfire that destroyed 45 homes on California’s central coast was not intentionally set but they were still trying to determine the cause.

Cal Fire says arson has been ruled out in the 10-day blaze that has charred 64 square miles of dry brush and timber.

The fire was 39 percent surrounded and at least 2,400 people were under evacuation orders in San Luis Obispo and Monterey counties. Additional warnings for people to be ready to flee were issued Wednesday and one arm of Lake Nacimiento was closed to boaters.

Cal Fire’s Rich Eagan says flames were more than two miles from Hearst Castle, which remains closed but was no longer at immediate risk.

A fire burning for a month north of Big Sur grew again to 135 square miles. Hundreds of homes remain threatened by the fire in rugged wilderness coast along Highway 1. The blaze was sparked by an illegal campfire. It is 60 percent contained.

—–

IDAHO

A fast-moving rangeland wildfire in eastern Idaho expanded to nearly 70 square miles Wednesday, forcing evacuations, threatening a windfarm and burning habitat needed by sage grouse, a federally protected bird.

The Bonneville County Sheriff's Office says evacuations are in place, with up to 70 buildings along U.S. Highway 26 threatened.

Officials say the human-caused fire reported Sunday about 7 miles east of Idaho Falls is making wind-driven runs to the north and east.

Officials say high winds are again predicted Wednesday along with low humidity.

In central Idaho, a 160-square-mile wildfire in a remote, mountainous area continues to defy containment and burn through timbered slopes that are difficult for firefighters to reach.

—–

MONTANA

Cooler weather has slowed Montana's largest wildfire, though 45 homes are still evacuated and 130 more are on alert.

The fire northeast of Thompson Falls had burned 33 square miles as of Wednesday morning.

Fire officials say crews have made progress in securing fire lines and protecting structures. The weather was cooperating again Wednesday with lighter winds and higher relative humidity forecast.

Minimal fire activity is also being reported from a fire burning west of Lakeside.

About 75 homes and other structures are within a half-mile of the fire's perimeter. No evacuations have been ordered.

—–

UTAH

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

Connect with the Chronicle on Facebook for the latest news, links and more.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WASHINGTON

Favorable weather conditions helped crews make progress Wednesday against a series of wildfires in Eastern Washington that have burned at least 18 homes this week.

A fire burning on the Spokane Indian Reservation was 30 percent contained. That fire covered more than 27 square miles and had destroyed at least 13 homes on the reservation, said Jamie Sijohn, a spokeswoman for the tribe.

"The devastating fire jumped the Spokane River from Lincoln County onto the Spokane reservation in three separate locations," Sijohn said.

It roared toward the town of Wellpinit, forcing the evacuation of the entire town on Sunday. But that order has since been lifted, Sijohn said.

Meanwhile, a fire near the town of Davenport in Lincoln County covered 6.5 square miles, and was 20 percent contained.

Another fire south of Spokane, in the Valleyford area, was 50 percent contained. It had burned more than 10 square miles and destroyed at least five homes, officials said. Mandatory evacuations ended on that fire on Tuesday night.

___

WYOMING

Some tourists heading to Yellowstone National Park during the busy summer season were facing an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hope cooler weather slows the flames over the next couple of days.

Crowd turns out in Billings for North Dakota pipeline protest (Billings Gazette)

By MIKE KORDENBROCK mkordenbrock@billingsgazette.com

Dozens of people in Billings turned out Wednesday to protest the construction of a $3.8 billion pipeline beginning in North Dakota, standing in solidarity with the hundreds who have been protesting the pipeline with the Standing Rock Sioux tribe.

At its height, around 40 people stood on the sidewalk near the Yellowstone County Courthouse lawn holding signs encouraging supporters to honk and chanting, "Water is sacred, water is life." That was double the people event organizer Bailey Brown had expected.

The Dakota Access Pipeline is proposed to transport Bakken crude to Illinois, passing under the Missouri River.

The importance of clean water and clean air were on the mind of Tajin Perez, a Billings resident who helped Brown with the event.

"Clean air and clean water should be a right to everybody, not just those who can afford it," Perez said. "That's why people are here. They've been drawn out to the same call to stand up for what's right, for what's fair for everyone, especially those who have been disadvantaged for so long in regards to contemporary issues between the U.S. government and the Native peoples of this country."

Gerald Sherman and his wife, Jael Kampfe, made the drive from Bearcreek with four coolers of meat for Brown to deliver along with other supplies to protesters when she heads to North Dakota on Friday in a rented van.

“I’m not against oil, but I’m against a pipeline crossing the river,” said Sherman, a banking industry retiree and Oglala Sioux tribal member. “These pipelines have a history of breaking. It happened in the Yellowstone.”

When he and his wife heard about the protest in Billings, they posted their plans to attend on Facebook, and three families from Red Lodge responded by donating meat for them to take.

Sherman and Kampfe joined Lucky’s Market, Natural Grocers and others who have provided camping supplies and food for Brown to transport.

“I’m really impressed,” Brown said of the turnout. “Especially the people honking.”

Collette Montclair, a member of the Standing Rock Sioux Tribe who has lived in Billings for two years, said she’s proud of the efforts of her family and friends who have been protesting in North Dakota and that she is sad that she can’t join them. Work has interfered with her plans to return home, Montclair said, and she expected she wouldn't make the journey until October.

Like Brown, she also noted how honking car horns raised her spirit.

“I love all the support, everybody going by honking their horns,” she said.

Joining Monclair was her 4-year-old daughter, Ayasha.

“We want her to be a part of everything,” Montclair said of her daughter, who was seated on the sidewalk with a sign.

As challenges to the pipeline and its protesters continue to play out, it’s unclear what Montclair will tell her daughter when she grows older, but she offered some thoughts about what she hopes she can say.

“That everybody stood up for what’s right, stood up for what’s ours, and that we were all a part of it.”

NORTH DAKOTA

Taking a Stand at Standing Rock (New York Times)

By DAVID ARCHAMBAULT II
AUG. 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe’s cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company’s assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small

construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline's economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government's environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest "unlawful," and Gov. Dalrymple has declared a state of emergency.

It's a familiar story in Indian Country. This is the third time that the Sioux Nation's lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it's gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America's prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see

that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: “Let us put our minds together and see what life we can make for our children.” That appeal is as relevant today as it was more than a century ago.

David Archambault II is the chairman of the Standing Rock Sioux tribe.

Protests over huge N Dakota oil pipeline (BBC)

24 August 2016

More than 100 protesters have gathered in Washington DC to express their fears about a huge oil pipeline which will cross four states in the western US.

The $3.7bn (£2.8bn) Dakota Access pipeline has prompted huge protests, notably in North Dakota where Native Americans have halted its construction.

It will run 1,168 miles through Iowa, Illinois, and North and South Dakotas.

US District Judge James Boasberg said on Wednesday he will make a decision on the issue by 9 September.

Outside the court in the US capital, environmental activists made their feelings clear.

They believe the transporting of up to 570,000 barrels of crude oil a day will imperil local waterways.

The company behind the pipeline, Energy Transport Partners, has said the project will boost local economies and is much safer than transporting oil by rail or road. But protesters disagree.

Activists Desiree Fairooz and Lenny Bianchi were among the demonstrators outside the court, where a federal judge was set to consider the Standing Rock Sioux tribe's request for an injunction that would effectively block the pipeline's construction.

"We're concerned about the Native Americans and the threat to their water supply but we're also concerned about the fossil fuel issue," said Mr Bianchi, a Blue Mountain, Virginia native.

"We don't feel that we should be building pipelines, we feel that the money should instead be spent on alternative sources of energy."

Protesters gather outside the US District Court while awaiting a judge's decision on whether to issue an injunction against the construction of the Dakota Access pipeline.

Dozens of protesters convened outside the US District Court, with environmental activists and members of the Standing Rock Sioux tribe uniting behind one message - water is life.

The crowd was studded with signs bearing the words "native lives matter", "water is life" and "be on the right side of history, no DAPL [Dakota Access pipeline]."

Valentine Little Shield, a member of the Cheyenne River Sioux tribe in South Dakota, took a bus to Washington to show her support for the Standing Rock Nation Tribe.

Ms Little Shield describes the contested pipeline as personal. Her grandchildren use the waters where the pipeline poses a threat to swim, fish and bathe their horses.

"I'm here because of my grandkids and what they're going to go through," she said. "They can't drink the oil, they can't take a bath in the oil."

Generations of native Americans, both young and old, took turns sharing personal accounts of why halting the pipeline was important to them as crowd broke into battle cries and pounded tribal drums.

"We're not here to protest, we're here to protect," said Lance Frazier, a member of the Cheyenne River Sioux Tribe in Eagle Butte, South Dakota.

But for many, the pipeline symbolises a deeper issue among Native Americans.

Denise Desiderio, the policy director for the National Congress of American Indians, called the unilateral support of tribes across the country a "historic" moment.

"We need to make sure our tribal voice is heard and when we raise our voice, we need to make sure it transcends this issue," she said, noting the important symbolism of land to the Native American community.

"We have had enough lands taken away, we can't let what we have left be destroyed."

Hundreds of people have been occupying one of the construction sites in North Dakota, where tensions have been running high between demonstrators, police and builders.

Judge hears tribe's argument against ND pipeline (The Hill)

By Devin Henry - 08/24/16 04:13 PM EDT

Opponents of a major North Dakota pipeline project brought their case to federal court Wednesday.

The Standing Rock Sioux tribe told a federal district judge that the government didn’t consult the tribe before approving a route for the pipeline of energy company Dakota Access, which is to run close to sacred and environmental sites in North Dakota.

They worry a breach in the pipeline will imperil the Missouri River, which runs near the project.

The tribe last month sued the Army Corps of Engineers, which approved the pipeline route. On Wednesday, lawyers for the tribe asked District Judge James Boasberg to block construction on the project until the tribe can conduct more assessments of its route.

“The law gives the tribes the opportunity to go out and evaluate the impact on important sites,” Jan Hasselmen, the Earthjustice lawyer representing the tribes, said. “The tribe and other tribes are concerned about impacts all along the length of the pipeline.”

Federal attorneys dismissed the complaint, saying they offered the Standing Rock Sioux the chance to assess the pipeline with them and that the tribe declined, while other tribes in the region took them up on the offer.

“The Corps followed procedure in this case when it actively worked to engage with the plaintiffs, the Standing Rock Sioux,” said federal lawyer Matthew Marinelli.

Dakota Access said it has taken steps to avoid damaging culturally important areas in the region. The company’s attorney, William Leone, told the court, “This is not a cowboy process.”

Early construction on the pipeline route is mostly complete in North Dakota, and the focal point of Wednesday’s hearing was on its route under the Lake Oahe segment of the Missouri River.

Dakota Access can’t begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn’t immediately urgent. Boasberg said he will try to decide the case within two weeks.

The 1,170-mile, $3.7 billion Dakota Access project would carry 570,000 barrels of Bakken crude oil from North Dakota to Illinois. Tribal groups have waged legal battles against the pipeline for months, and the project has drawn protests from tribes in North Dakota and anti-pipeline activists around the country.

Wednesday’s hearing was preceded by a rally outside the federal district court building in Washington, D.C., with tribal representatives and allies slamming federal energy policies that they say minimize tribal input. The protest drew celebrity activists like actresses Susan Sarandon and Shailene Woodley.

In North Dakota, protests against Dakota Access have landed up to 20 people in jail. Construction on the pipeline has stopped, and a federal judge in North Dakota has issued a restraining order against protesters at the site.

He will hear arguments on issuing an injunction against the protests in early September.

Amnesty International to observe pipeline protest (Bismarck Tribune)

JENNY SCHLECHT Bismarck Tribune

Amnesty International has sent a delegation of human rights observers to monitor the law enforcement response to the camp protesting the construction of the Dakota Access Pipeline under the Missouri River.

Thousands of people, including members of at least 60 Native American tribes, have camped out south of Mandan near the construction site of the pipeline -- which, if completed, will take Bakken oil to Illinois.

Tarah Demant, a spokeswoman for the delegation, said the international human rights organization has been concerned about reports that the state of North Dakota took away water resources that had been provided to protesters.

“We are concerned about the health and safety of protesters,” she said.

State-owned trailers and water tanks were removed earlier this week from the protest camp after reports of unlawful activity stoked fears among state officials that equipment would not be secure.

Amnesty International sent identical letters to North Dakota Highway Patrol Col. Michael Gerhart and Morton County Sheriff Kyle Kirchmeier to remind them of how officials are called upon to act during protests according to international human rights standards and the U.S. Constitution.

The letters discuss use of force, decisions to break up protests and how those decisions should be communicated, the use of detention and other issues.

Demant said Amnesty International only recently began sending observers to protests within the United States to ensure that law enforcement officials were protecting the right to peaceful protest, though the organization has a long history of such observations internationally. It has not previously visited North Dakota for that purpose.

The delegation arrived in Bismarck midafternoon Wednesday and had not yet traveled to the protest camp.

“Our hope is that we won’t have anything to report,” Demant said.

North Dakota Highway Patrol Lt. Tom Iverson and Donnell Preskey, a spokeswoman for the Morton County Sheriff’s Department, said they were not aware of any communications between local enforcement and Amnesty International. The group’s arrival will not change anything about how the patrol approaches the protest, Iverson said.

“Our message remains the same,” he said. “We need to keep everybody safe and promote safety for everybody involved — protesters, workers, law enforcement and the motoring public.”

Federal judge to rule Sept. 9 on Dakota Access injunction (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

“A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million,” the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.

Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

“Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court,” Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe’s historic preservation officer and many general tribal members.

“It highlighted how important this is to the tribe; this is not a small issue to them,” Tsosie said.

$1 million hardship grant awarded for Utah Lake study (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 3:50 p.m. MDT

Algae is seen floating near the shoreline at Utah Lake State Park in Provo on Friday, July 15, 2016. Public health officials decided to close the lake due to the large bloom. It was reopened on July 28, 2016. *Spenser Heaps, Deseret News*

Summary
The Water Quality Board awarded $1 million in a hardship grant to the Utah Department of Environmental Quality to continue its nutrient pollution probe of Utah Lake. This summer's pervasive algal bloom has created widespread public health worries.

SALT LAKE CITY —The second phase of a Utah Lake nutrient study to probe the algal bloom problem will begin thanks to a $1 million hardship grant awarded Wednesday to the Utah Department of Environmental Quality.

Members of the Utah Water Quality Board voted to approve the emergency grant in light of the extensive and pervasive spread of cyanobacteria at Utah's third largest lake — a problem that began early in the season and has been unprecedented in its scope.

“It’s time for us to take a hard look at the impacts of nutrients on Utah Lake,” said Walt Baker, director of the Division of Water Quality. “This study will provide us with the data and tools we need to evaluate the complex chemical and biological factors at play in the lake and make decisions that improve and protect this valuable resource.”

The funding continues a two-phase, four-year water quality study that will evaluate water quality data and look at the nutrient loads — or the amount of phosphorus and nitrogen in the lake — that is the cause of the harmful algal bloom.

Additional goals include developing tools for effective decision-making and involving partners and interested groups in stewardship of the lake's health.

Utah Lake was closed to public access for two weeks in mid-July because of an algal bloom that covered most of its surface. Lincoln Beach has been posted off-limits since the outbreak. The cyanobacteria can produce toxins that can be deadly to domestic animals and cause severe symptoms in people.

The bloom eventually spread to the Jordan River, and subsequent blooms have been reported at Payson Lake and Scofield Reservoir.

Multiple southern Salt Lake County communities suspended delivery of secondary water over fear the contamination would pose a health risk to people or make irrigated crops and gardens unsafe for consumption. The Utah Department of Agriculture and Food has since received lab results that showed no toxins in the produce that may have come in contact with the water.

This week, the Utah County Health Department upgraded two of its advisories based on new test results, elevating the public health warnings at the Saratoga Springs Marina and at Sandy Beach.

Conditions this summer have been ideal for the formation of the blooms. Utah Lake is 4 feet lower than what is typical, and the combination of heat and sunlight helps to foster the growth of algae.

In 2014, the Utah Water Quality Board approved a rule regulating the amount of phosphorus that wastewater treatment plants can discharge into water, including at Utah Lake. The rule, which does not take effect until 2020, requires technology upgrades at the plants to reduce the nutrient's presence in treated effluent.

“The challenges facing Utah Lake affect all of us,” Baker said. "We believe a collaborative, informed and science-based approach is our best hope for finding solutions that meet the needs of the lake, its users and the aquatic life that depend on a healthy lake for their survival.”

BLM gets new Utah director, and land challenges await (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 4:00 p.m. MDT

Summary

A 37-year veteran of the Bureau of Land Management has been selected to lead state operations in Utah, a position that has been without a permanent head for a year. Edwin Roberson was director of the BLM's National Operations Center.

SALT LAKE CITY — The Bureau of Land Management announced Wednesday that an agency veteran will lead Utah operations, filling the shoes of Juan Palma, who left more than a year ago.

Edwin L. Roberson, a 37-year career leader with the BLM, comes to the Utah post after serving as director of the BLM National Operations Center in Denver, where he oversaw the agency's operational and technical support for information technology, finance and human resources.

Roberson also served in top leadership roles in New Mexico and held senior level positions in Washington, D.C., including a seven-year tenure as the BLM's assistant director for renewable resources and planning, a position that oversees a number of BLM resource programs.

"Ed is a good listener, a proven coalition-builder and a natural leader. We are fortunate to have his experience and expertise in Utah," said BLM Director Neil Kornze. "Ed has guided some of the agency's most important work during his career, and his experience working with local communities makes him the perfect fit for this job."

Roberson will lead an agency at the forefront of the public lands controversy in Utah, where frustrated rural leaders have challenged BLM road closures by participating in ATV rides that left them with federal criminal convictions.

In Salt Lake City, the Utah BLM offices became the first in the country to postpone an oil and gas lease sale because of a protest planned by the Keep It in the Ground Movement.

Law enforcement contracts between the BLM and local sheriff offices have also been a source of rural strife, with multiple county commissioners traveling to Washington, D.C., to demand personnel changes due to accusations of a "rogue" agent who has soured relations.

Ranchers have also sued the U.S. Department of Interior over what they say is mismanagement of the wild horse and burro populations that have degraded rangeland conditions and threatened their livelihood.

On the flip side, the BLM has been a tempest for wild horse enthusiasts who say the agency favors grazers over native horse populations and institutes "cruel" roundups that injure or kill the horses.

Utah, too, is among several states in the West that are suing over BLM management plans on the imperiled sage grouse. States say cornerstones of their own sage grouse conservation plans were ignored in federal plans they assert are too restrictive and not based on science.

As head of the often embattled agency, Roberson will lead a team that administers 23 million acres of public lands and 32 million acres of minerals and energy resources in Utah.

Roberson, who begins his new job Oct. 3, has bachelor's and master's degrees in urban planning from Auburn University in Alabama.

The Latest: Fire Near Utah Ski Resort Crosses Idaho Border (AP)

Associated Press, August 24, 2016
SAN SIMEON, Calif. — The Latest on wildfires burning in the West (all times local):
11:50 a.m.

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WYOMING

Yellowstone tourists face detour for fire but landmarks open (Associated Press)

YELLOWSTONE NATIONAL PARK — Some tourists heading to Yellowstone National Park during the busy summer season faced an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hoped cooler weather would help slow the flames over the next couple of days.

"Yellowstone National Park is open for business," fire spokesman Bill Swartley said.

U.S. Interior Secretary Sally Jewell is set to visit Yellowstone on Thursday, and no changes have been made to her plans because of the fire, Swartley said.

The fire in Grand Teton has burned about 11 square miles since lightning sparked it last month, forcing the evacuation of about 50 people from a lodge and cabin operation and several campgrounds. Thirty horses also have been evacuated.

Meanwhile, four fires were burning inside Yellowstone, but all major visitor areas and roads were open.

The largest blaze spans about 42 square miles between the community of West Yellowstone, Montana, and Madison Junction, an area in the park with a campground, visitor facilities and staff housing. Lightning ignited it Aug. 8.

Swartley said the fires were mostly being allowed to burn because they were not threatening major tourist areas.

"These fires are being managed as basically a good fire for the ecology and then, of course, if there's anything getting close to cultural resources or public resources, structures, the fire is being engaged," he said.

A 10-mile stretch of U.S. 89/191/287 has been closed since Monday after flames leaped across it and were burning near the highway. The prospects for reopening the route are “not good in the near future” because the fire was close to the highway, fire spokeswoman Karen Miranda said.

Travelers coming from the south via the Jackson Hole area can still access Yellowstone through Idaho and the West Entrance. The detour adds a little over an hour to the drive to Old Faithful.

The fire is burning on both sides of the northern portion of Jackson Lake, but no buildings have been lost. More than 100 firefighters, supported by helicopters, are battling the flames.

Cooler temperatures and higher humidity were expected over the next couple of days and should help firefighters, Miranda said.

COLORADO

Cybersecurity Center in Colorado Springs to hire CEO and host national conference (Colorado Springs Gazette)

By: Wayne Heilman

The National Cybersecurity Center in Colorado Springs plans to hire a CEO next month and will host officials from across the country at a three-day conference in November at The Broadmoor.

A four-person search committee from among the center's 12 directors will conduct interviews and make a recommendation to the board, which plans to select the CEO by mid- to late September, said Eric Hopfenbeck, the center's deputy executive director. Hopfenbeck was speaking at a panel discussion Wednesday about the facility held at the DoubleTree by Hilton Hotel. The board began the nationwide search process in early July with help from Heidrick & Struggles International Inc., a Chicago-based executive search firm. The company helped create a job description and determine pay and other details about the position.

"The budget, staff and management structure (of the center) will be determined after the CEO is hired," Hopfenbeck said. "We are still in the development stage, so we are collecting contact information from consultants, partners and subject-matter experts who want to support the NCC."

The center's three-person staff is headed by retired Army Lt. Gen. Ed Anderson, who serves as interim executive director and also is executive director of strategic, military, science, space and security initiatives for University of Colorado at Colorado Springs Chancellor Pam Shockley-Zalabak.

The panel discussion was part of a two-day cybersecurity training and technology forum hosted by the Colorado Springs chapter of the Information Systems Security Association that also included a keynote address by Mark Weatherford, a NCC board member who also is a former deputy undersecretary for cybersecurity of the U.S. Department of Homeland Security.

The newly hired CEO will have a major role in organizing a three-day National Cybersecurity Institute the center will host Nov. 13-15 at The Broadmoor for invited guests that include governors and attorneys general of all 50 states plus an undisclosed number of mayors and county commissioners, Hopfenbeck said. The event will bring real-time information on the latest cyber trends, security, best practices and education resources to the elected officials to help them better protect government computer systems, networks and critical public assets.

The conference will be the center's public launch. A Rapid Response Center to help small- to mid-sized businesses, nonprofits and government agencies combat and recover from cyber attacks, and a Cyber Research, Education and Training Center that will conduct research on cybersecurity threats and develop a cybersecurity workforce through education programs at UCCS and other schools around the state and nation, are expected to begin operations by next summer. UCCS is meeting with other colleges and universities to develop a cybersecurity curriculum, Hopfenbeck said.

The center also will work with the Western Cyber Exchange and Air Force CyberWorx. The exchange is a 5-year-old group started to strengthen local cybersecurity measures, attract more workers to the industry and share information about cyber attacks and how to prevent and defend against them. The exchange also operates the nation's only Information Sharing and Analysis Organization focused on the private sector. CyberWorx, formerly the Air Force Cyber Innovation Center, does research and testing of cyber security issues and technology at the Air Force Academy.

The center has received three proposals from contractors for renovations to a former TRW manufacturing plant at 3650 N. Nevada Ave. Renovations will be funded by nearly $8 million included in legislation signed into law by Gov. John Hickenlooper in May. A contractor is expected to be selected by mid-September. The building is owned by UCCS and will become the center's permanent home when renovations are complete. The center is operating from temporary offices at 1867 Austin Bluffs Parkway, Suite 200, across from the east end of the UCCS campus.

MONTANA

Lewis and Clark among 9 Montana counties in severe drought, 11 more under alert (Helena Independent Record)

TOM KUGLIN Independent Record

State officials say Lewis and Clark County is among nine in Montana that reached “severe drought” status Thursday, while another 11 counties have hit “drought alert.”

Lt. Gov. Mike Cooney is chairman of the Governor's Drought and Water Supply Advisory Committee. He says the region has had two years of low snowpack, early runoff and little moisture under the soil.

The alert and severe designation are intended “to give high visibility to the continuing impacts of drought in affected areas, to prompt communication among stakeholders, and to direct state agencies to take the steps identified in the Montana Drought Response Plan to mitigate the impacts of drought,” Cooney wrote in a letter to county commissioners.

The counties in severe drought are Lewis and Clark, Powell, Teton, Missoula, Sweet Grass, Stillwater, Carbon and Yellowstone.

The seven counties put on alert status Thursday are Broadwater, Jefferson, Silver Bow, Granite, Mineral, Park and Big Horn. Glacier, Pondera, Carter and Sanders counties were previously on drought alert.

Drought Alert - Governor's Drought Advisory Committee strongly encourages local officials to convene local drought committees.

Severe Drought - Local officials should have local drought planning efforts underway or should reconvene the local drought committee at the earliest opportunity.
For recommended responses, see the Montana Drought Plan

Map created August 4, 2016 based on data for the month of July

This map was created using the US Drought Monitor and the monthly NRCS Surface Water Supply Index (SWSI) as a guide. In general, a county was assigned a Moisture Status based on the highest drought category intersecting any part of the county. The map was then compared to the monthly SWSI, PRISM, and other precipitation products. The Montana Governor's Drought and Water Supply Advisory Committee, made up of experts from the National Weather Service, the Natural Resource Conservation Service, the Farm Service Agency, United States Department of Agriculture, the Montana Department of Natural Resources and Conservation, the Montana State Library, and the Montana Bureau of Mines and Geology, reviewed the map.

DNRC

Neither the alert nor the severe designations carry any official status with respect to state or federal disaster assistance programs.

The severe designation prompts county commissioners and disaster and emergency services coordinators to document any economic, health and safety emergencies that warrant either state or federal dollars, according to DNRC drought coordinator Ada Montague.

The alert status prompts local officials to document crop or livestock loss or impacts that could then trigger federal disaster assistance, she added.

“At the local level, certain watersheds have voluntarily developed local drought response plans, namely the Blackfoot, the Big Hole and the Jefferson,” Montague wrote in an email. “This is where water right holders have worked together to determine proper triggers and response mechanisms for individual water bodies.”

Montana’s drought plan was written in 1995 and the state is currently in the process of updating it, she said.

Lewis and Clark County Disaster and Emergency Services Coordinator Paul Spengler says the driest portions of the county are in the north and along the Rocky Mountain Front. The Helena Valley is also seeing about a 2-inch shortfall on precipitation this year, he said.

The drought does affect irrigators that tap creeks or streams and dry-land farmers, but those on the Helena Valley Irrigation District drawing from the Missouri River are not limited, said Jim Foster with the district.

Irrigators depending on the Sun River, suffering from particularly low snow pack, have seen their water usage cut early this year.

NORTH DAKOTA

North Dakota Oil Pipeline Battle: Who’s Fighting and Why (NY Times)

By JACK HEALYAUG. 26, 2016

A protester rode a horse through the construction site for the Dakota Access oil pipeline in south central North Dakota. Credit Daniella Zalcman for The New York Times

This week, an impassioned fight over a 1,170-mile oil pipeline moved from the prairies of North Dakota to a federal courtroom in Washington. The Standing Rock Sioux tribe, whose reservation lies just south of the pipeline’s charted path across ranches and under the Missouri River, has asked a judge to halt construction. The American Indian tribe argues that a leak or spill could be ruinous.

It may take until Sept. 9 for a federal judge to decide whether to allow the Dakota Access pipeline to move ahead, or grant an injunction that would press the pause button on construction.

Here is a look at how the battle over the pipeline has become an environmental and cultural flash point, stirring passion across the Plains and drawing hundreds of protesters to camp out in rural North Dakota.

What Is Happening in North Dakota?

American Indians have been gathering since April outside Cannon Ball, a town in south central North Dakota near the South Dakota border, to protest the Dakota Access pipeline as construction commences. Starting with members of the Standing Rock Sioux tribe, the protest has since grown to several hundred people — estimates vary — most of them from tribes across the country.

The protesters have encamped in a field belonging to the United States Army Corps of Engineers. Each day, they march a mile up a highway to a construction site where preparatory work is being done for the pipeline. While the protesters say they are peaceful, there have been reports of heated confrontations with law enforcement officers and construction workers, and 20 people have been arrested. Construction on a road to the pipeline has stopped for the moment. The pipeline company, Energy Transfer Partners, has sued several protesters, claiming they have threatened and intimidated contractors and were blocking work at the site.

What Does Each Side Want?

The Dakota Access pipeline is a $3.7 billion project that would carry 470,000 barrels of oil a day from the oil fields of western North Dakota to Illinois, where it would be linked with other pipelines. Energy Transfer says the pipeline will pump millions of dollars into local economies and create 8,000 to 12,000 construction jobs — though far fewer permanent jobs to maintain and monitor the pipeline.

Members of the Standing Rock Sioux tribe see the pipeline as a major environmental and cultural threat. They say its route traverses ancestral lands — which are not part of the reservation — where their forebears hunted, fished and were buried. They say historical and cultural reviews of the land where the pipeline will be buried were inadequate. They also worry about catastrophic environmental damage if the pipeline were to break near where it crosses under the Missouri River.

What About Protests in North Dakota?

For the moment, the mood there is calm, but anxious. North Dakota’s governor has declared a state of emergency there, and law enforcement has barricaded the main highway leading to the protest site and the campers.

Hundreds of people are camped out about a mile down the road from the construction site. They say they are there to pray and protest peacefully, but some people are worried that the situation could turn volatile if work resumes at the site or the government tries to disband the camp.

Are Others Fighting the Pipeline?

Yes. State and federal agencies have approved the pipeline, and some farmers and ranchers have welcomed the thousands of dollars in payments that came with signing agreements to allow it to across their land. But others oppose the pipeline.

In Iowa, one of the four states that the pipeline would traverse, some farmers have gone to court to keep it off their land. They say that Iowa regulators were wrong to grant the pipeline company the power of eminent domain to force its way through their farms. Most landowners in the 346-mile path of the pipeline through Iowa, however, have signed easements allowing it to be built across their land.

American Indians vs. Dakota Pipeline

The Standing Rock Sioux tribe and others are protesting the Dakota Access pipeline, which they say threatens water supplies and sacred lands.

How Many Pipelines Cross the United States?

The United States has a web of 2.5 million miles of pipelines that carry products like oil and natural gas, pumping them to processing and treatment plants, power plants, homes and businesses. Most of the lines are buried, but some run above ground.

While a natural gas line to a newly built subdivision is not likely to generate national controversy, proposed major pipelines like the Keystone XL, the Dakota Access or the Sandpiper in northern Minnesota have generated huge opposition from environmental groups and people living in their paths.

How Safe Are Pipelines?

Energy companies and their federal overseer, the Pipeline and Hazardous Materials Safety Administration, promote the safety record of pipelines. Pipeline companies say it is far safer to move oil and natural gas in an underground pipe than in rail cars or trucks, which can crash and create huge fires.

But pipeline spills and ruptures occur regularly, sometimes in small leaks and sometimes in catastrophic gushers. In 2013, a Tesoro Logistics pipeline in North Dakota broke open and spilled 865,000 gallons of oil onto a farm. In 2010, an Enbridge Energy pipeline dumped more than 843,000 gallons of oil into the Kalamazoo River in Michigan, resulting in a cleanup that lasted years and cost more than a billion dollars, according to Inside Climate News.

In a 2012 examination of pipeline safety, ProPublica reported that more than half of the country's pipelines were at least 50 years old. Critics cited aging pipelines and scant federal oversight as factors that put public health and the environment at risk.

Corps says pipeline still needs water-crossing easement (Bismarck Tribune)

- LAUREN DONOVAN Bismarck Tribune
-

Standing Rock Sioux Chairman David Archambault II, center, is surrounded by family and friends following his address to the council fire gathering at the Dakota Access Pipeline protest encampment Thursday after returning from a federal court room in Washington, D.C.

MORTON COUNTY — While hundreds are settling in for the long haul at an encampment to protest the Dakota Access Pipeline, the U.S. Army Corps of Engineers confirmed Thursday that the pipeline developer, Energy Transfer Partners, does not yet have a written easement to build the pipeline on corps property.

Corps spokesman Larry Janis said the easement is still under review, though the agency did issue Section 408 permission in late July that allows the easement to be written.

"They can't build the project by accessing corps property from west to east across Lake Oahe," Janis said of any current construction.

That could partly explain the company's decision Aug. 18 to voluntarily stop construction at its work site just north of the Standing Rock Sioux Reservation near the Missouri River-Lake Oahe, where an active protest led to 28 arrests. The company has since received a federal court restraining order to prevent all arrestees — including tribal chairman Dave Archambault — and any "Jane and John Doe" from being at the work site and places such violations in federal, not district court.

The stopped work also stopped active protest, and protesters have since held prayer circles and other gatherings in the camp area about 1 mile south.

The realization that the company still does not have an actual easement surfaced Wednesday in a federal district court in Washington, D.C., where the Sioux tribe's request for an injunction to stop the pipeline pending its suit against the corps was heard. The court judge said he wants more time to study whether the corps failed to follow the National Historic Preservation Act and other federal laws in its environmental review of the project. The judge said he will rule on the injunction Sept. 9.

"Everybody thought they had it (easement)," said attorney Carolyn Raffensperger, executive director of the Science and Environmental Health Network. "This is really important information."

Raffensperger is among four attorneys volunteering legal services to the tribe and the individuals who were or may be arrested.

They addressed several hundred circled around the council fire mid-day Thursday; a cool, breezy day that called for blankets and jackets. They said legal issues may get worse for the state of North Dakota and other agencies.

Amnesty International observers were in the camp Thursday and an observer from the United Nations is scheduled to be in camp Tuesday, said Phyllis Young, the Standing Rock camp coordinator.

Young said the tribe is alleging racial discrimination for acts including a police barricade on Highway 1806 near Mandan that detours anyone going home to the reservation, but gives access to everyone else north of the reservation, and airplane surveillance.

"We are exploring the defense of that roadblock. There's nothing to warrant that kind of lockdown," said Angela Bibens, an attorney.

The roadblock is manned 24 hours a day by North Dakota Highway Patrol troopers and other cooperating agencies. Bibens urged anyone with an outstanding warrant or unpaid child support to refrain from getting arrested to prevent their personal problems from getting worse. She said only people with a clean record should consider themselves arrest-able.

Meanwhile, camp managers met Thursday to discuss logistics now that it appears the camp, with anywhere from 500 to 2,000 people in tents and tepees, will stay active until the court's injunction decision Sept. 9.

Johnelle Leingang, an emergency manager, said a noticeable number of people left the camp after Wednesday's news that the injunction decision would be delayed.

"The majority are coming back, and the head cook said she'll provide the same amount of food for 2,500 people," Leingang said.

The camp is actually three camps: the main Seven Council camp on the north side of the Cannonball River, the Rosebud camp across the river and the original Sacred Stone Spirit camp further southeast.

Even as a small group from the Arizona Navajo Nation that brought meat and produce to the campers earlier this week packed up to go home Thursday, a group of eight Native Descendants from California rode in on motorcycles to stay through the weekend.

"It was a beautiful drive. We had the heart and the spirit to get here and, if we could stay longer, we would. This is history in the making," Anthony Cuevas, said.

Chairman Archambault, who this week had an opinion piece on the protest published in the New York Times, spoke at the council fire after returning from the D.C. court hearing.

He expressed gratitude for the support from tribal nations around the country and for the peaceful prayerful nature of the camp.

“When this is done, if it’s ever done, they will remember the people who live on reservations. What I see today is unbelievable. The prayers are never-ending," said Archambault, adding that the protest has caught the attention of the nation.

Reach Lauren Donovan at 701-220-5511 or lauren@westriv.com.

Protesters adjust to camp life (Bismarck Tribune)

- CAROLINE GRUESKIN Bismarck Tribune

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere on the afternoon of Aug. 18 at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Aug. 17, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Wednesday, when a hearing was held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement on Aug. 19 no weapons were seen.

Many at the camp saw the previous days’ efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It’s been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Aug. 18, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Native Americans Protest New Oil Pipeline In North Dakota (NPR)

August 25, 20164:26 PM ET
Heard on All Things Considered

Amy Sisk

Native Americans and environmentalists are protesting a pipeline slated to carry a half a million barrels of crude daily from North Dakota to Illinois. But the oil industry says the pipeline is safe.

KELLY MCEVERS, HOST:

A fight over the route of a new pipeline is gaining momentum while it plays out in court. Hundreds of Native Americans from tribes across the United States are protesting in North Dakota. They're setting up camp at the site where the pipeline is slated to cross under the Missouri River. Reporter Amy Sisk of the public radio collaboration Inside Energy says the group is finding an eager ally in environmental groups.

AMY SISK, BYLINE: In what's usually an empty field, there are cars, trucks, teepees and tents surrounding me in a site near the Standing Rock Sioux Reservation in south central North Dakota. Those protesting here don't want the Dakota Access pipeline built. That pipeline is permitted to cross federal land under the Missouri river a mile north of the reservation border.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: But the tribe is essentially saying not in our backyard.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: Alice Brownotter is just 12 years old. Today she's leading a crowd of hundreds of protesters.

ALICE BROWNOTTER: When it goes through - or if - and when it breaks, it will affect everyone.

SISK: Like others here, Brownotter worries that if the pipeline leaks, it will affect the drinking water on her reservation. The pipeline is approved to stretch from the Bakken oil fields of western North Dakota to Illinois. Dallas-based Energy Transfer Partners is building it and says it could carry more than half of North Dakota's daily crude production.

Kari Cutting is with the North Dakota Petroleum Council. She says state-of-the-art equipment will monitor this pipeline, which is a big part of the nation's energy strategy to deliver cheap oil.

KARI CUTTING: This is a product that they desire, they want. They have the markets. They have the people. And we're trying to get it there.

SISK: Safety experts say pipelines are a considerably better way to transport oil. Last year alone, there were more than a half dozen major oil train accidents. But still, it's pipelines that remain the focus of opposition by environmental groups.

Jason Kowalski's with the group 350.org and says environmental groups like his oppose pipelines with the hope of keeping oil in the ground. Despite their efforts, drilling continues, and the oil is transported in other ways. But the groups did successfully block the Keystone XL pipeline slated to bring tar sands crude from Canada to U.S. refineries. The Obama administration rejected it last year.

JASON KOWALSKI: People took a warm-up lap with Keystone. We all focused on one pipeline for a few years.

SISK: This pipeline is their latest target. It's here in this remote part of North Dakota where hundreds of people are now camped out in the grassy prairie close to the construction. That site is near but not on the reservation. Further north in Bismarck, trains carrying oil safely cross Missouri River bridges every day. Jon Eagle Sr. is Standing Rock's historic preservation officer. Today he's rallying the protesters with his microphone.

JON EAGLE SR: For two years, we've been holding them off, waiting for you to come. Hey, well, now you're here with us.

(SOUNDBITE OF ULULATION)

SISK: The protests forced a halt in construction last week. The Standing Rock tribe requested a preliminary injunction, arguing that the U.S. Army Corps which approved the pipeline in July failed to adequately consider its impact on sacred sites. A U.S. district court judge heard arguments yesterday and is expected to rule in two weeks.

Meanwhile, North Dakota's governor has declared an emergency in this area, and more than two dozen protesters have been arrested. But protest organizers say they're not going anywhere and are committed to protesting this pipeline peacefully. For NPR News, I'm Amy Sisk.

MCEVERS: Inside Energy is a public radio collaboration focused on America's energy issues.

Dakota Banning (snopes.com)

Social media rumors inaccurately reported water was cut off to Native Americans protesting against the Dakota Access Pipeline.

Updated: Aug 25, 2016

CLAIM: The state cut off water access to Native Americans protesting the Dakota Access Pipeline.

⊗ mostly false

WHAT'S TRUE: The state supplied two supplemental water tanks as part of ongoing support for tribal protests against the construction of the Dakota Access Pipeline, but those tanks were removed after they were determined to be at a secondary site outside the state's jurisdiction.

WHAT'S FALSE: Neither the state of North Dakota nor the federal Department of Homeland Security cut off the water supply to protesters, and the state provided aid and support to Native American protesters situated on a legal encampment.

SOUTH DAKOTA

Looking back: Flash flood soaked area one year ago (Sioux Falls Argus Leader)

Michael Klinski
Arugs Leader- Sioux Falls
Aug. 26, 2016

More than half a foot of rain fell on parts of Sioux Falls Thursday evening, sending flash floods ripping across roadways and pouring into basements. No one was hurt, but the waist-deep waters stranded scores of motorists and left hundreds mopping up wet basements.

Rainfall: More than half a foot of rain fell in parts of Sioux Falls Thursday evening, but the downpours were extremely localized. The National Weather Service recorded 2.61 inches at the airport, while Hartford had less than a quarter inch.

Vehicles: Scores of drivers were retrieving water-logged vehicles Friday morning. The phones were ringing off the hook at local towing companies. AAA reported 138 tows between 9 p.m. and 10 a.m.

Buildings: Home and business owners were mopping up after the storm. Hardware stores saw a run on sump pump and ShopVacs. HyVee on South Louise Avenue had two inches of water throughout the store.

No injuries reported. Sioux Falls Fire Rescue said Thursday night that it had no reports of injuries from the storm.

11:06 a.m. via reporter Mark Walker: A spokeswoman for the Empire Mall says rumors about a partial roof collapse are false. All but three stores were open for business. Yonkers was expected to reopen by 11:30 a.m.

11:04 a.m. via reporter Jill Callison: People with peaked roofs generally will come through a rainstorm like Thursday’s with good shape, although the torrents of water may saturate the ground and flood the basement.

Homes and business with flat roofs, however, may experience damage since the water had no place to go, said Laura Woods of Woods Roofing of Canton.

“With flat roofs, it just fills up and can’t get off fast enough,” she said.

However, her company had received few phone calls as of Friday morning. In large part, in a catastrophic situation, it takes a few days before a situation is assessed thoroughly, Woods said.

UTAH

Utah officials still scrambling to stop flow of toxic silt down American Fork (Salt Lake Tribune)

By BRIAN MAFFLY | The Salt Lake Tribune
First Published Aug 25 2016 07:30PM • Updated 13 minutes ago

Although "best management practices" were to be used to keep Tibble Fork Reservoir's sediments out of the American Fork River, the Utah water district that is rehabilitating the dam drained the reservoir last weekend in a manner that allowed the river to incise a deep channel through 12 feet of potentially toxic muck and push the filth down one of Utah's favorite trout streams. While the water has since cleared somewhat, the sediment releases have continued virtually unabated because water officials cannot shut off releases without dewatering the river.

The North Utah County Water Conservancy District's contractor is now digging a channel and laying pipe to divert the river's flow around 10-acre lake bed, contaminated from a legacy of gold and silver mining in the canyon's headwaters.

"They are working around the clock to do it. We said it would be within four days, and we will beat that schedule," said Brad Price of Provo-based RB&G Engineering, which designed the dam-rehab project. The river's flow should be moving around the lake by the pipe sometime Friday, he said, putting an end to the release of pollution that has been killing fish and fouling the popular canyon outside Provo for nearly a week.

Meanwhile, test results from water samples taken Monday and Tuesday had trickled back, but officials were still analyzing them late Thursday. The Utah Division of Water Quality planned to post the results once analysis was complete. Officials also are awaiting results from sediment and fish samples.

These results are crucial for advising northern Utah County water users how to respond to the crisis. The American Fork River feeds farms and secondary water systems in Highland and surrounding communities where residents were unsure whether they should keep the water off their lawns and gardens. There was enough uncertainty Wednesday that the U.S. Forest Service advised canyon visitors to stay out of the river as a matter of "common sense."

"I chased some kids out of the river [Wednesday] on my way home from work," said Jim Ireland, superintendent of Timpanogos Cave National Monument, which covers about a mile of stream in the lower reaches of the canyon. Monument personnel took water samples Monday that came back showing elevated levels of several metals, according to Ireland.

"We are concerned," he said. "We have a mission to preserve the resources of the monument and this is obviously an impact."

As of Thursday, however, the Utah County Health Department had refrained from advising residents against using the water for irrigating their yards.

Jonny Torrence, an angler who lives in American Fork, is believed to be the first to notice the fouled water when he entered the canyon Sunday evening to take his 3-year-old daughter fishing.

He had fished the canyon three days earlier and pulled 20 brown trout from the river's clear waters. But on Sunday, something was clearly wrong.

"I walked to the river and saw that it was absolutely brown," said Torrence, who snapped photos and alerted a local Trout Unlimited chapter that night. "I walked upriver and saw dead fish everywhere. It was flowing like pudding, it was so thick. By the time I got back to the road, it had gone down 3 or 4 inches because you could see the [deposited sediment] up on the banks that you couldn't see before.

"I was shocked. That's where my dad taught me to fly fish," he continued. "I would have thought it would be managed closer and they would take extreme precautions to prevent something like this."

Officials from the water district and the federal Natural Resources Conservation Service (NRCS), which helped fund the dam project, say precautions were taken and that it was expected that the reservoir draw-down would release some sediment.

However, the environmental assessment on the project indicated that no sediments should have escaped down the river. This is because levels of toxic heavy metals, such as arsenic and lead, are so elevated in the lake bed that the material could not be used as fill on the dam, whose crest will be raised 15 feet.

"The top layer of soil containing heavy metals would be tested, and any locations that exceed screening levels would not be disturbed," states the document, which the NRCS prepared. "These contaminated soils are not expected to be transported downstream and would therefore not affect the surrounding environment. Proper use of BMPs" — best management practices — "and timing of construction would almost eliminate contaminated soils from moving downstream during earth-disturbing activities."

Critics believe the heavy sediment releases would have been avoidable had the reservoir draw-down been better managed. Water flows into the reservoir at a rate of 12 cubic feet per second (cfs) from American Fork River and another 4 cfs from a side stream called Deer Creek, just a few hundred feet upstream of the dam. The plan was to release water at 40 cfs.

The actual rate of release remains a matter of dispute. But whatever the rate, it was apparently too fast, according to Brian Wimmer, president of the Trout Unlimited chapter that has been monitoring the spill and its aftermath.

A properly controlled release would have slowed the water flowing across the sediment bed once the reservoir emptied.

Yellowstone Park Fires [MAPS] Latest Updates on Maple, Buffalo and Fawn Fires in Wyoming, Montana Border (Latin Post)

By **Glenn Minnis** (**staff@latinpost.com**)

First Posted: Aug 25, 2016 06:45 AM EDT

The largest of four wildfires now simultaneously burning in Yellowstone Park (Maple, Buffalo, Fawn, Boundary fires) has Wyoming fire officials scrambling in a desperate effort to keep it from spreading to areas housing some of the park's tourist attractions.

As of Monday, all of the park's main tourist facilities remained open, even though the **Maple fire** (the biggest blaze among the four fires) is reported to have grown by nearly 10 square miles in a span of a few hours, prompting authorities to order more firefighters to the area. As authorities keep a vigilant eye on the nearby Madison Junction area of the park reserved for hiking, fishing and other activities, firemen are now working around the clock to contain the blaze. A 10-mile stretch of road leading to Yellowstone's South entrance has already been shuttered.

Conditions Hampering Firefighters

Thus far, warm and windy weather has hampered efforts to contain the flames, which have charred approximately 35 square miles of primarily remote forest land. The proximity of the fire is reported to be between West Yellowstone, Montana, a town of about 1,300 situated just outside the park's western boundaries, and Madison Junction, a recreational area that sits within the park's confines.

Containment Essential

"As it's pushing off to the north and east, there's not a lot of values at risk as far as infrastructure goes," said Mike Johnson, a spokesman with the National Park Service. "We're going to keep the fire to the north of the West Entrance Road, and we have plans in place that if the fire were to move to the west toward West Yellowstone."

Madison Junction is also home to a campground, some visitor facilities and staff housing. It's described as where West Entrance Road intersects with the park's Grand Loop Road, linking such major tourist attractions as Old Faithful and Yellowstone Lake.

Johnson added firefighters are also busy battling the three smaller fires that have swept across the area.

As of early in the week, the Maple fire remained confined to about three miles away from Madison Junction and about four miles from the West Yellowstone Entrance station. On Sunday, the blaze spread several thousand more acres to now consume roughly 27,000 acres in total.

Meanwhile, authorities are now monitoring the two-week old, lightening caused Fawn fire by both ground and air with the acerage of the blaze currentlyb at around 1,800 acres.

The Buffalo fire in Tatanka Complex about 3 miles northeast of Tower Junction has simmered a bit and is now being managed via monitoring and so-called point-protection strategies.

Fire and ice hinder travel into Yellowstone National Park (Billings Gazette)

YELLOWSTONE NATIONAL PARK — Both fire and ice briefly hindered travel into Yellowstone National Park on the National Park Service's centennial anniversary.

Authorities closed a portion of the Beartooth Highway Wednesday night due to snow and ice from a summer snowstorm. Crews cleared the roadway and reopened it Thursday morning.

The popular two-lane mountain highway runs from Red Lodge, Montana, over the Beartooth Pass to Yellowstone's Northeast Entrance.

At the other end of the park, a wildfire has closed a portion of the road leading to Yellowstone's South Entrance since Monday.

Visitors heading to Thursday's celebration and concert in Yellowstone from the south face an hour-long detour into Idaho.

Greens try to reassemble anti-pipe dream team (Politico.com)

By Eric Wolff

08/25/16 10:00 AM EDT

With help from Bob King and Zachary Warmbrodt

LET THEIR POWERS COMBINE TO STOP PIPELINE: Environmentalists are trying to reassemble the dream team that blocked the Keystone XL pipeline, only this time to prevent construction of the Dakota Access pipeline from North Dakota to Illinois, which is nearly as long. As Pro's Elana Schor reports, most greens have been devoting their energy to the presidential election, leaving smaller groups, and in this case the Standing Rock Sioux Tribe, to wage battles to stop infrastructure alone. "What should have happened after Keystone got rejected was a huge influx of resources to local and state groups fighting pipelines," said Bold Alliance founder Jane Kleeb, a leader of the movement against the Canada-to-U.S. pipeline who is now leading a four-state push against eminent domain for fossil-fuel projects. "That didn't happen." A Wednesday protest in D.C. featured the Sierra Club and 350.org as well as Hollywood actresses/activists Susan Sarandon, Shailene Woodley, and Riley Keough.

Freudian slip from judge? The Sioux have challenged the line, and in a hearing in federal court on Wednesday, the judge on the case may have signaled his openness to putting a temporary hold on the project. He laid out the schedule for "when I issue my injunction." Supporters of the Sioux, who feel developers did not consult them sufficiently on the project, believe the remark could signal the judge's sympathy for their views.

Follow the money: For anyone interested in seeing all the players involved in funding Dakota Access, the Bakken Pipeline Resistance Coalition has created an interactive, visual display of the different investors in the project.

…

FLOOD INSURANCE POLITICS IN LOUISIANA SENATE RACE: With the residents of Baton Rouge desperately trying to recover from flood waters, flood insurance has become a major feature of the state's senate race to replace retiring Sen. David Vitter. Louisiana Insurance Commissioner Jim Donelon endorsed Republican Rep. Charles Boustany for Senate, arguing that he is "the only candidate I trust to fight for affordable flood insurance." Congress faces a September 2017 deadline to reauthorize the government-run National Flood Insurance Program. "I look forward to working with Commissioner Donelon to write common-sense flood insurance policy as Louisiana's next United States Senator when Congress begins work on reauthorizing the National Flood Insurance Program in 2017," Boustany said in a statement.

…

NO ONE WANTS COMMUNITY-BASED FLOOD INSURANCE: The Government Accountability Office on Wednesday backed FEMA's conclusion that community-based flood insurance isn't workable. As Finance Pro's Victoria Guida reports, FEMA was considering the option, under which communities could band together to buy flood insurance plans, but an analysis it released in March found the challenges too great to overcome. Now the GAO is supporting FEMA's conclusion. "The challenges outlined in the study outweigh any potential benefit when considered against limited community interest," GAO wrote. The National Flood insurance Program faces numerous challenges, not least its $23 billion in debt.

DECREPIT FLORIDA DIKE VULNERABLE TO LOOMING STORM: A potential tropical storm or hurricane developing in the Caribbean may be headed for Florida in the coming days, based on last night's outlooks from the National Hurricane Center — posing exactly the scenario the Army Corps of Engineers has feared as it struggles with excessively high water levels in Lake Okeechobee. Earlier this summer, the agency reduced flows from the large inland lake amid pressure from residents and GOP Gov. Rick Scott to stem the flow of nutrient-choked runoff that fed toxic algae along the Treasure Coast. But that means lake levels remain higher than usual going into the busiest part of hurricane season — increasing the pressure on the leaky, decades-old dike that protects the lives of tens of thousands of residents.

Even a weak storm could cause big problems if it dumps tons of rain. As of Wednesday, lake levels were at 14.67 feet above sea level, while 17.5 feet is the level at which the corps believes the dike becomes unstable. The lake is the site of one of the deadliest disasters in U.S. history, a 1928 hurricane that killed more than 2,500 people.

Too little, too late: Today the corps will announce its management plans for the week ahead, but by the time you can see a storm coming it's too late to do much. "We just can't release water that fast," said John Campbell with the corps' Jacksonville district. In fact, a few days out the corps has to stop making releases from the lake so they don't flood communities downstream when the storm comes.

Florida Hurricane Forecast Remains Uncertain, But Trends In State's Favor (Yahoo News)

By Andrew Freedman

Yahoo! News, August 25, 2016

For days, a war has been raging between two of the premiere computer models used to help predict the weather. On the one side, there's the National Weather Service's Global Forecast System, or GFS, which has maintained that a tropical wave moving across Puerto Rico and Hispaniola will not intensify into a hurricane and strike Florida this weekend.

But other models have consistently outshone the GFS in both routine and high impact, high risk forecast situations.

On the other side of the battle is the European, or Euro model, which is run by the European Center for Medium Range Weather Forecasting in England.

The Euro, which gained notoriety by catching on to Hurricane Sandy's unprecedented and catastrophic left hook into New Jersey a week in advance, has rattled Florida with its depiction of an intense tropical storm or hurricane hitting the southern part of the state this weekend.

Run after run, the Euro had stuck to its guns for the past three days, insisting that the area of inclement weather designated as "Invest 99L" would soon become Hurricane Hermine, potentially going on to menace Gulf Coastal states as a major hurricane of Category 3 intensity or greater.

The battlefield may have just changed significantly, though. It's unclear if a peace treaty has been signed, or if this is just a temporary lull in the fighting, but the afternoon run of the Euro model trended toward the GFS solution of a weaker storm.

In other words, it is no longer showing an intense storm hitting Florida on Sunday, and then intensifying over the unusually warm waters of the Gulf of Mexico.

This news is being met with cautious relief on social media. For example, Miami NBC-TV meteorologist John Morales welcomed the new computer model trend.

Weather Channel meteorologist Justin Abraham comically celebrated what he sees as a potential GFS victory over the top-seeded European model.

However, Floridians shouldn't let down their guard yet, since the swirling cloud mass located north of Haiti could still persevere despite two main challenges.

Invest 99L has been contending with layers of dry air that have stifled the development of thunderstorms near the center of the storm. Such thunderstorms are needed in order for the weather system to form a closed area of low pressure at the surface and intensify.

The wind shear is forecast to diminish starting in about 24 to 36 hours, at which point it's possible both the Euro and GFS will be wrong, and the storm will intensify rapidly.

"Although upper-level winds are not conducive for significant development during the next day or so, they could become a little more favorable over the weekend or early next week when the wave is expected to approach southern Florida or the southeastern Gulf of Mexico," the National Hurricane Center said in a 2 p.m. ET statement on the weather system.

The Hurricane Center lowered Invest 99L's chances of developing into a tropical depression, tropical storm or hurricane to 70 percent through 5 days, down from 80 percent earlier in the day.

For now, Invest 99L looks like a poor excuse for a tropical weather system that is inspiring trepidation in a coastal state like Florida. Its center is exposed and comprised only of low-level clouds, and the largest thunderstorms are displaced several hundred miles away from the center.

In short, it looks like garbage, from a tropical meteorology perspective.

Whether it turns into something more impressive remains to be seen, but for now, it’s encouraging that the great model war of August 2016 may be coming to an end.

ANALYSIS

- **Colorado:** A hailstorm and flash flood in Colorado Springs made the CBS national news. Some drivers needed rescuing; up to two feet of hail was reported…. The *Colorado Springs Gazette* carried an AP story in which a Florida congressman said FEMA's response in Louisiana, with only one mobile home set up so far, was "pitiful."
- **Montana:** The south entrance to Yellowstone has been reopened after being closed because of wildfire… Two stories report on the economic impact of the fish kill in the Yellowstone River. Governor Bullock declared an emergency, making state unemployment and retraining aid available. Some businesses hope for SBA loans to help them survive the lost tourism…. A roundup of wildfires indicates general stabilization.
- **North Dakota:** Pipeline protest stories include one from the Christian Science Monitor and one from The Guardian. The Guardian story cites protesters saying their effort might fulfill old Indian prophecies. … United Blood Services will test the blood of only donors who might be at risk for the Zika virus. The FDA had recommended testing all donors, but the disease is rare in North Dakota. … An attorney argues in favor of a proposed safety rule that would require more than one person be aboard some freight trains.
- **South Dakota:** No stories today.
- **Utah:** *The Salt lake Tribune* reports on the status of four major wildfires in the state… The *St. George Spectrum* reports that two Michigan firefighters were killed Saturday in Minnesota on their way to fight the Box Canyon Fire in Utah when their truck left the road. The driver has been charged with criminal vehicular homicide; he allegedly fell asleep while driving, and had used marijuana earlier that day.
- **Wyoming:** *The Teton Valley News* reports on the status of the Berry Fire and, in a separate article, notes another fire and recent earthquake and urges preparedness.
- **Other FEMA-related stories**: NBC News, along with other outlets, reported on existing drugs that might help fight the Zika virus.

COLORADO

CBS: Colorado Springs Flooding. The CBS Evening News (8/29, story 5, 0:15, O'Donnell, 11.17M) reported, "Heavy rain and hail caused flash flooding today in Colorado Springs. Streets became rushing rivers. It came on so quickly, drivers got stuck. Their cars had to be pulled out of the flood waters."

Wild weather causes flooding, hail on Colorado Springs streets (KKTV news, Colorado Springs)

Posted: Mon 5:38 PM, Aug 29, 2016 |

Updated: Tue 5:46 AM, Aug 30, 2016

COLORADO SPRINGS, Colo. (KKTV) Wild weather roared through Colorado Springs Monday afternoon, quickly causing streets to flood and keeping emergency personnel busy.

Several drivers were caught in the rapidly rising water. Just east of downtown on Pikes Peak Avenue, four people inside one car, including a toddler, had to be rescued after the vehicle got stuck in fast-moving water.

"I saw that it only came up to the middle of the hubcap there, so probably up to my knees," said Sgt. Erick Frederic with the Colorado Springs Police Department, who pulled the victims from the car.

No one was hurt in the incident, but were all left pretty shaken up.

"That's always a scary thing because if there becomes more water then the car could be pushed over," Frederic said. "So it's a matter of yes, stay in there until the car stops moving, but you don't want to get stuck in a moving car either."

Plenty of others were left stranded after water came rushing down streets.

“It’s kind of scary, cause you don’t know what might happen," said Susan Kellman.

Near Bijou and Logan, a snowplow that was trying to move nearly 2 feet of hail off the street ended up having to be towed.

Zach Smith faced another obstacle. His car was picked up by moving water and floated down the street.

"I was at work and my neighbor gave me a call and said, 'Hey, your car’s in the middle of the road; you should probably come move it,'" he told 11 News.

When Smith got home, he found the car sitting sideways, literally in the middle of the street.

“It’s pretty crazy. I’ve seen some pretty heavy rains, but not one to float a parked car like that.”

Another problem spot was off Platte Avenue near Tia Juana. A car got stuck near Fargo's Pizza after water quickly overtook the roadway.

Other areas of Platte, just east of Union, were underwater after storm drains got clogged by the amount of water running down the street.

"It's mayhem. You never know what you're going to get in Colorado. First we have hail, then we get some flooding," said Phillip Groskinsky.

HOMES DAMAGED BY FLOODING

Homeowners near Platte and Wahsatch in Colorado Springs say a dog was killed when fast-moving water got into their garage.

The Pikes Peak Red Cross went to more than 60 homes on Monday. Although not all were damaged, some were left unlivable.

Tim and Debbie Hertzog had their fence destroyed by rushing water, their backyard deck lifted up, and thousands of dollars worth of damage to the inside their home.

Debbie said she came home in the middle of the storm and got trapped in her garage.

"I just saw sheets of rain coming down, so I rushed home. ... As soon as I pulled into the garage, the river coming down the alley came into the garage with me," Debbie recalled. "I couldn't open the door without it coming in. So I called 911...they told me to stay sheltered in place in my car, unless [the water] came in the car.

"It did come to about a quarter of an inch, to the bottom of my car, while I was sitting in there. And I was probably in there an hour and a half, or maybe close to that, and I had no idea what was going on with my house. ... I couldn't get out either door without an onslaught of water. There was so much water."

Tim described the outside as chaos.

"She called me, so I came home and I was trying to get her out of the garage, but the water was almost 18 inches over the garage door, couldn't get the garage door open, so we just had to wait for the waters to subside.

"We weren't sure how bad it was going to get; if it was going to get worse."

Near Palmer Park and Union, one family said they worry about flooding -- like what happened Monday -- any time it rains.

"It's not something to mess with," said Jessica Staten. "If you can't see the road, don't go through it, plain and simple."

Staten snapped video of a car and truck stuck in high water at Mount Vernon Street and Tweed Street. Firefighters were eventually able to help both out.

"This intersection is prone to getting flooded pretty bad," Staten said. "It was already up to the wall of my neighbor, the wall where his fencing is, so there's no way you would have been able to clear it with a car. The minute he [one of the drivers] hit the dip, he was gone. He was done."

It was a similar scene near Fountain and Circle. Kellman saw others get trapped trying to plow through standing water. She decided not to chance it.

"It's scary because you don't know what might happen. I mean, there's lots of accidents, too," Kellman said.

"I just pulled over and waited for it to stop."

FEMA criticized as slow on disaster housing aid in Louisiana (Colorado Spring Gazette)

By: MELINDA DESLATTE, Associated Press •
August 29, 2016• Updated: August 29, 2016 at 12:43 pm

BATON ROUGE, La. (AP) — The first out-of-state congressman to survey Louisiana's damage from catastrophic flooding Monday blasted the Federal Emergency Management Agency response as "pitiful."

U.S. Rep. John Mica, a Florida Republican who chairs a subcommittee with jurisdiction over FEMA, toured the destruction with U.S. Rep. Garret Graves, a Republican who represents much of the most heavily damaged region.

Mica said housing aid for the tens of thousands of people displaced by floodwaters two weeks ago has been sluggish and FEMA has been too slow to set up mobile homes that give people somewhere to stay while they repair their houses.

He said FEMA needs more "flexibility" in its programs to make them more adaptable to individual disasters.

"This is one of the biggest displacements of people I've ever seen in the country, and the response is pitiful from the federal level," Mica said.

Only one manufactured housing unit has been set up so far. FEMA regional director Gerard Stolar said the agency is working to speed aid to people displaced by the flooding.

"We're working very closely with the state. We're well aware of the devastation that's out there, that this is an historic event," Stolar said.

He said that FEMA's priority is to get people back into their homes and that 50 to 60 additional manufactured housing units are ready to be set up for homeowners after inspections of their property are complete.

"I'm very confident we're going to be able to ramp up the capacity for this in the very near future," Stolar said.

More than 100,000 homes are estimated to be damaged from flooding described as the worst disaster since Superstorm Sandy, after a storm that started Aug. 12 dumped as much as 2 feet of rain in some areas over two days.

More than 1,400 people remained in shelters Monday.

Entire communities were ravaged by floodwaters, and residents and volunteers have spent the last two weeks ripping out flooring, damaged furniture and drywall to ready homes for repairs. But many people didn't have flood insurance, leaving them dependent on savings and FEMA for rebuilding assistance.

Federal officials say more than $277 million in recovery grants have been approved for households so far and 22 assistance centers are open across the damaged parishes. FEMA said it has more than 1,100 housing inspectors on the ground.

Gov. John Bel Edwards has praised the federal response.

Graves, however, said FEMA needs to quicken the pace of its inspections and grant approval. He also worried about the size of grants. While the cap on assistance to households is $33,000, Graves said the largest grant received is around $8,000 so far.

"People are sitting there, looking at their home and business situation. They've got to make decisions," Graves said.

Edwards' administration opened registration Monday for a new, FEMA-funded "shelter at home" program aimed at providing grants of up to $15,000 to help people make modest repairs that can get them quickly and safely back into their houses while they start work on the larger renovations.

Graves said that program was a "fantastic" concept.

Both congressmen said some of the flexibility they'd like to see in FEMA programs could require congressional action. Edwards was meeting with Louisiana's congressional delegation Monday to discuss a flood relief package.

MONTANA

Yellowstone's south entrance reopens Tuesday morning (Billings Gazette)

The south entrance to Yellowstone National Park reopened at about 7 a.m. Tuesday after a wildfire cut off access for several days, said Larry Helmerick, National Park Service public information officer.

The more than 13,000 acre Berry fire shutdown a stretch of Highway 89/191/287 between Jackson Hole and the south entrance of Yellowstone. Pullouts near the burn area will remain closed, said a National Park Service news release.

The Berry fire cutoff access to the south entrance on Aug. 23 but no roadways inside Yellowstone National Park were affected.

Governor declares state of emergency for Yellowstone River fish kill
(Bozeman Daily Chronicle)

By Michael Wright Chronicle Staff Writer

LIVINGSTON —Montana's governor on Monday signed an executive order declaring the fish kill on the Yellowstone River earlier this month an emergency, a move that makes available millions of dollars for unemployment benefits and other labor programs.

The order frees up $15.4 million in emergency funds for workers and businesses affected by the river's closure, accessible to them mostly through unemployment insurance, retraining programs and planning grants.

Patricia Dowd, a natural resource policy adviser for the governor, announced the order at a meeting here on Monday, where officials from the Montana Department of Labor and Industry tried to offer people guidance on how they could get help in this time where businesses built on the tourism economy are taking a major hit.

"The Yellowstone River is a key contributor to Montana's tourism and outdoor recreation economy," Dowd said.

Earlier this month, Montana Fish, Wildlife and Parks closed 183 miles of the Yellowstone River and hundreds more miles of its tributaries to all public use in response to the deaths of thousands of whitefish in the river. Dead fish were found as far upstream as Corwin Springs and as far downstream as Springdale. Mostly whitefish have been found dead, and FWP estimates the total death toll to be in the tens of thousands.

Tissue samples showed the culprit to be a parasite that causes proliferative kidney disease, which can decimate trout and whitefish populations. An FWP press release sent Monday said whitefish have tested positive for the parasite as far downstream as Laurel and that the parasite had been confirmed in two brown trout taken from Nelson's Spring Creek.

The river and tributaries were closed as a way to reduce stress on the fish so they might be able to fight off infection. It also was meant to prevent the spread of the parasite to other watersheds in Montana. But the move has significant economic consequences for people who depend on the tourism dollars that the river brings in — like fishing guides, raft companies and hotels and restaurants.

The governor's emergency declaration allows the state to dip into a $16 million fund to offer assistance to people out of work or who have lost money because of the river closure. About $600,000 from that fund has already been spent in response to a heavy winter storm along Montana's Hi-Line and a tornado in eastern Montana.

How much is spent from the fund depends on how many people are able to access the money, which may be tricky. Unemployment insurance, for example, might not be available to fishing guides who work as independent contractors.

For workers to be eligible, they have to work in a job where their employer pays payroll taxes — which might not be the case for all independent guides. But if they work seasonally at another job that does pay those taxes throughout the year and quit to guide in the summer, they may qualify for some benefits.

Paul Martin, who works in unemployment insurance claims processing for the Montana Department of Labor, said people won't know if they qualify unless they apply because each individual case is so different.

"It's like snowflakes," Martin said.

Some at the meeting on Monday said they weren't interested in being retrained, and others said they would probably try for a loan from the U.S. Small Business Administration — which is federal money, not state — to keep their doors open into the next year.

"I think I'm looking at a small business loan," said Jim Kahl, the co-owner of River Source Rafting Company north of Gardiner.

Kahl said the last few weeks have been "pretty dismal," and that the final weeks of the season are crucial for his company. A loan would be the way to make sure they are around for next season.

Tina Marshall, the ranch manager at 7 Point Ranch in Emigrant, said she hopes the emergency declaration would help them file a successful loss-of-income claim with their insurance company. The ranch hosts events and offers lodging to travelers, and Marshall said they had lost $43,000 in cancellations since the closure.

"It adds up fast," Marshall said.

She said an initial attempt at filing a claim was rejected, but that the emergency declaration might help with that. Recovering that income would help her keep her staff intact.

"I don't want to lay anybody off," she said.

When the river or its tributaries will reopen is unknown. FWP closed the river using an emergency 120-day closure, but that could be extended if river conditions don't improve or if fish don't stop dying. The Montana Fish and Wildlife Commission would have to approve any extension and solicit public comment.

FWP crews are still regularly surveying the river and the tributaries. The press release from the agency on Monday said that they were starting to find fewer dead fish on the banks of the river.

Yellowstone River's closure worries outdoors industry (AP)

Matthew Brown, Associated Press

Updated 7:01 pm, Monday, August 29, 2016

LIVINGSTON, Mont. (AP) — Tens of thousands of dead fish have closed Montana's Yellowstone River and stirred new worries Monday about lasting impacts to the region's lucrative outdoors industry.

Gov. Steve Bullock declared an "invasive species emergency" over an aquatic parasite blamed for the dying fish. A 183-mile stretch of the Yellowstone and all waterways that drain into it have been closed since Aug. 19 to prevent the deadly parasite from spreading. The unprecedented move came after thousands of dead mountain whitefish started washing up on the river's banks downstream from Yellowstone National Park.

Smaller numbers of other fish species have been killed. That's offered hope that the parasite will spare the trout populations that made the Yellowstone a destination for fly fishers from around the world.

But uncertainty over how long the closure will remain in force — and whether the parasite will crop up again in future years — has unsettled those whose livelihoods depend on the river.

Fishing guide Chase Chapman of Livingston said he's losing tens of thousands of dollars' worth of business as customers cancel previously booked trips. The losses are likely to grow as the closure continues, he said. Yet Chapman is not interested in training for another occupation and foremost wants to know when the river will re-open.

"I don't think anyone wants re-training," Chapman said Monday, during a workshop in Livingston for affected workers that was hosted by the state Department of Labor and Industry. "We all have established businesses. We're not going anywhere.... Now what do we do?"

Monday's emergency proclamation from Bullock will allow Montana to spend up to $15.4 million on worker retention grants and other programs meant to blunt the economic harm of the closure, state officials said.

The number of people and businesses that lost work over the closure has not been tallied, said Scott Eychner, workforce services administrator of the state labor agency. Eychner said officials did not want to wait until that information was tallied before holding Monday's workshop, so that assistance could be given to those who need it as quickly as possible.

Repairing the river's reputation is another matter.

Paul Weamer, who manages a fly fishing shop in the Paradise Valley north of Livingston, said he has no doubt the Yellowstone and its fishery will recover. But Weamer said news reports of the fish kill have left a negative impression among outsiders that will be hard to overcome even when the Yellowstone reopens and fishing resumes.

"You hear dead fish and that freaks people out and I understand that. But I really think our fishery will be good next year," Weamer said.

State officials on Monday said infected fish have been discovered in Laurel, more than a hundred miles downstream from the epicenter of the fish kill. A small number of whitefish that were collected near Laurel have tested positive for exposure to the parasite, officials said.

Whitefish exposed to the parasite also were collected near Columbus, Big Timber and at the mouth of the Boulder River, but officials said all the downstream fish were still alive and appeared healthy.

The rate of fish dying appears to have eased in recent days, said Sam Sheppard, regional supervisor for Montana Fish, Wildlife and Parks.

Sheppard added that it was too soon to say if the decrease in deaths would prove lasting.

Officials have warned outbreaks of the parasite are possible in future years now that it's been established in the Yellowstone.

Montana Wildfire Roundup For August 29, 2016 (Montana Public Radio)

By MTPR News •

The latest on wildfires around western Montana.

Last Update 5:35 p.m. 08/29/16

The Clear Creek Fire popped up early Saturday morning on tribal land 3 miles northwest of Perma on the Flathead Reservation.

It’s just over 1,200 acres, and zero percent contained, says Tribal Fire Prevention Specialist C.T. Camel.

"Last couple days just been burnout operations, trying to get a hold of it. Because it’s gonna get really warm these next couple days.”

The Confederated Salish and Kootenai Tribes’ Division of Fire is fighting the blaze.

It’s cause is still under investigation.

Update: 10:38 a.m., 08/29/16

The Copper King Fire, under the command of Greg Poncin's Type I Incident Management Team, has reached 24,017 acres and remains 15 percent contained.

A community meeting will be held on Monday, August 29 at 7:00 p.m. at the Sanders County Fairground Pavilion (30 River Road, Plains, MT). Fire and local officials will provide an update on current and project fire activity.

There are 780 personnel working the fire, located eight miles outside of Thompson Falls and one mile north of Highway 200. The Copper King Fire has cost an estimated $15 million so far.

Yesterday aerial resources conducted burnout operations on the northern perimeter while hotshot crews built hand lines around the active southeast edge.

Helicopters dropped 258,000 gallons of water while small planes spread 36,500 gallons of retardant.

Today's weather is expected to bring in a high pressure front, with low humidity and high temperatures. This could result in increased fire activity, though winds are not predicted to be a problem.

Over the next 24-48 hours, officials say the construction of indirect lines and firing operations are crucial. Scoping for additional contingent lines will continue for the benefit of communities to the east.

In Yellowstone National Park, the Berry Fire continues to keep the south entrance to the park closed.

The Maple Fire in Yellowstone National Park, located about four miles north of West Yellowstone, has reached 31,405 acres. All of Gneiss Trail remains closed, including the Cougar Creek cabin.

The Maple Fire has yet to reach the Madison River or Madison Junction, and has not yet required burn out operations near Highway 191. A Red Flag weather warning is in effect throughout today.

Diane Hutton's Wildland Fire Management Team has assumed command of the Maple Fire and is stationed in West Yellowstone.

There will be a Maple Fire community meeting Monday, August 29 at 7:30 p.m. at the Church of Latter Day Saints, 245 Faithful St., West Yellowstone, MT.

The Bierney Creek Fire west of Lakeside is transitioning from a Type 3 team to a smaller Type 4 team as containment operations continue to be successful. The fire is 90 percent contained.

The 60 acre fire, discovered on August 22, has been declared 'human caused' by fire officials.

The Roaring Lion Fire located five miles southwest of Hamilton remains at 8,533 acres and 70 percent contained. Firefighters continue to put out hotspots, evaluate containment lines, protect structures, and monitor for erosion possibilities where they have built defensive lines.

Helicopters and fixed wing aircraft continue to drop water and retardant when necessary. Area closures remain in effect.

NORTH DAKOTA

Oil pipeline protests in North Dakota draw Native Americans, celebrities
(Christian Science Monitor)

The Standing Rock Sioux Tribe's protests against a four-state oil pipeline have drawn members of other tribes, as well as a few Hollywood stars.

By Jason Thomson, Staff August 29, 2016

Oil pipelines are no strangers to controversy, often courting a wide range of opposing opinions: Witness the years of debate that plagued the Keystone XL project between the United States and Canada, eventually blocked by US President Obama in November 2015.

The latest project to attract the ire of protesters, a 1,100-mile pipeline already under construction, is set to pass through four US states – Iowa, Illinois, North Dakota, and South Dakota. Its aim is to transport Bakken shale from North Dakota directly to US Gulf Coast refineries, the first pipeline to do so.

The core group of opposition is the native American Standing Rock Sioux Tribe, which says the pipeline could disturb sacred sites, as well as contaminate water for millions of people. They have been joined by activists from dozens of different tribes, and the protest, which began in April, now boasts upward of 1,000 indigenous participants.

"The things that have happened to tribal nations across this nation have been unjust and unfair, and this has come to a point where we can no longer pay the costs for this nation's well-being," Dave Archambault, chair of the Standing Rock Sioux Tribe, told Democracy Now last week. "All too often we share similar concerns, similar wrongdoings to us, so we are uniting, and we're standing up, and we're saying, 'No more.' "

The protests have temporarily shut down construction, and about 30 people have been arrested in recent weeks. The group behind the pipeline, Dakota Access, filed a restraining order against Mr. Archambault and other protesters earlier this month in federal court; the tribe subsequently sought a preliminary injunction to halt construction.

As legal proceedings unfolded over the $3.7 billion project last week in the US District Court for the District of Columbia, about 100 members of the native American group protested outside. They were joined by actors Susan Sarandon, Riley Keough, and Shailene Woodley.

"I'm here as a mother and a grandmother," said Ms. Sarandon, an Oscar-winning actress known for social and political activism, "to thank the people of the Standing Rock community for bringing our attention to this horrible thing that is happening to their land, which in turn will endanger all of us... because all of our waters are connected."

As part of their legal case, the protesters say the US Army Corps of Engineers violated historic preservation and environmental laws by giving the pipeline their approval. Supporters counter that the project would, in fact, provide safer and cheaper passage for the Bakken shale, when compared with road or rail transport.

District Court Judge James Boasberg is expected to announce his decision on the preliminary injunction requested by the tribe no later than Sept. 9.

'We're not going home': inside the North Dakota oil pipeline protest (The Guardian, US edition)

Nicky Woolf in Cannon Ball, North Dakota

Monday 29 August 2016 16.16 EDT
Last modified on Tuesday 30 August 2016 10.53 EDT

The Cannonball river flows into the mighty Missouri about 50 miles due south of Bismarck, North Dakota.

At its confluence, a protest encampment – really a series of camps, on both sides of the Cannonball, strewn with kitchens and canteens, portable toilets, stabling for horses, sweat lodges and tall teepees, and stands selling indigenous art – has sprung up.

The inhabitants are there to block the planned $3.7bn Dakota Access Pipeline, which would transport fracked crude from the Bakken oil field in North Dakota to a refinery near Chicago.

Many at the encampment speak of two prophecies, dating back to the 1890s. A leader called Black Elk foretold that in seven generations, the Native American nations will unite to save the Earth; another legend predicted that a zuzeca snake – a black snake – would threaten the world. For many of the protesters here, the pipeline is that black snake. They are the seventh generation: their moment of destiny has come.

The pipeline's planned route takes it close to the northern boundary of the Standing Rock Sioux reservation and the town of Cannon Ball within it, which means it would cross the Missouri immediately upstream, endangering, protesters say, the reservation's drinking water and threatening sacred sites. At Standing Rock, they have put their bodies between the water and the oil.

A few days earlier, on 24 August, a federal judge in Washington DC delayed a ruling over whether indigenous rights were violated by the approval of the project. Tribal members say they were not sufficiently consulted about the route and are suing for an injunction.

The population of the camp ebbs and flows. Many have given up jobs and brought their families here, and a core of between 500 and 1,000 people live here semi-permanently. Some, such as Wiyaca Eagleman, a member of the Sicangu Lakota from Rosebud, South Dakota, have been here since the beginning of April. He plans to be here, he said, "as long as it takes".

Hundreds more join when they can, swelling the camp's numbers on weekends. Others come when they get time and bring what supplies they can.

It is an unprecedented gathering. Members of more than 90 Native American nations and tribes have a presence here, according to Eagleman, who has become a sort of unofficial spokesman for the protest camp. Up the road, where the building site was besieged, the flags of many of those nations now fly together. The unity on display here is a dream come true for Eagleman. "There has been no moment like this in history," he said.

On Saturday, a delegation from the Crow nation arrived from Montana, bearing offerings of firewood and 700lb of buffalo meat. That's truly historic: the Crow and the Lakota have been enemies for more than a century. They were at war once; the Crow acted as scouts for Gen George Custer. Buffalo meat has powerful symbolic value: a gesture of solidarity and friendship from longtime former foes.

Dennis Banks, a member of the Chippewa nation of Minnesota and one of the founders of the civil rights group the American Indian Movement in the 1960s, who met the Crow delegation, recounted the meeting. "The main speaker said, 'I know you think of Crow as working with the enemy – but we too struggled for water rights, treaty rights'," Banks said.

Omaka Nawicakinciji of the Oglala Lakota Nation in South Dakota participates with his mother Heather Mendoza during a rally on the Dakota Access Pipeline. Photograph: Alex Wong/Getty Images

Then he paused. "The Missouri river starts up there," he added, to indicate that the Crow and the Lakota share more, now, than just food and firewood. The river connects them, too.

Ladonna Allard is a member of the Dakota Sioux. The first protest camp, named Sacred Stone for the perfectly round stones that were formed by a whirlpool where the two rivers met, was erected in April on Allard's land. The whirlpool is gone now, its eddies quieted by a dam built by the army corps of engineers in 1948, which also flooded the lush forest that abutted Allard's birthplace.

"This is sacred land," Allard told the Guardian, speaking by a campfire on which burritos cooked in aluminum foil. Children and dogs played; a brilliant sunset had just turned to dusk. "This is not about trying to be a protester," she said. "I am a mother. My son is buried at the top of that hill. I can't let them build a pipeline by my son's grave."

Looking across the Missouri from the camp, you can see the route of the pipeline on the east bank. Diggers and bulldozers began digging out the turf on the west bank, a mile north of the camp, churning the green prairie to brown clod, in August – accompanied by armed security guards.

They were ordered to stop when protesters, some on horseback, broke on to the site and surrounded the machines on 10 August. Eighteen were arrested, including Standing Rock tribal chairman David Archambault II.

Madonna Antoine Eagle Hawk, a member of the Sicango Rosebud Sioux, arrived last Friday and quickly assumed the role of head chef of the Rosebud camp. The children, she said, call her "Unci", the Lakota word for grandmother. "I'm proud to be here," she said. "It's a powerful feeling."

"Right now, all these different tribes – this will never happen again in our lifetime," she said. "If we don't make a stand, who else will?"

Richard Leading Fighter Jr – another member of the Rosebud tribe, a biology student and a distance runner – joined Eagle Hawk in the kitchen tent. He has assumed the role of lifeguard in the camp, keeping an eye on the children who frolic and splash in the Cannonball. He's been here two weeks now and is preparing to return to university, but like many in the camp, is planning on coming back when he can.

"This feeling is history, right here," he said. He hunkered down on his shins to grab a handful of soil, grey from the ash of the cooking fire. "We're doing something that will be in stories told for our grandchildren," he said, as the earth streamed through his fingers.

"I know we can defeat this," he said. "I'm hoping the world is with us."

United Blood Services testing some blood for Zika (Bismarck Tribune)

- JENNY SCHLECHT Bismarck Tribune
- Aug 29, 2016

United Blood Services is testing the blood of all donors at risk of having contracted the Zika virus.

Zika is spread mostly by infected Aedes species mosquitoes, which are not found in North Dakota. While most people get mild symptoms from the virus, it can be transmitted from a pregnant woman to her fetus and can cause birth defects, including microcephaly and other brain abnormalities. There is no vaccine or medicine for Zika.

The Food and Drug Administration last week recommended testing all donated blood nationwide for Zika. The agency previously had recommended deferring anyone at risk of having contracted the virus.

Marni Wild, district director of manufacturing and laboratory services at United Blood Services, said the FDA only is recommending — not requiring — all blood to be tested. UBS, which handles blood donations in North Dakota, has been testing the blood of donors at risk of having contracted the virus since before the FDA made the recommendation as a precautionary measure, she said.

Michelle Feist, epidemiology and surveillance program manager at the North Dakota Department of Health, said active transmission of Zika is not happening in North Dakota, because the types of mosquitos that carry the virus are not found in the state.

However, people can contract the virus if they travel to a place with Zika or if they have sex with someone who has Zika. Wild said UBS asks questions during its pre-donation screening to see if donors are at risk of having Zika; if so, their blood automatically is screened before being used.

Wild did not know how much each Zika test costs UBS, but she said there is a financial hit on the organization each time a new test is added. She asked that anyone healthy and eligible to donate blood do so to help those who may need it.

While people in North Dakota are not at high risk to contract Zika, Feist said it is important for pregnant women or for couples who are planning to become pregnant to talk to their doctor about risk if they plan to travel. The Centers for Disease Control and Prevention maintain a list of places where Zika transmission is occurring, which should be consulted before travel, Feist said.

Opposition to Federal Rule on Two-Person Train Crews Places Profits Above Lives (The Legal Examiner)

Posted by Randy Appleton

August 30, 2016 4:27 AM

Automation and budget-cutting have led many freight and passenger railroads across the United States to cut crew sizes. As a logical result of such staff reductions, many of the largest trains moving along the nation's rails have only a single engineer in the locomotive—even those transporting oil and toxic chemicals. As recently as 20 years ago, a standard long-distance train crew consisted of an engineer, a fireman, a conductor and two

Regulators and rail worker unions have raised alarms about train crew reductions for many years. The Federal Railroad Administration (FRA) responded in 2015 by drafting a rule mandating minimum crew sizes of two people for Class I railroads, a group that includes Amtrak, BNSF, CSX and Norfolk Southern. The rule was published for comment this past winter, and the FRA held a hearing on its provision in July 2016.

FRA experts and representatives of rail employees, such as the Brotherhood of Locomotive Engineers and Trainmen, argued for larger train crews. They cited incidents like a conductor taking over for an incapacitated engineer aboard an out of control engine in North Dakota. The conductor's actions prevented a major derailment and likely explosion.

Arguing against the two-crew person minimum, rail companies said, against actual evidence, that "no evidence" existed to prove that adding crew to one-person trains could prevent accidents, injuries, deaths and property damage. The corporations also claimed that putting more than one person on a train would impose unsupportable costs on their operations.

FRA analysts countered the cost complaint by noting that putting one more person in a locomotive would require a maximum expenditure of $27.7 million over 10 years. That is far below the estimated value of the workers' lives expected to be saved and a tiny fraction of revenues for companies that regularly report annual earnings of several billion.

Having represented railroad employees injured in crashes and derailments for three decades, I know that placing more than one person in a locomotive adds an invaluable safety factor. Even with the (too slow) deployment of braking technology like positive train control, the role of a trained human in preventing tragedies cannot be overemphasized. Should an equipment failure occur or should an engineer suffer an unexpected injury or illness, having a conductor or other crew member present can make the difference between a disaster and a near-miss.

UTAH

Crews hemming in Box Canyon Fire, other blazes being monitored (Salt Lake Tribune)

By BOB MIMS | The Salt Lake Tribune
First Published Aug 29 2016 01:21PM • Last Updated Aug 29 2016 10:30 pm

Aided by fire retardant- and water-laden aircraft, about 50 firefighters worked Monday to keep the 4,000-acre Box Canyon Fire from spreading outside its remote, steep and rugged perimeter in Summit County.

The human-caused, four-week-old blaze continued to consume conifer, aspen and fallen dead timber about 12 miles east of Oakley, and it began Monday at 20 percent containment. Crews were focused on preventing any further spread downslope into Smith and Morehouse Canyon, or toward the Ledgefork Campground, Fire Incident Commander Nick Hillman reported.

No structures were threatened and no injuries had been reported, but the campground, the Smith and Morehouse Reservoir boat ramp and the Mud Lake Flats area, along with some trails in those districts, were closed for public safety reasons.

The Peterson Hollow Fire, now mostly burning toward the Idaho side of the state line, had topped 1,200 acres and was 22 percent contained as of Monday, said Fire Information Officer Sierra Hellstrom.

In all, 311 firefighters battled that blaze of undetermined origin. Crews were concentrating on keeping the flames within the unpopulated and rough terrain where it began Aug. 21, burning mostly timber and grass about 6 miles northwest of Garden City, Utah.

"Despite some tree torching, the Peterson Hollow Fire [has] made no significant runs," Hellstrom reported.

Meanwhile, central Utah's Briggs Fire was being monitored by about 10 firefighters, but otherwise being allowed to burn in the Beaver District of the Fishlake National Forest. In spots, back fires were set to deprive the blaze of uncontrolled fuels.

"Over the last 14 days a lot of progress has been made in firing operations, improving contingency lines and protecting values at risk," said Fire Information Officer Daniel Claessen, adding that it likely will take the onset of winter and snowfall to finally snuff the last of the flames.

The lightning-sparked fire had burned 3,418 acres along the south fork of North Creek since it was first reported on Aug. 9, about 10 miles northeast of Beaver.

Several other, smaller wildfires also were being allowed to burn throughout the state where potential for structural damage was nil, and the benefits to the health of forest lands involved were deemed positive in the long term.

Wildfire crew members killed in crash on way to fight Utah fire (St George News)

Written by Kimberly Scott

ST. GEORGE — A group of firefighters from Michigan on their way to the Box Canyon wildfire in Utah were involved in a crash on Interstate 35W in Anoka County, Minnesota, which left two firefighters dead and multiple others seriously injured.

The driver of the truck was subsequently charged with two counts of criminal vehicular homicide.

At approximately 3 p.m. Saturday, a truck carrying nine members of a wildland firefighting crew left the roadway for an unknown reason, struck the median cable barriers and rolled, according to a statement issued by Minnesota State Patrol.

The wildland fire crew was from the Beartown Firefighters, which is based in Baraga on Michigan's Upper Peninsula and is managed by the Keweenaw Bay Indian Community and the federal Bureau of Indian Affairs.

State Patrol officials identified the driver of the truck as 28-year-old Michael Johnson.

Eight of the passengers were identified as 23-year-old James Shelifoe; 25-year-old Alan Swartz; 26-year-old Dave Varline; 33-year-old Ross Jaukkuri; 34-year-old Gavin Loonsfoot and Joseph Jossens, all of Michigan; 29-year-old Shashaywin Sandman, of Minnesota; and 26-year-old Tyler Tolonen, of Wisconsin.

Shelifoe and Swartz were pronounced dead at the scene, according to the State Patrol.

The Keweenaw Bay Indian Community released a statement about the crash on its Facebook page Saturday night: "Our hearts are broken and our prayers are with the family members and those injured."

In a separate statement Sunday, the tribal government said that the injured firefighters were expected to recover, but released no details about their conditions.

Eleven other firefighters were also en route to the Box Canyon Fire in Utah when the fatal crash occurred

Eleven other firefighters were also en route to the Box Canyon Fire in Utah when the fatal crash occurred, according to the statement. The wildland fire crews were reportedly traveling in a convoy of three but became separated from the truck that crashed.

"Those firefighters are understandably shaken and are getting much-needed support from local agencies," the statement said.

Officials investigating the crash said Johnson showed "signs of impairment and combative behavior" when officers arrived at the scene of the crash, according to charges filed Monday in Anoka County District Court documents and obtained by ABC News.

Johnson later told investigators he believed he had fallen asleep at the wheel

Johnson later told investigators he believed he had fallen asleep at the wheel and that he hadn't slept more than 45 minutes in more than 24 hours, according to a criminal complaint.

Johnson also allegedly admitted to using marijuana early Saturday and to using cocaine two days earlier. Toxicology results are pending.

As a result of the crash and subsequent investigation, Johnson was arrested and charged with two felony counts of criminal vehicular homicide.

The Box Canyon Fire in Summit County east of Park City had consumed 4,000 acres as of Monday.

Unstable weather systems brought heavy winds into the area, increasing the fire's activity, according to a press release from U.S. Forest Service.

Officials said Sunday that the Utah National Guard had been activated to assist in battling the wildfire.

Utah Guard's 97th Aviation Troop Command and 2nd Battalion 211th Aviation responded to the Box Canyon Fire with two UH-60 Black Hawk helicopters, according to a press release from the Utah National Guard.

The human-caused fire is reportedly 20 percent contained.

Persons arrested or charged are presumed innocent until found guilty in a court of law or as otherwise decided by a trier-of-fact.

WYOMING

Grand Teton National Park - Berry Fire Update - Aug. 29 (Teton Valley News)

Since its discovery, Grand Teton National Park has been actively managing the Berry Fire for ecological benefits. The fire originated in the northern portion of the park, near Berry and Owl Creeks on the west side of Jackson Lake. Extreme fire behavior as a result of high winds and low relative humidity on Monday, August 22 pushed the fire across Jackson Lake and into the Teton Wilderness on the Bridger-Teton National Forest. A Type 2 Great Basin Incident Management Team took command of the fire on August 24th.

Closures:

At this time, fire managers anticipate being able to reopen Highway 89/191/287 tomorrow, Tuesday, August 30. This is subject to change dependent on weather and fire conditions. Until then the highway does remain closed for safety between the South Gate of Yellowstone National Park and Leeks Marina.

While Grand Teton and Yellowstone National Parks and Bridger Teton National Forest all have area closures in effect, both National Parks are open to visitors. This includes Leeks Marina and most visitor destinations and services. Travel times to Yellowstone may be increased depending on planned routes. Check before you go. And please drive carefully, with lights on, due to both visibility concerns from smoke and increased vehicle numbers.

Current Situation:

The Berry Fire was much more active yesterday. Most of the growth occurred on the northeast corner of the fire - in the Teton Wilderness - and the southwest portion of the fire - along Jackson Lake. Firefighters

have completed preparatory actions around Flagg Ranch, as well as on historic cabins and lookouts to minimize impacts from the fire, in the event the fire should reach those locations.

Today's weather will again be warmer and drier with atmospheric instability, which can contribute to rapid fire growth. Temperatures will rise into the mid-80s, and the relative humidity may drop into single digits. Light winds will prevail over the fire area. Despite the shorter days, thermal belts are allowing the fire to burn actively throughout the night.

Western Wyoming is experiencing historical lows for fuel moistures. Currently, no significant moisture is in the extended forecast. The conditions are similar to 2012, when fires burned actively well into September. The Berry Fire will continue to burn in the coming weeks, accomplishing the goal of rejuvenating the ecosystem through the natural process of wildland fire.

Firefighters expect to finish their work along Highway 89/191/287 today. Unless fire behavior or weather conditions change today, the road will reopen to the general public tomorrow.

For more information:

Follow Grand Teton National Park and Bridger-Teton National Forest on social media: @GrandTetonNPS and @BridgerTetonNF on both Facebook and Twitter. Information on other fires in western Wyoming is available at www.TetonFires.com. And information on fires burning in eastern Idaho can be found at www.IdahoFireInfo.com, or by filtering Idaho incidents on InciWeb.

One Day In August (Teton Valley News)

Bruce Mason -- Teton Valley Weather

August 27, 2016. The Tie Canyon fire had been slow the last couple of days, but the wind was forecast to gust up from the west in the afternoon. As that afternoon wind increased, near Hoback in Wyoming there was an earthquake. True story with a happy ending. Our amazing firefighters from Great Basin Team 5 had put down barriers which successfully held the fire from progressing toward Victor. In addition, the earthquake was magnitude 4.8, a light quake. It was felt throughout Teton Valley but no damage was reported. It was a good day.

Saturday is also a good reason to stop and think what might have happened. Not to scare, but because playing the “what if” game in your mind can make you more ready to take action should a number of things go bad at once. When situations turn really dicey, it's usually not just one thing that's gone wrong, but a combination. What if Saturday had gone differently?

Suppose that the wind had picked up more than forecast and pushed the fire toward Victor. And suppose that at the same time, the earthquake had been much stronger and much closer to Teton Valley. Well planned and prepared evacuations would have begun just as the earthquake damaged the roads and bridges making evacuations as planned impossible. Families would be separated. Shelters would have been set up by the Red Cross in Driggs and Alta for the Victor evacuees, but how could they get there with, say, Yellow Bridge gone or Highway 33 buckled and impassable? Are alternate routes available? Do the drivers on the roads in front of you know them? Do you know them? Can those routes handle the traffic? Were they damaged, too? And

what about the fire; is it going to stop at the predesignated evacuation zone or go beyond, further clogging the blocked roads with frightened residents?

This past week was a great drill if it prompted us to make individual and family disaster plans. Where will your family meet up? Do you each have a go bag, jump bag, or 72 hour kit packed with the essentials you'll need away from home a while? Have you thought about what you would grab if you could only take an armload of items with you from your home? Can you easily get from point A to point B by more than one route? Does each family member know how to contact the one person, preferably outside of the valley, who will be your central information point?

Did you know that detailed suggestions for this kind of plan have been made by Teton County Emergency Management? It has been tailored to Teton Valley and the kinds of disasters we are most likely to face here. Part one of this guide can be found at:

These guides are meticulously detailed and will take more than a quick glance by everyone in the family for them to be effective. Make the time now, because as the guide says, when disaster strikes, the time to prepare has passed.

And one more thing this week showed, the value of the CodeRED emergency alert system. Should an emergency occur near you, with CodeRED you will be notified by phone, and if you choose, on your smart phone using the app. If you have a land line phone in Teton Valley, you are already enrolled and will get a call should something important come up. If you have a cell phone, you will have to go on line and register with CodeRED to receive notifications on it. You can do that at:

Either way, you will receive word of impending situations faster by phone than if you have to wait for an officer to knock on your door.

OTHER FEMA NEWS

Drugs Used To Fight Hepatitis, Worm Infections Might Stop Zika (NBC News)

By Maggie Fox

NBC News, August 29, 2016

A drug already on the market to treat worm infections and another being tested against liver diseases may also help treat Zika virus infections, researchers reported Monday.

The findings are a rare bit of good news about Zika, which has caused epidemics across Latin America and the Caribbean, and smaller outbreaks in Florida, the Pacific and southeast Asia.

Zika has caused smaller epidemics of birth defects, notably brain damage that can cause miscarriages or profound developmental injuries in babies. It can also cause a paralyzing condition called Guillain-Barré syndrome.

It’s spread by mosquitoes and by sex. As of now, there is no vaccine or treatment.

The team at the National Institutes of Health (NIH), Johns Hopkins University and Florida State University looked first in a library of existing drug compounds for products that might act to stop Zika from killing brain cells and perhaps stop it from replicating itself.

“It takes years, if not decades, to develop a new drug.”

"It takes years, if not decades, to develop a new drug," says Hongjun Song of Johns Hopkins, who worked on the project. "In this sort of global health emergency, we don't have that kind of time."

But libraries of existing compounds let researchers use a computer to look for drugs that work in specific ways.

"So instead of using new drugs, we chose to screen existing drugs," said Dr. Guo-li Ming, a neurology professor at Johns Hopkins University School of Medicine. "In this way, we hope to create a therapy much more quickly."

They were delighted to find a drug already on the market and considered safe to use in pregnant women. "Niclosamide is an FDA-approved drug (trade name Niclocide) that has been used in humans to treat worm infections for nearly 50 years, and it is well tolerated," the team wrote in their report, published in the journal Nature Medicine.

"It is known to inhibit several viruses in culture systems, including the Japanese encephalitis flavivirus."

Japanese encephalitis is a relative of Zika and also carried by mosquitoes.

Tests on human brain stem cells in lab dishes showed it could interfere with Zika's replication in those cells. "Niclosamide is a category B drug, which indicates that no risk to fetuses has been found in animal studies. It has low toxicity in mammals," they added. "Emricasan was well tolerated in human trials, and there were no significant adverse events."

Another drug, called emricasan, helped prevent Zika from killing those cells.

"Emricasan is currently being evaluated in phase 2 clinical trials for the reduction of hepatic injury and liver fibrosis caused by chronic hepatitis C infection," the team wrote.

"Emricasan was well tolerated in human trials, and there were no significant adverse events."

A third compound called PHA-690509 also helped stop Zika replicating and from killing nerve cells, they said.

While the drugs work well in lab dishes full of cells, "we don't know if they can work in humans in the same way," Song said.

Niclosamide works in the gut, but it's not clear if it's possible to get it into the brain, Song said.

The researchers think the drugs might work best as a cocktail, attacking the virus from several fronts — in much the same way as drug cocktails fight the human immunodeficiency virus (HIV) that causes AIDS.

"To address these questions, additional studies need to be done in animal models as well as humans to demonstrate their ability to treat Zika infection," Ming said in a statement. "So we could still be years away from finding a treatment that works."

The White House has asked for $1.9 billion in federal funding to help pay for studies like these and to keep them going after Zika is no longer making headlines. But Congress could not agree on a funding plan and took a seven-week break without appropriating any cash.

The NIH, the Centers for Disease Control and Prevention and other agencies have taken money from other programs to pay for urgent Zika research.

At the beginning of the Ebola epidemic in West Africa, researchers complained that they'd been working on drugs and vaccines for years but that inconsistent funding and a lack of interest from Congress and from drug companies made it impossible to make better progress. More than 11,000 people died in Sierra Leone, Liberia and Guinea before the Ebola epidemic wound down last year.

COLORADO

Homeowners looking at major losses after hail and flooding in Colorado Springs (KOAA TV, Colorado Springs)

By Bill Folsom

The people living in areas of Colorado Springs inundated by hail and water on Monday, spent Tuesday cleaning up and assessing damage. “Literally found ourselves homeless overnight,” said John Martin who lived in one of the damaged homes on Logan Avenue. Multiple residents on the street are facing so much damage their homes will be unlivable for some time.

Many homes end up with hail and water in their homes. The basements of several homes filled with hail as deep as three feet. Other rooms show water makes several feet up walls. Where water subsided it left behind a coating of mud.

Erma Medina rents out a home on Logan Avenue. It is one of the homes with hail filling the basement.

There has been flooding in the area before, but never like this. She carried FEMA flood insurance until about a year ago when she says several city storm water drains outside her property were upgraded. With this disaster she see the problem as hail, but she says her insurance company says it is flooding. Sitting on a retaining wall outside the house Medina points to the remaining kneed deep hail, "Look at that hail. You can see the hail in the basement. The windows were broken by hail and they say it was flood. I don't believe it was a flood, no. She will dispute the claim, but says insurance or no insurance help she will find a way to repair the damage.

MONTANA

Western fires take big toll on programs (Billings Gazette, reprinted in Bismarck Tribune)

The late August sun is a smoky red ball, reminding Montanans of the fires that have destroyed homes and curtailed business in the West this summer. It's so dry in parts of Montana, Wyoming, California and other Western states that big fires are likely to burn until autumn snow falls. If lightning storms and wind persist, the fires will be bigger and more numerous.

The destruction is costly, and so is the firefighting. One year ago, the U.S. Department of Agriculture reported on the rising cost of fire operations and how it affected the Forest Service's other work. The numbers indicate that the Forest Service ought to be called the "fire service" because that's how the agency spent most of its budget. The USDA summed up the problem of "the depletion of non-fire programs to pay for the ever-increasing costs of fire." This has resulted in:

- Less money for restoration work that would help prevent catastrophic fires.

- Less protection of watersheds and cultural resources.

- Reduced upkeep of programs and infrastructure that support thousands of recreation jobs and billions of dollars economic growth in rural communities.

- Reduced support for the range of multiple uses, benefits and ecosystem services.

- Less research and technical assistance.

Firefighting staff has increased from 5,700 in 1998 to more than 12,000 in 2015. Meanwhile, the non-firefighting forest workers have been reduced by 39 percent — from 18,000 employees in 1998 to fewer than 11,000 last year.

Every non-firefighting program has been slashed. Forest road-building has been reduced 46 percent. Deferred maintenance funding was cut 95 percent despite a backlog of more than $5.1 billion in dam repairs, roads, sewer and water system improvements.

Lack of funding for everything but fires has prevented the agency from doing things that would save money in the long term. Energy efficiency projects have been deferred. Funding hasn't been available for partnership programs that generate private matching funds.

The report concluded with the solution that Congress has been delaying for years: Change the way we pay for wildfire fighting. Treat wildfires as the natural disasters they are.

In June, Sen. Steve Daines, R-Mont., spoke on behalf of draft legislation called the Wildfire Budgeting, Response and Forest Management Act. The first thing it would do, according to a Daines news release, is "end the unsustainable practice of fire borrowing by enabling a transfer of limited funds to the Forest Service and the Department of Interior through a budget cap adjustment when all appropriated suppressions funding (100 percent of the 10-year average) has been exhausted."

Sen. Jon Tester, D-Mont., reaffirmed his support for the Wildfire Disaster Funding Act. Both he and Daines are co-sponsors of the act, which would "pay for catastrophic wildfires through separate

emergency funding, allowing the Forest Service to devote more resources to proactive forest management like trail maintenance and timber harvest."

If S.235, which both of our U.S. senators are co-sponsoring, had been enacted and funded last year, the Forest Service would have $1.4 billion more to fight wildfires this year. But it didn't pass, so the Forest Service will again have to rob all its other operations to pay for the fiery disasters this year.

Montana's senators are in a good position to promote this bipartisan solution. Among many proposals for forest management involving timber harvest, recreation and conservation, nothing else is going to work well if the budget continues to be diverted to wildfire.

Lawmakers must stop the "fire borrowing" before another wildfire season begins. We call on Daines and Tester to work together to unite other Western senators and pass wildfire disaster legislation this year.
— *Billings (Mont) Gazette*

Efforts underway to help while portion of Yellowstone River is closed for businesses (KRTV, Great Falls)

By Morgan McKay - MTN News

LIVINGSTON - Governor Steve Bullock scheduled a Rapid Response Training meeting Monday for those affected by the closure of the Yellowstone River.

Many people like Chase Chapman have been left wondering how they will get through a Montana winter, since the closure of the Yellowstone has forced them to close their business.

"I don't need retraining, I'm very good at what I do," said Chapman, who is a fly fishing guide and teacher in Livingston. "When all these Congressman want to go catch a big fish, I go through Yellowstone Angler and we catch some big fish."

"So I came to this meeting today with some hope of maybe there's some grants available for a small business person, because if they opened up the river again tomorrow, I've now sold all my inventory," said Beth O'Neill, owner of SUP Montana.

Earlier today, Governor Bullock signed an executive order proclaiming an invasive species emergency to exist in the State of Montana. This order allows for different organizations to offer relief.

"We heard your concerns and taking a multi agency approach to addressing the immediate needs of workers who rely on the Yellowstone River for their livelihoods," said Bullock.

Local and Park County government officials attended the meeting as well as representatives from agencies such as the Montana Chamber of Commerce and the Montana Department of Labor and Industry.

"We do everything from helping folks file their unemployment claims to assisting them to potentially go into training folks who may have been impacted by this or a similar event," said Zack Medina, with Job Services.

“This isn't a handout, this isn't an entitlement program,” said Paul Martin, Bureau Chief of Unemployment Insurance. “It's a week to week eligibility program, it's funded by employers through payroll taxes.”

While unemployment insurance was one favorable option, other resources available were loans or a different temporary job placement.

“The last thing you want to do is get into debt, but there are economic injury loans, we can go up to two million (dollars),” said John Donovan, Small Business Administration.

Those businesses affected by the closure of the Yellowstone are encouraged to contact the Institute for Tourism and Recreation at the University of Montana, to help aid them in studying the full economic impact of the closure.

“Montanans I think, what makes us special, is to live here you have to learn to do several things,” said Chapman.

According to latest information released by FWP today, out of 30 trout tested in the upper Yellowstone, only two brown trout tested positive for the parasitic infection.

Officials say there is only evidence of the parasite, but not the disease. FWP also is saying there have been no trout mortalities documented from the disease.

Cloud cover keeps Copper King, Roaring Lion fires quiet (Missoulian)

- KIM BRIGGEMAN kbriggeman@missoulian.com

THOMPSON FALLS – Tuesday turned out to be a good day to fight fires in western Montana, though crews were keeping a lookout for a cool front blowing in from Oregon.

“There’s been a cloud cover over the fire this afternoon that’s kind of kept it subdued during the day,” spokesman Mike Cole said from the Copper King fire east of Thompson Falls.

A red flag warning issued for the afternoon and evening suggested dry thunderstorms might mix with temperatures in the 90s and relative humidity in the low to mid-teens and cause problems at both the Copper King and the Roaring Lion southwest of Hamilton, which turns a month old on Wednesday.

“I’m not sure if they’re actually going to produce over our area,” Lisa Keibler, public information officer at the Roaring Lion, said at 5:30 p.m. “We’ve got a lot of cloud cover and maybe some smoke from Idaho, but right now it’s pretty calm out actually.”

Neither fire is close to being out. An infrared flight in the middle of the night Monday raised the acreage of the Copper King to just under 26,000, up 1,000 acres from an estimate the evening before. It’s Montana’s largest active fire in 2016.

“Our biggest concern and kind of the linchpin of this thing is Munson Creek,” Cole said. “If we can keep this fire out of Munson Creek, that’s going to allow us to get a handle on this. But the weather has to cooperate and we have a lot of ground to cover and a lot of steep ground to try to get buttoned up.”

Munson Creek runs in a southerly direction to Highway 200 and the Clark Fork River 11 miles east of Thompson Falls and 13 miles west of Plains. Cole said crews were out until 2 a.m. Tuesday to complete a burnout operation on the north side of the fire.

During the day helicopters and an occasional fixed-wing aircraft were dropping water and retardant at the top of Munson Creek trying to keep the fire out of the deep canyon to prevent a possible run up the east side.

“We’ve been doing some structure protection work around the residences on Buffalo Bill Road,” Cole said. “If the fire did come down Munson Creek, those would be the first residences threatened, so we want to get ahead of the game.”

Some 220,000 gallons of water and 22,000 gallons of retardant were dropped on the fire Monday, when the fire west of Munson Creek burned back into the main fire toward the Big Hole Lookout. That resulted in a large column that was visible from Plains.

Tuesday’s red flag concern was rooted in an unstable air mass rated 6 on the Haines Index. The Haines Index has been used since 1988 to indicate the potential for wildfire growth. The index can range between 2 and 6, with a 6 being the driest and most unstable conditions in the lower atmosphere.

A total of 840 people are working the Copper King, which has cost an estimated $16.5 million to quell since it broke out on July 31.

Closures and evacuations remain in place. Forty-five homes have been evacuated and another 130 are on pre-evacuation notice. Log hauling is being permitted through the closure area from 4 to 6 a.m. daily.

Air quality in the Thompson Falls area climbed once again into the "very unhealthy" range Tuesday morning, spiking midway toward the top category of "hazardous" at 10 a.m. before dropping two levels to “unhealthy for sensitive groups” by 5 p.m.

"Very unhealthy" air means active children and adults, and people with respiratory disease, such as asthma, should avoid prolonged outdoor exertion; everyone else, especially children, should limit prolonged outdoor exertion.

Roughly 80 percent of hunting district 122 near Thompson Falls was closed indefinitely on Monday by the U.S. Forest Service.

Estimated containment date for the Copper King fire remains the end of October.

In Hamilton at the Roaring Lion fire, air quality remained good all day. Fifty-four people are on the fire, which was caused by unknown sources on July 31. Most of Tuesday’s action consisted of monitoring and checking the 8,533-acre fire with aerial resources to keep it within Ward Bowl, north of Camas Creek and south of Sawtooth Creek. Patrols were active on the ground to suppress spot fires over the fire line.

The Roaring Lion is expected to be contained by the end of September.

NORTH DAKOTA

Dakota Pipeline Was Approved by Army Corps Over Objections of Three Federal Agencies (Inside Climate News)

Sioux tribe's concerns were echoed in official reports by the EPA and two other agencies, but Army Corps of Engineers brushed them aside.

By Phil McKenna

Aug 30, 2016

BISMARCK, N.D.—Senior officials at the U.S. Environmental Protection Agency and two other federal agencies raised serious environmental and safety objections to the North Dakota section of the controversial Dakota Access oil pipeline, the same objections being voiced in a large protest by the Standing Rock Sioux tribe that has so far succeeded in halting construction.

But those concerns were dismissed by the U.S. Army Corps of Engineers, which relied on an environmental assessment prepared by the pipeline's developer, Dakota Access LLC, when it approved the project in July, according to public documents.

The 1,134-mile pipeline would carry approximately 500,000 barrels of crude per day from North Dakota to Illinois along a route that did not originally pass near the Standing Rock reservation, the documents show. After the company rerouted the pipeline to cross the Missouri River just a half-mile upstream of the reservation, the tribe complained that the Army Corps did not consider threats to its water supply and cultural heritage.

The EPA, the Department of the Interior and the Advisory Council on Historic Preservation echoed those concerns in public comments on the Army Corps' draft environmental assessment. Citing risks to water supplies, inadequate emergency preparedness, potential impacts to the Standing Rock reservation and insufficient environmental justice analysis, the agencies urged the Army Corps to issue a revised draft of their environmental assessment.

"Crossings of the Missouri River have the potential to affect the primary source of drinking water for much of North Dakota, South Dakota, and Tribal nations," Philip Strobel, National Environmental Policy Act regional compliance director for the EPA, wrote in a March 11 letter to the Army Corps.

The current route of the pipeline is 10 miles upstream of Fort Yates, the tribal headquarters of the Standing Rock Sioux tribe and the county seat. The Standing Rock Sioux rely on the Missouri River for drinking water, irrigation, and fish.

The EPA shared its concerns and recommended that the Army Corps undertake a new draft environmental assessment and release it for public comment. In that process, the EPA asked the Army Corps to consider "other available routes or crossing locations that would have reduced potential to water resources, especially drinking water supplies," and to carry out a "more thorough" analysis of environmental justice concerns. The other agencies also asked for further assessments and consultation with the tribes.

The Army Corps instead published its final environmental assessment four months later, which constituted final approval of the project. In it, the Corps acknowledged the agencies' comments, but said "the anticipated environmental, economic, cultural, and social effects" of the project are "not injurious to the public interest."

The Army Corps, which has jurisdiction over domestic pipelines that cross major waterways, declined a request for comment, citing ongoing litigation. Energy Transfer, owner of Dakota Access LLC, did not respond to a request for comment. The company has previously said "we are constructing this pipeline in accordance with applicable laws, and the local, state and federal permits and approvals we have received."

Tribe Takes their Complaints Public

The tribe's growing protest has gathered in a camp near Cannon Ball, N.D., and has drawn support from Native Americans from around the country as well as environmental activists. An estimated 1,200 people are camping there and Sioux leaders say 90 tribes are represented among the protesters.

The protest blocked construction equipment two weeks ago and Energy Transfer halted construction on the section of pipeline closest to the Standing Rock reservation. A federal judge said last week he will rule by September 9 on whether to grant the Standing Rock Sioux a temporary injunction. That would bar construction on sections of the pipeline where the ground hasn't yet been disturbed until a suit calling for the Army Corps to redo its permitting process can be heard.

Demographics of the Standing Rock Sioux reservation
The Standing Rock reservation spans 3,600 square miles across North and South Dakota, where 41 percent of its 8,217 residents live below the poverty level, more than triple the national average, according to a 2012 economic development report prepared for the tribe. Nearly a quarter of its population is unemployed.

In its comments calling for a re-do, the EPA said the environmental justice analysis in the Army Corps' draft environmental assessment used county-by-county or state-by-state data when the preferred level of analysis is "census block groups or census tracts."

"A screening level analysis for EJ [environmental justice] indicates there are several census block groups with substantial minority and/or low income demographics that could be potentially impacted by the project," the EPA wrote. "In addition to analyzing potential EJ impacts, Executive Order 12898 on Environmental Justice (February 16, 1994) also requires public outreach to potentially affected EJ communities."

In its final environmental assessment, the Army Corps said its analysis "contains an Environmental Justice analysis that conforms with recognized practice."

The agency also said the pipeline does not cross tribal land. "In fact, tribal land was specifically avoided as a routing mitigation measure," it said. "The Project does not anticipate any impact to water supplies along its route, and to the extent a response action is required, federal regulation will be complied with."

Route Became a Moving Target

The original route for the proposed pipeline crossed the Missouri River further north, 10 miles upstream of Bismarck, the state capital. North Dakota Public Service Commission documents show the route upstream of Bismarck in a May 29, 2014 map by Energy Transfer.

The company later rejected this route, citing a number of factors, including more road and wetland crossings, a longer pipeline, and higher costs. Also listed as a concern was the close proximity to wellheads providing Bismarck's drinking water supply.

"They moved it down to Standing Rock, which is a very remote area, but people live at Standing Rock too. There is an environmental justice component here," said Jan Hasselman, an attorney with environmental advocacy organization EarthJustice, which filed the lawsuit on behalf of the Standing Rock Tribe against the Army Corps of Engineers.

In its public comments, the Department of the Interior, the government agency responsible for the administration and management of Native American lands, called for the Army Corps to conduct an

Environmental Impact Statement, a more comprehensive analysis of the potential impact of the proposed pipeline.

"We believe the Corps did not adequately justify or otherwise support its conclusion that there would be no significant impacts upon the surrounding environment and community," Lawrence Roberts, acting assistant secretary of Indian affairs at the Depart of the Interior, wrote in a letter to the Army Corps in March.

The Advisory Council on Historic Preservation (ACHP), a federal agency that promotes the preservation, enhancement, and productive use of the nation's historic resources, also expressed concern over the Army Corps' assessment.

Federal law requires federal agencies to take into account the effect a proposed project will have on historic property. The Army Corps' assessment, however lacked adequate consultation with the Standing Rock Sioux tribe and focused on a limited number of water crossings rather than on the pipeline's entire expanse, according to letters ACHP officials wrote to the Army Corps.

"Based on the inadequacies of the tribal consultation and the limited scope for identification of historic properties that may be affected, the ACHP questions the sufficiency of the Corps' identification effort, its determinations of eligibility, and assessments of effect," Reid Nelson, director of the office of federal agency programs for ACHP, wrote in a May 19 letter to the Army Corps.

In its final assessment, the Corps stated there is "no new significant information on environmental effects" as a result of comments from the EPA and others. "As such, neither a supplemental or revised EA [Environmental Assessment] for further public review nor additional NEPA [National Environmental Policy Act] compliance actions was required."

"We're talking about a broad overarching and fundamental failure which is the decision to look very narrowly at environmental impacts at a few specific locations rather than the pipeline as a whole," Hasselman said of the Army Corps' assessment.

Having their concerns dismissed by the Corps, the tribe turned next to the courts. Their lawsuit calls for a halt to construction and full consideration of the pipeline's impact on tribal lands and water.

To obtain a preliminary or "emergency" injunction, however, attorneys representing the Standing Rock tribe will have to demonstrate imminent harm to historic sites if construction proceeds.

"To the extent that people are concerned about harm from oil spills, that is still a ways off," Hasselman said. "We can't really seek emergency relief on that front. That is something that we will be seeking in the course of the lawsuit."

5 things to know about the Dakota Access Pipeline (KETV, Omaha)

Native American tribe sued the federal government over project

UPDATED 7:33 AM CDT Aug 31, 2016

(CNN) —In what looks to be a possible sequel to the Keystone XL Pipeline dispute, another fight has begun over a proposed US oil route.

The Standing Rock Sioux Tribe has sued the federal government, saying the Native American tribe was not properly consulted over the project to construct a 1,168-mile crude oil pipeline that extends over four states.

While proponents of the Dakota Access Pipeline tout its economic boost, opponents question its environmental impact.

The US Army Corps of Engineers approved the project, granting final permits in July, to the dismay of environmentalists and the Standing Rock Sioux Tribe.

1. What is the pipeline project?

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois. The pipeline is also known as the Bakken Oil Pipeline, named for the oil-rich area in North Dakota. An estimated 7.4 billion barrels of undiscovered oil is believed to be in the US portion of the Bakken Formation, according to the US Geological Survey.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

2. Why is the pipeline being constructed?

The project developer, Dakota Access, a subsidiary of Energy Transfer Crude Oil, says the pipeline would help the United States become less dependent on importing energy from unstable regions of the world. It says a pipeline is the safest, most cost-effective and environmentally responsible way to move crude oil, removing dependency on rails and trucks.

It also estimates the pipeline would bring an estimated $156 million in sales and income taxes to state and local governments as well as add 8,000 to 12,000 construction jobs.

The proposal comes as a glut of cheap oil has devastated North Dakota's economy. The state had enjoyed a major boom, but after hitting highs in 2014, it suffered a major economic downturn.

The project developers say the $3.7 billion project will "bring significant economic benefits to the region that it transverses."

3. Who is protesting?

The Standing Rock Sioux Tribe filed a complaint in federal court alleging that "the construction and operation of the pipeline ... threatens the Tribe's environmental and economic well-being, and would damage and destroy sites of great historic, religious, and cultural significance to the Tribe."

There are also concerns that digging the pipeline under the Missouri River would affect the tribe's drinking water supply. The tribe, represented by Earthjustice, a nonprofit environmental law firm, has asked for an injunction.

Based in Fort Yates, North Dakota, the Standing Rock Sioux Tribe is a federally recognized Indian tribe, a successor to the Great Sioux Nation. Other Native American tribes and nations have joined its efforts.

"We have laws that require federal agencies to consider environmental risks and protection of Indian historic and sacred sites," Dave Archambault II, the elected chairman of the Standing Rock Sioux Tribe, said in a statement.

"But the Army Corps has ignored all those laws and fast-tracked this massive project just to meet the pipeline's aggressive construction schedule."

Sen. John Hoeven of North Dakota disputes the tribe's chief complaint that the Army Corps did not properly consult it.

"If there is some way for the corps to work to meet the concerns of the tribe, they should certainly do that. But (there) has been a consultation process. If the tribe doesn't feel that that has been sufficient, again, they can protest as long as they do it peacefully and safely, but ultimately their recourse is to the courts," the Republican senator told CNN affiliate KFYR-TV in Bismarck, North Dakota.

About 30 environmental groups, including the Sierra Club and Greenpeace, signed a letter to President Barack Obama, slamming the Dakota Access Pipeline as "yet another example of an oil pipeline project being permitted without public engagement or sufficient environmental review."

They appealed to him to reject the project -- as he did with the Keystone XL pipeline.

Protests have been held in North Dakota and Washington.

Construction equipment involved in the pipeline project in Iowa was set ablaze in suspected arson fires, reports say.

4. Who's on which side?

Bernie Sanders spoke out against the pipeline in November 2015, but Democratic presidential nominee Hillary Clinton has not addressed the issue. CNN reached out to the Clinton campaign for comment on the issue and has not yet received a response.

"If candidate Clinton does nothing to address this issue yet continues into November promising Native Americans that she is our champion, then her words will be nothing but false promises -- just more bombast, more white lies to Indians," Simon Moya-Smith, a citizen of the Oglala Lakota Nation and culture editor at Indian Country Today, wrote recently in a CNN op-ed.

Celebrities such as Shailene Woodley, Susan Sarandon and Rosario Dawson have spoken out against the pipeline.

Leonardo DiCaprio tweeted that he was "inspired by the Standing Rock Sioux's efforts to halt the Dakota Access Pipeline."

5. What's next?

The tribe's actions may be the start of a lengthy, legal fight over the Dakota Access Pipeline. Meanwhile, construction work on the pipeline is ongoing.

US District Judge James Boasberg said he wants to absorb both sides of the argument before issuing a ruling, which is expected by September 9, KFYR reported.

Officials Rate 3 Weekend Tornadoes In Eastern North Dakota (AP)

Associated Press, August 30, 2016

GRAND FORKS, N.D. (AP) – A weekend tornado that caused damage in the Hillsboro area had wind speeds up to 140 mph, according to the National Weather Service.

The agency rated the Saturday evening tornado in Traill County an EF-3 on the enhanced Fujita scale. An EF2 or higher rating is considered significant.

The tornado was as wide as three football fields are long and was on the ground for 8 minutes, according to a weather service report. It smashed bins at Rahr Malting Co.'s Taft grain elevator complex and spilled tons of barley onto the ground, destroyed a garage and uprooted trees on one area farmstead. It heavily damaged a home and a metal building at another farmstead.

No one was hurt. The town of 1,600 people was lucky that the tornado missed the heart of the community, said Connor Ulness with the storm damage restoration company Aspen Exteriors.

"The tornado came in just north of the center of town," he told WDAY-TV.

Severe storms in eastern North Dakota on Saturday spawned two weaker tornadoes in neighboring Grand Forks County, according to the weather service. One with wind speeds estimated at 70 mph and rated an EF-0 touched down in an open field near Arvilla. An EF-1 tornado with wind speeds up to 110 mph uprooted trees and demolished a barn in the Pleasant View Township area.

No injuries were reported in either of those tornadoes.

SOUTH DAKOTA

County To Explore Grant Possibilities For Areas Affected By Crow Peak Fire (Black Hills Pioneer)

By Jaci Conrad

Black Hills Pioneer

August 30,2016

DEADWOOD — Disaster prevention due to devastation caused by the Crow Peak Fire is the impetus behind the Lawrence County Commission's recent decision to give the go-ahead to the Natural Resources Conservation Service (NRCS) to provide an initial assessment of the area.

"We might discover something very important that needs to be done," said Commission Chair Daryl Johnson.

The Emergency Watershed Protection program of the conservation service is designed to help prevent damage to life or property after a natural disasters, like the Crow Peak Fire. A cost-share program, the protection program pays 75 percent of the costs to install practices such as replacing culverts identified in the Burned Area Emergency Response (BAER) report completed after the fire. If it decides the assessment is worthy of pursuing, the county, upon entering a sponsorship of the emergency grant program, would be responsible for 25 percent of the costs.

Because the county would be responsible for the operation and maintenance of any culverts installed, for the life of the culvert, commissioners were hesitant to commit to the program, asking first for an initial assessment to be brought back and reviewed before a formal commitment is made.

"You understand, our apprehension comes from the fact that we still maintain snow-removal on two bridges because we were a FEMA (Federal Emergency Management Agency) sponsor of them at one time," Johnson said.

With a 60-day deadline following the fire, which was put out on July 4, an application letter must be submitted to the conservation service by Friday, starting the information gathering process, beginning with a damage survey report. This report will identify what problems are present, how to fix any concerns, and the cost of repairing the concerns. The application letter does not commit Lawrence County to a contract.

District Conservationist Justin Boerboom addressed the commission, explaining that the NRCS is federal agency with USDA funding and takes measures to help prevent catastrophe after a natural disaster through the Emergency Watershed Program.

"We need a local sponsor to apply for assistance," Boerboom said. "We've proposed the project. The next step is to go out and evaluate what the issues are, what to address, the costs, and come back with a proposal."

NRCS State Engineer Jay Cobb said that once they evaluate, the next determination is if they can mitigate issues to gain benefits greater than the actual cost of construction.

Threats that the protection program addresses are termed watershed impairments and include, for example: debris-clogged stream channels, undermined and unstable streambanks, jeopardized water control structures and public infrastructures, wind-borne debris removal, and damaged upland sites stripped of protective vegetation by fire or drought.

Public and private landowners are eligible for assistance but must be represented by a project sponsor, such as the county, if they decide to move forward with the program.

Boerboom also presented the critical values table from the BAER report, listing all the concerns on private land. Listed as a very high risk to human life and safety is the Crow Creek Road and the threat of flash flooding with debris flows, road washout, and damage. The BAER team identified Crow Creek as an drainage of Crow Peak that would see an increase of about 50 percent over normal flows since the vegetation on the western slopes were burned.

Listed as a high threat to human life and safety are homes along Crow Creek Road; specifically, two cabins and the threat of flash flooding and debris flows.

Listed as a very high threat to property are: two road crossings with 18-inch culverts on Crow Creek Road; Crumm Driveway Crossing's 24-inch culvert; and Nicholas Cabin driveway, which

crossing 24-inch culvert. The threat here is flash flooding with debris flows, debris blockage, possible failure of crossing structures, and road washout/damage.

Listed as a high threat to property are private road crossings along Higgins Gulch Road in the floodplain, with the threat of flash flooding with debris flows, road washout/damage; and culverts under driveways alongside Higgins Gulch Road.

The BAER team determined the Higgins Gulch drainage would see increased flows of about 10 percent following the fire.

There are other threats that have been identified and listed in the intermediate to low threat categories.

Yankton Co. Resident Dies From West Nile Virus (KDLT News, Pierre)

Aug 29, 2016

KDLT News- Pierre, S.D.

The South Dakota Department of Health today reported a Yankton Co. resident died of West Nile virus associated causes. It is the state's first WNV related death this season. The individual was in the 80 to 89 age group.

To date this season, South Dakota has reported 74 cases of human WNV; 12 percent have had the most serious neruoinvasive disease while 88 percent have had WNV fever. Twenty-five percent of cases have been hospitalized. There has also been a WNV-positive horse in Butte County.

"This unfortunate death is a reminder for us all that while the Zika virus is grabbing headlines, West Nile is the mosquito-borne virus of concern here in South Dakota," said Lon Kightlinger, state epidemiologist for the department. "We strongly encourage people to protect themselves and their families by using repellent and avoiding the outdoors when mosquitoes are most active."

Kightlinger said South Dakotans can reduce their risk with the following precautions:

- Apply mosquito repellents (DEET, picaridin, oil of lemon eucalyptus or IR3535) to clothes and exposed skin. Limit exposure by wearing pants and long sleeves in the evening.

- Limit time outdoors from dusk to midnight when Culex mosquitoes, the primary carrier of WNV in South Dakota, are most active.

- Get rid of standing water that gives mosquitoes a place to breed. Regularly change water in bird baths, outside pet dishes, and drain water from flower pots and garden containers.

- Support local mosquito control efforts.

UTAH

Next step for American Fork River: Measure the risks with an eye toward spring (KSL TV, Salt Lake City)

By Amy Joi O'Donoghue | Posted Aug 30th, 2016 @ 7:02pm

SALT LAKE CITY — State water quality officials will insist on an action plan to prevent further contamination of the American Fork River from lead-laden sediment that killed thousands of fish in a two-mile stretch.

That plan will be put together by the North Utah Water Conservancy District with an eye toward preventing sediment from being stirred up by rain or spring runoff, said Walt Baker, director of the Utah Division of Water Quality.

He said the division also expects to get an estimate from project engineers on the amount of sediment that washed into the river as a result of the Tibble Fork Dam's $7.3 million rehabilitation and expansion project.

"We have moved sediment from point A to point B over a six-mile expanse," Baker said. "There needs to be an assessment of how bad it is and what steps need to be taken to remediate it."

It's the latest plan following completion by project engineers of a diversion channel that placed a 200-foot pipeline to reroute flows into the nearly empty Tibble Fork basin to prevent another sediment flush while work continues on the dam.

Baker said a lot of factors will come into play to mitigate the impacts of the sludge, especially given that high flows from spring runoff.

"Mother Nature is going to come with spring runoff regardless of any planning we do," he said. "We need to know what needs to be done."

Dave Brown, the Utah state conservationist with the U.S. Department of Agriculture's Natural Resources Conservation Service, said an aerial drone flew over the site Monday to quantify the amount of material that washed into the river.

"There is a very clear mini-canyon that is exposed now," he said. "The engineer indicated they could use survey technology to calculate how much sediment was deposited."

Dam project

The NRCS is the federal agency on the Tibble Fork rehabilitation project, which rose as a priority after a 2004 assessment found that 1960s-era dam did not meet safety standards. Work began in June, with the NRCS advising downstream users that as the reservoir began draining around Aug. 19, people could expect to see elevated levels of sediment in the river.

Brown said continuing inflows into the basin released larger amounts of sediment than anticipated. The result was a two-mile section of the river just below the dam that lost all its fish populations due to suffocation.

The Utah Division of Wildlife Resources said historically, there are about 1,000 to 2,000 fish per mile in that section of the river.

While water samples taken by the state show metal concentrations within screening values for health, recreation and aquatic life downstream, the sediment showed high levels of lead that likely resulted from legacy mining operations in the Wasatch Mountains.

Several hundred abandoned mines dot the mountains, some experiencing acid mine drainage and an unknown number are within proximity of perennial stream flows.

Baker said his division has worked in partnership with the Utah Division of Oil, Gas and Mining, to craft a blueprint of where there may be water quality risks — a concern accentuated with the disastrous Gold King Mine spill of 2015.

In that incident, EPA-led contractors bungled efforts to open a mine portal and sent a 3-million gallon torrent of mustard-colored mine waste into the Animas River above Silverton, Colo. The breach contaminated water in Colorado, New Mexico, Utah and the Navajo Nation in an environmental catastrophe critics say was avoidable.

Baker said the Gold King mine disaster underscores the need for Utah officials to get a handle on potential problems, sooner rather than later.

"It ought to be enough of a concern that we do some investigation," he said. "My greatest concern is if there needs to be an action plan and if these are time bombs waiting to go off."

Abandoned mines

While state officials over abandoned mine reclamation have mapped the hundreds of mines and their owners — if available — with work done in the 1990s, Baker said it is not clear how many of them pose risks to waterways.

"If, in fact, they do have flows and there are responsible parties, we can issue a permit and get an idea of the water quality of the mines' drainage," he said. "We will be way ahead to know if we have a problem or not."

The mining division closes up abandoned mines if there is a public safety risk, and Baker's division can enforce the Clean Water Act if water is at risk, but there is no state regulatory oversight absent those factors.

"We really don't know the extent," said Steve Fluke, administrator over the state's abandoned mine reclamation program. "We are trying to figure out how many are discharging and may be an environmental issue in light of Gold King."

While there is funding in place to deal with the cleanup of abandoned coal mines, no funding exists for other mines.

"There is no such law for cleaning up hard rock mine sites," Fluke said.

Mark Allen of Protect and Preserve American Fork Canyon sees the potential for another Gold King Mine spill in the Wasatch Mountains because he said no one is properly addressing the risks.

"The Wasatch Mountains have a bunch of ticking time bombs and no one wants to talk about them," he said.

Allen said the U.S. Environmental Protection Agency should step in and declare the Tibble Fork sediment release into American Fork River a Superfund site.

EPA had a response team in Utah County last week, but the federal agency has not disclosed what its employees determined about the Tibble Fork Dam release.

"We will continue to coordinate with Utah and federal agencies to evaluate data, information, and potential next steps related to the sediment release," said EPA spokesman Rich Mylott.

"We’re certainly aware of concerns related to historic mining and metals impacts in the American Fork watershed and have worked with state and local partners on previous assessment and cleanup projects in the basin."

Allen is leading a tour to legacy mine sites mid-month that Baker and Fluke said they plan to attend.

"I have been barking pretty loud," he said. "We're taking everybody up there who has some stewardship and asking them to figure out what to do."

Baker and several members of his staff are touring the New Yankee Mine on Snowbird property Wednesday to assess any downstream impacts.

The division is also looking at the resort's expansion into Mary Ellen Gulch, an approval granted earlier this year that requires water quality monitoring for two years before any construction on ski lifts or other facilities begins.

WYOMING

Route To Yellowstone Reopens, But Fire Danger Remains High (Wyoming Public Radio)

By CAROLINE BALLARD • 16 HOURS AGO

Northwest Wyoming continues to struggle with high fire danger as eleven wild fires currently burn in that part of the state.

Bill Swartley, a public information officer for the Yellowstone fire team, said Phase 2 fire restrictions will likely go into effect in Yellowstone National Park on Wednesday. That means any kind of open flame may be banned in the park.

Swartley said preventing any human caused fires is their top priority.

“These fires are lightning caused and for that reason are being managed for ecological benefits to the park,” said Swartley. “However, human caused fires are a total different type of ignition.” With temperatures reaching into the 80s and low relative humidity, weather conditions are prime for even more fire growth.

Some progress has been made, though. Highway 191/89/287 between Leek’s Marina and Yellowstone’s South Entrance was closed because of the Berry Fire but has now reopened. Highway pull outs along that stretch remain closed.

Swartley said there may be areas of light haze or smoke in the park that could make it hard to see.

“We’re just recommending people adjust their speed and turn on their headlights, increase their visibility as they pass through those areas of smoke,” said Swartley.

He added that people with respiratory sensitivity may want to check air quality at airnow.gov before heading into the park.

OTHER FEMA NEWS

NBC: Severe Weather. NBC Nightly News (8/30, lead story, 2:30, Guthrie, 16.61M) reported, “Make no mistake, we are in the fall throes of hurricane season now. And if you’re a storm watcher at the weather service looking at the US map tonight, there’s a lot to keep your eye on. Three big storms threatening the US coastline at this hour. Parts of Florida just placed under a hurricane watch, bracing for up to 10 inches of rain. A tropical storm warning for sections of North Carolina. And Hawaii gearing up for a possible one-two punch. The Big Island facing a hurricane warning at this hour. Gabe Gutierrez starts us off tonight in North Carolina storm zone.” NBC (**Gutierrez**) added, “Tonight, the view from the International Space Station is stunning: massive hurricanes swirling across the globe. Hurricane Madeleine in the Pacific, threatening Hawaii. It’s followed by Hurricane Lester. Churning in the Atlantic, Hurricane Gaston, not expected to affect the US but now the Carolina and Florida coasts are bracing for separate tropical systems.” **Unidentified speaker**: “The storm is an uncertainty, but we are preparing for it.” **Gutierrez**: “In Florida, tropical depression number nine is forecast to turn towards the Gulf Coast, bringing heavy rain and even isolated tornadoes over the next few days.” **Rick Scott**, Florida Governor: “Everybody has to be careful. We don’t want anybody to be injured. We don’t want any loss of life.” **Gutierrez**: “Another system, tropical depression number eight, is grazing North Carolina’s Outer Banks, where a tropical storm warning is in effect. The concern here, rip currents – fast-moving water that moves away from shore. Swimmers are pulled out to sea and panic while trying to swim against current, back to the beach.” **Drew Pearson**, NC Emergency Management: “Rip currents are dangerous. They’ve taken three lives here in the Outer Banks Just this past summer. There’s a high threat of them right now.” **Gutierrez**: “Young Payton Waller got caught up in one but managed to escape.” **Payton Waller**, swimmer: “It’s really rough and all these waves just crashing.” **Gutierrez**: “Other tourists on this tail end of summer are taking the offshore storm in stride.” **Unidentified speaker**: “I mean, one to three inches. Back home, this is what you call a thunderstorm.” **Gutierrez**: “Though neither of the storms closest to the eastern US are expected to strengthen into major hurricanes, it has suddenly become a busy season in the tropics.” **Rick Knabb**, National Hurricane Center: “Don’t focus so much on the strength or the category, because the water hazards might end up being the most dangerous.” **Gutierrez**: “As Florida prepares for flooding, here in North Carolina’s Outer Banks, things may seem calm. But, there is rough surf and dangerous rip currents up and down the eastern seaboard as far north as New England, possibly extending into the holiday weekend.”

CDC Will Run Out Of Money To Fight Zika In US Next Month (Washington Post)

By Lena Sun

Washington Post, August 30, 2016

The federal agency leading the public health response to the Zika virus in the United States will run out of funding to combat the mosquito-borne virus by late September, its director said Monday.

“The cupboard is bare,” said Tom Frieden, who heads the Centers for Disease Control and Prevention. “Basically, we’re out of money, and we need Congress to act to allow us to respond effectively.”

Of the $222 million that the CDC was allocated for domestic Zika response this year, about $200 million has been committed, Frieden said during a media roundtable in Washington. “The rest will be gone by the end of September.”

The timing further raises the threat for high-risk states along the Gulf Coast, particularly if Congress again fails to act on the Obama administration’s emergency funding request when lawmakers return to Washington next month.

“We’re in peak mosquito season” – which typically lasts through the end of October in the United States – and if transmission starts occurring more broadly, CDC “might not have the resources” to respond and send teams to support local and state officials, Frieden said.

The CDC has already issued unprecedented travel advisories for two areas in Florida where mosquitoes are actively spreading the virus: a one-square-mile section of Miami’s Wynwood neighborhood and a 1.5-square-mile zone in Miami Beach. Pregnant women are urged to stay out of both areas because of the danger Zika poses to a fetus.

Negotiations in Congress over a $1.9 billion Zika spending package fell apart in late June. Federal health officials have shifted money from elsewhere in the Department of Health and Human Services to fund the domestic response. That includes $38 million from fighting Ebola, $44 million from general public health emergency funds and, most recently, $81 million from programs at the National Institutes of Health and the Biomedical Advanced Research and Development Authority.

The money has gone to help states track the virus, provide assistance about birth defects caused by Zika and increase mosquito-control efforts. Within CDC itself, officials also have pulled resources from programs on immunization, disease infection and HIV outreach, including prevention treatment for people at risk of getting HIV, Frieden said.

Researchers continue to detail ever-graver consequences for babies born to mothers infected with Zika. A report from Brazil, published last week in the New England Journal of Medicine, described a newborn in Sao Paolo who had Zika virus in his blood for more than two months. While the baby had no obvious illness or visible birth defects at birth or when doctors examined him at about eight weeks, by six months he had developed severe Zika-related brain damage.

The first trimester of pregnancy is thought to be when Zika infection poses the greatest risk. In this case, however, the baby’s mother was infected late in her second trimester.

At the same time, the virus continues to spread to the rest of the world. The latest outbreak is in Singapore, a Southeast Asia travel hub, which typically has 500 full-time inspectors working to eliminate standing water where mosquitoes can breed. The fact that Zika is spreading there, with at least 56 cases now confirmed, shows how “it’s going to be really tough” for other places to control, he said.

During the coming weeks in the United States, Frieden expects there will be more cases of infants born with Zika-related neurological problems. As of mid-August, 17 babies infected in utero had been diagnosed with microcephaly, a condition defined by an abnormally small head and often serious brain damage.

In hard-hit Puerto Rico, the CDC estimates that 6,000 to 10,000 pregnant women will become infected during this mosquito season and that at least 100 to 270 infants will be born with microcephaly.

Without additional funding, Frieden said, the CDC won’t be able to undertake key projects to better understand and control the virus, including Zika’s longterm impact on infants and diagnostics to identify if a person has been previously infected.

In Puerto Rico, the agency also won’t be able to help the island establish its own vector control program. Without one, the island has not been able to conduct effective surveillance, mosquito control or public engagement, even though Puerto Rico is experiencing a Zika epidemic and has had a history of other vector-borne diseases.

Frieden said the few additional cases that have surfaced in other parts of South Florida are considered single cases that don’t represent a greater spread of the virus.

The travel advisories will be lifted after 45 days with no new cases from local transmission – the equivalent of three mosquito incubation periods. The Wynwood area is about halfway through that period, he said, but Miami Beach is still experiencing new cases.

Subject: RE: Standing Rock

There was recently an article posted on Facebook from anarchic news that gave this information about a shoot on sight order given in North Dakota.

Here is a summary and direct quote from the article accusing Homeland Security of giving the order:

At the end of the article in question from the Anarchicnews site, there is an unattributed quote forming the last paragraph that does say "Now though homeland security has taken over, legally, and the situation and the level of threat has been bumped up. This means they consider this a terrorist action and have the authority to shot on sight." The first paragraph and headline attribute the order to North Dakota and the governor. I think this particular Snopes article debunking that the governor issued any such order is a good think and valid.
I have searched diligently and not found any reference anywhere else to Homeland Security issuing such an order.

While Snopes debunked the article as it pertained to the Governor, they did not address the Homeland Security reference. This is now under discussion among members of my tribe and people are very disturbed about it.

Please clarify what Homeland Security;s role is regarding DAPL Pipeline and whether a shoot on sight order was issued. What is Homeland Security's policy on shooting perceived protestors. Is the DAPL protest classified as a terrorist action?

Thank you.

After reading more closely, it is an inquiry about Homeland Security's role with the protest and a potential shoot on site order.

I googled (b)(6) and found her on Facebook. She is retired, didn't say what she retired from.

I tried to get to the website she mentions below but it is an unsafe site per my iPhone (and I am respecting that since we just heard about cyber security).

If the question is about DHS, and it appeared in a news outlet, plus the national attention the protests have gotten, we may want to might to defer to HQ on.

The most current update:
Lots of national news coverage
Seems to be a significant tension between the tribe and the State.
The Tribe has Declared a State of Emergency to address the impacts from the pipeline.
ND ACLU has asked the State to to protect first amendment rights.
The protestors have set up a school for the kids at the camp.
There are still conflicting reports of violence vs. peaceful protests.

Hi Milo and Margeau –

I wanted to touch base on three things….

1) Are we still looking at tomorrow as the start for consultation for the Tribal Policy? And will we get to see the changes before it goes out?
2) There are significant protests going on just north of the Standing Rock Reservation (southwestern SD) regarding the XL Pipeline. Media is anticipating large busloads of people from other reservations arriving today. We are tracking from here. We haven't gotten any questions on it, but depending on how long it goes on, it could impact some of our travel plans and the availability of tribal EMs and Council as well as their interest in FEMA. The protests have all been peaceful and are expected to stay that way.

Hope you are both doing well!

Subject: RE: Action: HQ IHS inquiry re: Standing Rock

How is this?

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the Keystone XL Pipeline, this the Bakken Pipeline.
- The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).

- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Although the State EOC is in Level IV – Daily Operations, the situation is significant enough for the State EM director and the Adjutant General to cancel their planned participation in the TAG/NORTHCOM seminar August 17-18.

I have spoken with Greg Wilz and we are monitoring the situation. I do not anticipate any role for FEMA; this BLUF is for situational awareness only.

Subject: BLUF - Tribal protests in North Dakota

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

This BLUF is for situational awareness only.

The sustained protest of Dakota Access pipeline supported by the Standing Rock Sioux Tribe has now entered a third week, with conflicting reports on size, but current estimates range from 1500-2000 protesters. The protest site is located 1 mile off the reservation in neighboring Morton County, North Dakota. On Friday Aug. 19, North Dakota Governor Jack Dalrymple signed an emergency declaration, and Morton County has issued a local emergency declaration, which is expected to be extended. The state emergency declaration is primarily focused on law enforcement and traffic regulation and does not include activation of the National Guard.

Coverage of the protest also varies widely depending on the position of the covering media. After the initial arrests last week, more recent reports indicate there has been generally peaceful situation between protesters and law enforcement. North Dakota Highway 1806, which runs adjacent to the protest, is closed to through traffic, with detours established. Work at the site is currently halted as legal proceedings initiated by both the Standing Rock and the Dakota Access owners now work their way through the legal system.

On Sept. 9-11 the Annual United Tribes International Powwow is scheduled in Bismarck, approximately 60 miles from the protest site. The powwow normally sees about 5000 visitors, but there is speculation that that number could swell significantly in light of the protest, which is being supported by other tribes around the country.

I still do not anticipate any formal role for FEMA, but Region VIII will continue to monitor the situation via traditional and social media, and continue ongoing communication with the state.

Regards, Nancy

Construction stops, traffic restricted due to Dakota Access Pipeline protest

- CAROLINE GRUESKIN Bismarck Tribune
- 16 hrs ago
-

Morton County Sheriff Kyle Kirchmeier says all work on the Dakota Access Pipeline south of Mandan has been stopped indefinitely.

Construction is being stopped on the Dakota Access Pipeline near Cannonball Ranch and law enforcement is routing traffic away from the protest area as safety concerns mount.

“As of this moment, the Dakota Access Pipeline Project is being discontinued for the time being,” Morton County Sheriff Kyle Kirchmeier said Wednesday. “No work is going to be done there for an undetermined amount of time."

Kirchmeier said the protest has become unlawful as a result of criminal activity. He said his officers have been threatened and heard gunshots. The agency has gotten reports of pipe bombs, assaults on private security personnel, fireworks and vandalism.

In the interest of public safety, North Dakota Department of Transportation and Highway Patrol has established a traffic control point on Highway 1806 south of the North Dakota Veterans Cemetery. Only emergency vehicles and local traffic will be allowed through. Other vehicles will be detoured to Highway 6.

Kirchmeier said officers will safeguard workers and equipment as they leave the area. It is not clear whether the equipment will be removed.

Currently, there are no officers on the protest site. They are stationed at the highway barrier.

Kirchmeier said the state national guard has not been asked to intervene.

The sheriff's department will not be providing supplies such as Dumpsters and water to the protesters.

"I don't know if we need to provide them supplies when it has turned into an unlawful protest," Kirchmeier said. "We are just going to make sure that it remains safe."

The plan resulted from discussions with Energy Transfer Partners, the governor's office and tribal leadership, according to Kirchmeier.

About 1,500 to 2,000 people are camping in the area south of Mandan, Kirchmeier said. Twenty-eight people have been arrested in the past week.

Officers from around the state, including Mercer County, Cass County and Mandan, as well as Game and Fish, Highway Patrol and parole and probation, have assisted in policing the area.

During the closure, the Fort Rice boat ramp and campground, Eckroth Bottoms fishing area, Little Heart boat ramp, Little Heart Rifle Range and Graner Park will be closed to the public.

Regulators sound off on pipeline protests

- NICK SMITH Bismarck Tribune
  Nick Smith
  ○

North Dakota regulators on Wednesday defended their permit approval for the Dakota Access Pipeline, saying they hope tensions between protesters and law enforcement at a site near the Standing Rock Sioux reservation will cool off in the days ahead.

“I really regret that there’s this much conflict,” said Julie Fedorchak, chairwoman of the North Dakota Public Service Commission. “They have a right to disagree. They don’t have the right to threaten. They don’t have the right to obstruct.”

Hundreds of activists, as well as protesters from various tribes, have descended on the site in Morton County. Construction workers had begun ground work near where a section of the pipeline is intended to go. It will be bored under the Missouri River less than a mile from the tribe’s reservation boundary.

Since last week, at least 28 arrests have been made during the protests for disorderly conduct and criminal trespass.

Work has ceased indefinitely as of Wednesday.

Protesters' concerns include potential contamination of the Missouri River if the pipeline were to rupture, as well as the disturbance of cultural sites along the route.

After a rumor of human remains being found at the construction site spread, State Historical Society of North Dakota officials inspected the site on Friday but found no evidence of any cultural site or remains.

The Standing Rock tribe has filed a federal lawsuit against the U.S. Army Corps of Engineers over the permits issued for the project.

Dakota Access LLC, a partner of Dallas-based Energy Transfer Partners, countered on Monday by filing a lawsuit against Standing Rock Sioux Chairman Dave Archambault II and several others, citing threats to the safety of construction workers and law enforcement. Archambault was arrested Friday.

Archambault told reporters on Monday he was simply doing what others were doing during the protest when arrested. Several arrests were made when protesters pushed back against a police line when an attempt was made to block workers from leaving the site.

“The Dakota Access Pipeline project is harmful. It will not just be harmful to my people, but its intent and construction will harm the water of the Missouri River,” Archambault said Monday when urging others to join them.

Fedorchak said the 1,172-mile, 30-inch-wide pipeline project was reviewed over a 13-month period, with hearings in Mandan, Killdeer and Williston last year.

“This was very carefully reviewed by the PSC,” Fedorchak said.

Dakota Access began work on the nearly $3.8 billion project this spring following permit approval by the PSC and regulators in other states along the route. The pipeline is to begin in western North Dakota near Stanley and end near Patoka, Ill. It would transport as many as 450,000 barrels per day of Bakken crude when finished, with a future capacity of 570,000 barrels per day.

“They have a right to build this project,” said Fedorchak, adding that the company went through the proper permitting process and was granted approval.

Commissioner Brian Kalk agreed.

“These groups didn’t come to our hearings,” said Kalk, expressing disappointment that tribal leaders didn't appear at that time to voice their concerns.

Commissioner Randy Christmann said a large portion of North Dakota oil is transported by rail, and accidents can result from that mode of transport as well.

Sioux tribe leader wants political help to halt oil pipeline

- By JAMES MacPHERSON Associated Press
- Updated 17 hrs ago

BISMARCK, N.D. (AP) — A tribal leader Wednesday said he contacted the White House and met with North Dakota's senators in an effort to halt construction of a $3.8 billion, four-state oil pipeline that crosses the Missouri River near an American Indian reservation in southern North Dakota.

Standing Rock Sioux Tribal Chairman David Archambault II, in a teleconference with reporters, stressed that the he and the tribe are working to ensure peace among those protesting the Dakota Access pipeline.

"There is no place for threats, violence or criminal activity," Archambault said.

North Dakota transportation officials, meanwhile, closed a several-mile stretch of Highway 1806 on Wednesday because of the protest along the road.

The 1,172-mile pipeline planned by Dallas-based Energy Transfer Partners is passing through the Dakotas and Iowa on its way to Illinois. Construction crews with armed private security guards arrived last week just north of the Standing Rock Sioux reservation at the confluence of the Cannonball and Missouri rivers, where native Americans have been staging a protest for months at a "spirit camp."

Archambault and more than two dozen others have been arrested in the past week for interfering with construction of the project.

On Monday, developers of the project sued in federal court to stop protesters — including Archambault — from interfering with the project, alleging the safety of workers and law enforcement is at risk.

U.S. District Court Judge Daniel Hovland granted the developer's motion for a temporary restraining order Tuesday.

Archambault said he met Wednesday with North Dakota Sens. John Hoeven and Heidi Heitkamp to "express concerns" about the pipeline.

The tribe sued federal regulators late last month for approving the pipeline. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Archambault told reporters he also has urged President Barack Obama to step in. The president and First Lady Michelle Obama traveled to the Standing Rock Indian Reservation in 2014 to get a firsthand look at the impoverished living conditions on the reservation that straddles the North Dakota-South Dakota border.

Archambault said he asked nothing of the president then but is doing so now.

"I believe both he and Michelle Obama were touched," Archambault said. "So now if there's any way he can intervene and move this pipeline off our treaty lands, I'm asking him."

The White House did not immediately respond to emails seeking comment.

Subject: RE: Dakota Access Pipeline Protest

WOW!

IT is hard for me to believe the Chairman would have said what he did about violence. On the other hand, things are escalating. I had heard they were slowing down. Of course my sources are social media where tribal members are still talking about peaceful protests and prayer.

If they are looking to move FBI agents into the area, that will change everything, a lot like the National Guard would have changed things. The Powwow is coming up, they do have reason to be concerned.

My email differs from the information in this email. I do not want to contradict a federal partner, however, I will say the FBI is known for not being tribal friendly in Sioux country.

Also – as a side note they are not referring to the tribe or the Chairman. They are the Standing Rock Sioux, which is part of the grater Sioux Nation.

This is tricky. It also occurred to me if IHS is asking us for information we probably need to let Ron P. over at HHS know since he is my POC or HHS which over sees IHS.

I also looked up the person Milo referenced as looking for the information. Her name is Mary Smith and she is the Principal Deputy Director if Indian Health Services.

I have not talked to (b)(6) in some time, so unless mitigation has spoken to him I don't know about a conversation about the pipeline and PDM grants. I know that back when they were trying to work with the 404 funds that it was said by mitigation that cultural items where not approved mitigation projects, or at least the ones they were mentioning at the time, like using the grant to identify cultural sites.

As to the Regional EM call that we have been doing prior to OST deployment I was planning on doing one next month, but now with Matthew here and me potentially going to have to leave, I figured I would wait a couple weeks to before continuing with the planning.

Hi All –

(b)(6) (Standing Rock) is on the National Tribal Policy consultation webinar right now. He has asked Milo about using PDM to plan for the braking of the pipeline. He said that FEMA has said they can't help since it is off reservation, even though it was part of the Sioux Nation. He also asked about working with tribes on culturally sensitive areas but when they ask for PDM grants won't cover that so the wording in the PDM grant is wrong. This is of particular concern because of the use of water.

I am going to assume we talked to him at some point on this issue. He will likely be calling or emailing Milo at HQ.

He also asked about doing a National Tribal Emergency Association. Milo told him to look at what tribal associations are doing. ITEMA was used as an example, intertribal recovery foundation, National Congress of American Indians. He may be open to pushing something in our region.

Ricky, do you want to reach out to (b)(6) on this one?

M.

I have no idea where that idea came from, but I'm assuming someone from ND indicated as much to the police dept in Indiana loaning the officers.

Aaron,

I have not heard from Matt on this matter in 2 or so. Would you have time to sync up on this tomorrow morning. I am interested in understanding what exactly we are paying for and from what source.

Thanks,
Brian

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

COLORADO:

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Subject: RE: FEMA Region 8 clips for Wednesday 10-26

I am usually really good about reading the clips, but I missed this one. Sorry.

I have heard nothing else on my end about it, nothing on social media yesterday. Everything I am seeing is talking about things really starting to escalate between protesters and police. I was going to send you an update this morning.

I have no idea where that idea came from, but I'm assuming someone from ND indicated as much to the police dept in Indiana loaning the officers.

Aaron,

I have not heard from Matt on this matter in 2 or so. Would you have time to sync up on this tomorrow morning. I am interested in understanding what exactly we are paying for and from what source.

Thanks,
Brian

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

COLORADO:

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

“If you don’t know about something, you better take preventative measures to minimize the risks,” Espinal said. “So maybe the fact that we don’t have a lot of microcephaly means that we were doing our jobs” and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador’s government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

“It is very difficult to work out truly what is going on,” said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

“The fact is we don’t have any idea how many cases there were,” said Maierovitch, meaning it’s possible Brazil’s birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

I am usually really good about reading the clips, but I missed this one. Sorry.

I have heard nothing else on my end about it, nothing on social media yesterday. Everything I am seeing is talking about things really starting to escalate between protesters and police. I was going to send you an update this morning.

I have no idea where that idea came from, but I'm assuming someone from ND indicated as much to the police dept in Indiana loaning the officers.

Aaron,

I have not heard from Matt on this matter in 2 or so. Would you have time to sync up on this tomorrow morning. I am interested in understanding what exactly we are paying for and from what source.

Thanks,
Brian

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more

than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that

it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, “we are not seeing a big increase.”

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika’s potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Subject: RE: HQ IHS inquiry re: Standing Rock

Let me know what you think. This is essentially media monitoring, and HIS could pick that up, they also have people on the ground who should be able to provide them with some visibility. A bit concerning they are coming to us.

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA would engage in, we have been monitoring for situational awareness. The only direct contact we have had with the State has been a call from the State's director of Homeland Security, letting our Acting Regional Administrator know he would not be attending a conference because of the protest. All of our awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the XL Pipeline, this the Keystone Pipeline.
- The protest is about a mile north of the Reservation.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the intel could be incorrect. We have not reached out to the tribe or had additional conversations with the State, as this is not a FEMA related issue.

If there is anything else you need from me, please let me know.

Subject: HQ IHS inquiry re: Standing Rock

Hi Stacie -

Got a call from Milo this evening. Apparently, high level people at IHS are looking for Intel on standing rock protests. We have a reputation for knowing what is generally going on so they called Milo. Milo asked me to respond to the email below with what I may be hearing. I told him I would but I would site my sources and make sure that it is clear we have not been in contact with the tribe and this is not our issue.

Milo is concerned if we don't address it at this level, Fugate might get asked and it come down to Nancy.

I plan on writing my response first thing. I'll send it to you for review, unless you just want to be copied. I am going to try and get it out as early as possible.

Once that is out I'll write the tribal policy summary.

Thanks
M.

Good Morning Ron –

Hope this email finds you well.

I wanted you to be aware of a request I received from FEMA HQ last night. Mary Smith though Rocky Jones contacts our DC office, who then called me looking for information regarding the protests at Standing Rock. As my local contact for HHS and IHS, I wanted you to be aware. I am currently drafting my response and will make sure you get a copy.

FEMA is not involved in anyway. We have been monitoring via media and Facebook.

If you have any questions, let me know.

Subject: HHS Region 8 - New Event (ND - Dakota Access Pipeline Construction Protest)

North Dakota - Protesting Event (Monitoring)
Dakota Access Pipeline Construction
18 Aug 2016

BLUF: There are no current or anticipated requests for HHS/Federal ESF8 assistance

Current Situation: Region 8 RECs just received notification from the North Dakota Department of Health (NDDOH) that on August 16th, their Department Operations Centers (DOC) was activated (limited status) to monitor the escalating event of on-site protesting of the Dakota Access Pipeline construction (light, sweet crude oil), and to support the Standing Rock Sioux Tribe Incident Command (IC). Subsequently, the state Emergency Operations Center (EOC) was activated yesterday (limited status) by the North Dakota Department of Emergency Services (NDDES).

The construction site is on public land and the project is being managed by the Army Corps of Engineers. Even though the land is approximately four miles from the Standing Rock Reservation, tribal members claim that the land is rightfully theirs, a sacred burial ground, and close to their reservations water intake.

Protestors numbers are currently estimated at about 1,000 individuals. There is a nationwide call for additional Sioux tribe members and environmental activists to travel to North Dakota (ND) to support their efforts. In general, the protests have been peaceful to date, but there are reports of certain environmental activists calling for violent action.

NDDOH has supplied the Standing Rock Sioux Tribe IC with a command vehicle and trailer, a first aid station, an ambulance, and (2) 400 gallon water tanks. They will continue to monitor the event and provide support as needed.

Current/Future Actions: Region 8 RECs will continue to monitor and report on any significant events or developments.

Please contact us if you have any questions or concerns.

Federal judge to rule Sept. 9 on Dakota Access injunction

- JESSICA HOLDMAN Bismarck Tribune
  Jessica Holdman
- 1 hr ago

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

"A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million," the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.
Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

"Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court," Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe's historic preservation officer and many general tribal members.

"It highlighted how important this is to the tribe; this is not a small issue to them," Tsosie said.

From Billings too…

Crowd turns out in Billings for North Dakota pipeline protest (Billings Gazette)

By MIKE KORDENBROCK mkordenbrock@billingsgazette.com

Dozens of people in Billings turned out Wednesday to protest the construction of a $3.8 billion pipeline beginning in North Dakota, standing in solidarity with the hundreds who have been protesting the pipeline with the Standing Rock Sioux tribe.

At its height, around 40 people stood on the sidewalk near the Yellowstone County Courthouse lawn holding signs encouraging supporters to honk and chanting, "Water is sacred, water is life." That was double the people event organizer Bailey Brown had expected.

The Dakota Access Pipeline is proposed to transport Bakken crude to Illinois, passing under the Missouri River.

The importance of clean water and clean air were on the mind of Tajin Perez, a Billings resident who helped Brown with the event.

"Clean air and clean water should be a right to everybody, not just those who can afford it," Perez said. "That's why people are here. They've been drawn out to the same call to stand up for what's right, for what's fair for everyone, especially those who have been disadvantaged for so long in regards to contemporary issues between the U.S. government and the Native peoples of this country."

Gerald Sherman and his wife, Jael Kampfe, made the drive from Bearcreek with four coolers of meat for Brown to deliver along with other supplies to protesters when she heads to North Dakota on Friday in a rented van.

“I’m not against oil, but I’m against a pipeline crossing the river,” said Sherman, a banking industry retiree and Oglala Sioux tribal member. “These pipelines have a history of breaking. It happened in the Yellowstone.”

When he and his wife heard about the protest in Billings, they posted their plans to attend on Facebook, and three families from Red Lodge responded by donating meat for them to take.

Sherman and Kampfe joined Lucky’s Market, Natural Grocers and others who have provided camping supplies and food for Brown to transport.

“I’m really impressed,” Brown said of the turnout. “Especially the people honking.”

Collette Montclair, a member of the Standing Rock Sioux Tribe who has lived in Billings for two years, said she’s proud of the efforts of her family and friends who have been protesting in North Dakota and that she is sad that she can’t join them. Work has interfered with her plans to return home, Montclair said, and she expected she wouldn't make the journey until October.

Like Brown, she also noted how honking car horns raised her spirit.

“I love all the support, everybody going by honking their horns,” she said.

Joining Monclair was her 4-year-old daughter, Ayasha.

“We want her to be a part of everything,” Montclair said of her daughter, who was seated on the sidewalk with a sign.

As challenges to the pipeline and its protesters continue to play out, it’s unclear what Montclair will tell her daughter when she grows older, but she offered some thoughts about what she hopes she can say.

“That everybody stood up for what’s right, stood up for what’s ours, and that we were all a part of it.”

Morton County declares emergency with pipeline protest

LEANN ECKROTH Bismarck Tribune 12 hrs ago

With the protest against the Dakota Access Pipeline swelling to 2,000 people near Cannon Ball, Morton County officials may seek to access emergency funds to pay overtime to their deputies and other law enforcement agencies assisting Morton County in keeping the protest boundaries safe.

Protesters oppose the pipeline beneath the Missouri River because they fear it could contaminate their water supplies.

A special Morton County meeting will be held 4 p.m. Monday to address the emergency declaration, signed by Cody Schulz, chairman of the board, last week.

"This is to maintain public safety and to make sure the legal rights of everyone is enforced," Schulz said Sunday. "This has required a great deal of law enforcement manpower and time."

Schulz signed the declaration Aug. 15 and state law requires the remainder of the county board ratify the declaration within seven days to keep it binding.

County Commissioner Bruce Strinden said Sunday the declaration will allow the county to use its own emergency funds to pay deputies and other law enforcement for overtime tied to the protest.

"Without an emergency declaration, we cannot access those fund," said Strinden, who estimated the county may have banked about $125,000 in emergency funds. "We're getting help from neighboring counties and cities' law enforcement through mutual aid agreements, and appreciate it, but that help doesn't come free. We have to compensate them for food, lodging and of course pay. We're only a week into this."

Protesters said they are keeping the demonstration peaceful. Yet, the protest has challenged the county's enforcement capacity.

"This is a very large protest -- 2,000. So a protest of that size is of a concern to us," Strinden said. "People have a right to protest. The law enforcement will support legal activity in a protest unless it goes the other way."

"Right now, our primary goal is keeping everyone safe," he added, speaking of the need to close Highway 1806 during the protest. "There were vehicles parking on both sides of 1806. We don't want anyone injured or accidents."

Gov. Jack Dalrymple signed a declaration of emergency Friday. Strinden believes the state will pay for a large portion of North Dakota Highway Patrol troopers enforcing the highway because it lies in their jurisdiction, he said the county at this point will have to reimburse other law agencies for their assistance.

"At this point, we aren't seeking additional funds from the state," Schulz said. "The governor's declaration allows us to request extra resources, manpower or equipment from the state."

Governor issues emergency declaration in response to pipeline protests

CAROLINE GRUESKIN Bismarck Tribune

Updated Aug 19, 2016

North Dakota Gov. Jack Dalrymple issued an emergency declaration for southwest and south central North Dakota in response to protests against the Dakota Access Pipeline near Cannon Ball.

The declaration starts a process by which state agencies can get additional funding, said Greg Wilz, director of the Homeland Security Division of the state Department of Emergency Services.

Dalrymple said in the declaration that the state is committed to protecting the right to lawful protests, but recent events have created a "significant public safety concern."

The protests have grown substantially over the past week as about 1,500 people have gathered to demonstrate against the pipeline being drilled under the Missouri River. Large campsites have been established for the protesters. Twenty-nine people have been arrested during the demonstrations.

The Morton County Sheriff's Department has been the central law enforcement agency involved in monitoring the protests, but several state agencies have gotten involved.

North Dakota Highway Patrol has sent officers to the protest site, Wilz said. The health department has provided portable water trailers and a medical trailer at the protest camp. The transportation department has assisted with the road detour on Highway 1806 and put up barriers and signage.

Wilz said he will be looking at funding requests from the agencies, make an estimate and ask the emergency commission for an appropriation. The commission can authorize emergency services to get a loan from the Bank of North Dakota.

He estimated the additional resources could cost from $750,000 to $1 million, if the protests continue for the next few weeks.

The declaration also means an emergency operations center will be set up in the emergency services building, so that the agencies can coordinate their resources, Wilz said.

The money does not funnel directly into the local agencies, such as the Morton County Sheriff's Department. Rather, it reimburses the state agencies that provide personnel and material resources to local authorities.

Morton County declared its own state of emergency on Monday, for the purpose of tapping into its emergency fund and creating public awareness, said Cody Schulz, chairman of the county commission.

Schulz said the biggest expense for the county has been law enforcement, including overtime for the sheriff's deputies and assistance from other agencies, including the Mandan Police and the Cass and Mercer County Sheriffs.

The governor's emergency order does not include activation of the National Guard.

Protesters settle into camp life

CAROLINE GRUESKIN Bismarck Tribune

Aug 19, 2016

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere Thursday afternoon at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Wednesday, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Aug. 24, when a hearing will be held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement Friday no weapons were seen.

Many at the camp saw the previous days’ efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It’s been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Thursday, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast. Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,

Jerry

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney
6:00 PM, Oct 24, 2016
INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

“Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request,” said Erickson. “They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request.”

Indiana is acting as a “team player,” as it helps North Dakota with security during the pipeline dispute.

“We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc,” said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

“The fact is we don’t have any idea how many cases there were,” said Maierovitch, meaning it’s possible Brazil’s birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don’t have symptoms and don’t realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress’s failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

“We’ll have to hold our breath to see what happens in labor and delivery suites in a few months,” he said. “That’s the only way we’ll know whether we’ve dodged a bullet.”

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,
Jerry

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,
Jerry

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department,

Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,
Jerry

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney
6:00 PM, Oct 24, 2016
INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.
The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.
Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

“Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request,” said Erickson. “They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request.”

Indiana is acting as a “team player,” as it helps North Dakota with security during the pipeline dispute.

“We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc,” said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and

consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including

nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

“If you don’t know about something, you better take preventative measures to minimize the risks,” Espinal said. “So maybe the fact that we don’t have a lot of microcephaly means that we were doing our jobs” and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador’s government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Pipeline update:

Yesterday was a big day, Jessy Jackson arrived on site and talked between the protestors and law enforcement broke down.

- I am hearing a lot about treaty rights, this morning on NPR the Chairman of the Standing Rock Sioux talked about this land belonging to the tribes based on treaties (NPR and other media sources).
- A new encampment (the 1851 Treaty Camp) has been set up directly on the pipeline path, which is private property (KILI Radio).
- On Wed. Jessy Jackson arrived on site to speak out about the many human and civil rights violations being perpetrated by local police (Indian Country Today).
- Actor Mark Ruffalo was at Standing Rock yesterday showing his support and Leonardo DiCaprio announced today he is on his way (Indian Country Today).
- Everyone is still calling for peaceful protests (multiple media outlets).
- It is being reported there have been between 260 and 300 arrests since the protests began with most of them happening last Saturday and pepper spray being used by law enforcement (multiple media sources).
- FAA has issued temporary flight restrictions over the protest camps. Only response aircraft in support of law enforcement activity are authorized in the airspace (Bismarck Tribune).
- Negotiations broke down between protestors and law enforcement yesterday (Bismarck Tribune).
- This inforum link is to a video that shows clear frustration by law enforcement and that they do not want a confrontation. http://www.inforum.com/news/government/4145254-jesse-jackson-joins-pipeline-protest-effort-faa-issues-no-fly-restriction (InForum)

This is a particularly good story about law enforcement and what happened yesterday.

http://www.inforum.com/news/government/4146041-new-roadblock-emerges-highway-1806-confrontation-between-protesters-law

New roadblock emerges on Highway 1806 as confrontation between protesters, law enforcement looms

By Amy Dalrymple and Mike Nowatzki / Forum News Service Today at 10:22 a.m.

› ‹

ⓘ Dawn breaks over the Oceti Sakowin Camp Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor1 / 2

A roadblock manned by North Dakota National Guard troops blocks North Dakota Hwy. 1806 before sunrise Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor2 / 2

MORTON COUNTY, N.D. — One day after negotiations between Dakota Access Pipeline protesters and law enforcement broke down, the mood was tense but quiet Thursday, Oct. 27, as the sun rose above the resistance camps.

Above, in restricted airspace, a North Dakota Highway Patrol aircraft circled.

Cecily Fong, spokeswoman for the state's Department of Emergency Services, said medical staffing is in place should any injuries occur at the protest sites.

She said law enforcement will likely issue a warning to protesters congregating at a camp along State Highway 1806, where pipeline opponents have set up teepees and staged hay bales, logs and barbed wire to block the road, if necessary.

However, Fong said she didn't know the timing of any law enforcement action planned, and officers want protesters to leave the northern camp, which is on private property recently purchased by the pipeline's developer, Dallas-based Energy Transfer Partners. Protesters will be encouraged to return to the southern camp on U.S. Army Corps of Engineers land.

By Thursday morning, protesters set up an additional "halfway" roadblock on Highway 1806 — between their main barricade and the frontline camp where they've promised to hold their ground.

At the halfway roadblock, pipeline opponents staged tires, plywood, sheet metal and logs — all ready to move onto the highway should law enforcement approach. The additional roadblock provides more time for those at the main camp to leave or join the protesters at the frontline camp.

Sam Wounded Knee, from Crow Creek Nation in South Dakota, spent the night at the "halfway" roadblock.

He said a plane flew overhead through the night, and it appeared two people were in the surrounding hills to the west and using flashlights to signal back and forth with the plane.

Asked if he expects violence in a confrontation, "from the police, yeah, definitely," he said.

"All we're trying to do is protect our people," Wounded Knee said, adding that women and children were asked to leave the frontline camp Wednesday night. About 200 people are at the frontline camp.

With the new roadblock established by protesters, Highway 1806 has numerous staging areas, camps and road blocks stretched out over several miles, starting with an equipment staging area set up by law enforcement about a mile south of Fort Rice.

Traveling south on 1806, in succession, there is a law enforcement barricade, followed by the protesters' main barricade, halfway roadblock, frontline camp and main camp.

On Wednesday, negotiations between pipeline opponents and law enforcement officials broke down, setting up a possible clash as hundreds of protesters vowed to hold their ground at a the frontline camp directly in the path of the four-state oil pipeline.

A contingent of law enforcement and National Guard officials met with camp representatives on Highway 1806.

Cass County Sheriff Paul Laney of Fargo, who is helping Morton County coordinate the law enforcement response, made one last plea for protesters to remove their roadblock on 1806 and abandon the roughly 200-person "frontline" camp, where teepees and tents continued to pop up on land where the pipeline is planned

"We're here telling you this is private property and you have to leave," Laney told camp coordinator Mekasi Camp-Horinek on Wednesday. "We don't want a confrontation. Please stand your people down and go back to the main camp."

Mekasi pointed at the road – "our no surrender line," he said – and then back at the frontline camp standing in the way of the four-state, $3.8 billion oil pipeline – their "no retreat" line.

"That's your final word?" Laney asked.

"That's my final word," Camp-Horinek said, walking away.

"Good day, gentleman," Laney said, turning toward the staging area about five miles away near Fort Rice, where a mass of law enforcement and military forces has gathered.

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an "impasse."

Kirchmeier emphasized that "the last thing we want to do is do it forcefully."

"If we have the chance for open dialog, that's what we want to continue," he said.

Pipeline opponents say they've reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents' rights by blocking the highway.

Subject: RE: Short update on OST

Made a couple of small edits and one addition. Take a look.

This weekend could likely be a very contentious weekend up in the Bismarck, Mandan and Standing Rock areas.

- Tomorrow Federal court is expected to make a decision about whether to block construction of the pipeline. The Tribe has challenged the USACE decision to grant the permit to the pipeline company.
- This weekend in the United Tribes Technical Collage International Powwow in Bismarck. This is typically a huge event. Many of the tribes who have written support for or are part of the protest at Standing Rock are on the board of directors. This year's theme is *Empowerment Though Unity*.
- Yesterday and today the Tribal Leaders Summit is taking place, this always happens before the Powwow. There has been a lot of discussion at the meeting about the Pipeline and the protest.
- **The Governor of ND has activated (although not a full mobilization) the National Guard as backup for law enforcement in anticipation of the ruling. Guard members will assist in providing security at traffic checkpoints on the state highway leading to the protest site, which is being reopened to traffic this afternoon.**
- There are ongoing reports of violence from both sides.
- The chairman has issued a statement calling for peace.

Gov. Dalrymple calls on ND National Guard to assist with Dakota Access Pipeline protest security

http://www.kfyrtv.com/content/news/Gov-Dalrymple-calls-on-ND-National-Guard-to-assist-with-Dakota-Access-Pipeline-protest-security-392768331.html

BISMARCK, N.D.- Gov. Jack Dalrymple announced Thursday that the Morton County Sheriff's Department will receive help from the North Dakota National Guard as well as sheriff's officers throughout the state to help deal with the ongoing protest of the Dakota Access Pipeline.

Maj. Gen. Alan Dohrmann says this is not a full mobilization.

He says the National Guard personnel will serve in administrative, assistant role, deferring to the sheriff's department. He also says guardsmen will be stationed at traffic check points and will likely be armed the same as highway patrol.

National guardsmen are coming from Bismarck, Mayville and Fargo. They have law enforcement background but are not peace officers.

Morton County Sheriff Kyle Kirchmeir says his office has received reports of people intimidating residents in a variety of ways including playing "chicken" with drivers on County roads which has lead to increased patrols.

Standing Rock Chairman David Archambault II also released the following statement Thursday calling for peace in anticipation of the Sept. 9 court ruling:

Thousands of people, from members of the Standing Rock Sioux Tribe, tribes across the nation and First Nations in Canada, to non-Native supporters in the United States and around the world, have stood in solidarity against the harm and destruction caused by the Dakota Access Pipeline.

We have stood side by side in peaceful prayer.

The pipeline threatens our sacred lands and the health of 17 million people who rely upon the Missouri River for water. There is a lot at stake with the court decision tomorrow. We call upon all water protectors to greet any decision with peace and order. Even if the outcome of the court's ruling is not in our favor, we will continue to explore every lawful option and fight against the construction of the pipeline.

Any act of violence hurts our cause and is not welcome here. We invite all supporters to join us in prayer that, ultimately, the right decision—the moral decision—is made to protect our people, our sacred places, our land and our resources.

The ruling will decide whether construction can continue on the Dakota Access Pipeline.

North Dakota governor asks for National Guard assistance in pipeline protest

By Forum News Service Today at 12:52 p.m. http://www.inforum.com/news/north-dakota/4110814-north-dakota-governor-asks-national-guard-assistance-pipeline-protest

ⓘ Tom Stromme/Bismarck Tribune

MANDAN, N.D. -- Gov. Jack Dalrymple said he has asked the North Dakota National Guard for support in responding to law enforcement efforts at the Dakota Access Pipeline protest site south of Mandan.

The announcement came during a news conference Thursday, Sept. 8.

“Because of the increased and prolonged need for law enforcement resources, I have asked General (Al) Dohrman to make available some North Dakota National Guard personnel to support law enforcement and augment their public safety efforts,” Dalrymple said.

- Complete archive of Dakota Access Pipeline coverage

The governor said National Guard members will serve in administrative capacities and help provide security at traffic points.

“I have also placed additional Guardsmen on standby alert in the event they are needed to assist with response efforts,” Dalrymple said.

The move comes in advance of an expected ruling by Friday on the Standing Rock Sioux Tribe’s request for an emergency injunction to halt construction of the pipeline, which will cross the Missouri River less than a mile north of the Standing Rock reservation. The tribe fears the pipeline will leak and contaminate its water supply and sacred sites, and its lawsuit claims the corps failed to consider the historical and cultural significance of that area.

- Wetterling case gives another MN family hope son will be found

Previously, Jeff Zent, a spokesman for Dalrymple, said plans were under way for additional law enforcement officers in the Bismarck-Mandan area and enhanced patrols in Morton County, where hundreds of protesters are camped out near a pipeline construction site along Highway 1806 about 35 miles south of Mandan.

Thirty-seven people have been arrested on charges including preventing arrest, disorderly conduct and criminal trespass in connection with protests at pipeline construction sites in Morton County that began in mid-August.

Subject: RE: Standing Rock

Hi Milo and Rocky -

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);
* Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
* The concern is that the pipeline will contaminate water.
* The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
* As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
* This is not the Keystone XL Pipeline, this the Bakken Pipeline.
* The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):
* There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
* The Tribal Chairman has called for peaceful protest and prayer.
* The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
* The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
* The Tribe did put out a notice for donations.
* The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
* The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
* The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
* Dakota Access has filed suit against the protestors for preventing them from working.
* The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.
* September 9-11, the annual International United Tribes Powwow is scheduled to occur in Bismarck,

ND, which normally draws approximately 5,000 persons. Due to the protest they expect it could draw up to 15,000. The theme of this year's Powwow is Empowerment Though Unity.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

Thanks

Hi Nancy,

Here are the answers from Sean Johnson regarding the questions you had after this morning's stand up meeting:

- Has the National Guard been asked to assist with this incident?

The National Guard is not deployed in support of response operations

- What is NDDES activation level in regards to the Standing Rock protests?

We remain at Daily Ops – Level IV.

Hi Ron -

Per our conversation, I wanted to let you know that I sent the below email to the FEMA National Tribal Advisor and Rocky Jones with IHS - this is nothing official and just from our media monitoring.

Thanks

Megan

Subject: RE: Standing Rock

Hi Milo and Rocky -

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);
* Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
* The concern is that the pipeline will contaminate water.
* The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
* As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
* This is not the Keystone XL Pipeline, this the Bakken Pipeline.
* The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):
* There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
* The Tribal Chairman has called for peaceful protest and prayer.
* The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.

* The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
* The Tribe did put out a notice for donations.
* The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
* The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
* The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
* Dakota Access has filed suit against the protestors for preventing them from working.
* The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.
* September 9-11, the annual International United Tribes Powwow is scheduled to occur in Bismarck, ND, which normally draws approximately 5,000 persons. Due to the protest they expect it could draw up to 15,000. The theme of this year's Powwow is Empowerment Though Unity.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

Thanks

Megan Floyd

Megan,

Rocky Jones Emergency Management/Physical Security Specialist from the Indian Health Service has asked if we have heard anything regarding the protests at. Standing Rock.

If you have can you share with him?

Regards,

Milo

Also, some exciting news! Today is a working group meeting. You may want to let people know we are working on trying to secure the funding for a big meeting next year. The RA is supportive of the idea, but the cost is significant.

Tribal Policy is open for consultation – new regional approach is to do outreach and socializing the policy vs. listening session and encourage tribes to comment to HQ or Region after they process the information.

If anyone asks – we are tracking the protests even though this is not a FEMA issue. We are tracking simply for awareness and, if anyone it traveling up there, we should know about it. The conustion has halted on the pipeline for now, the Governor did declare a State of emergency last week, the National Guard is not being called in, the tribe is calling for peaceful protest and prayer, international support. 1,500 – 2,000 are the likely number of protests however the group is growing.

You can ask the questions – has anyone considered how their program will be impacted if we have more tribal declarations as we move forward with the changes to the Stafford Act. It would impact more than just PA. If not, people should think about it at we can talk again at another meeting.

Hi Ricky –

I know it took me forever, but I just read the paper you and Gary wrote. It is great and spot on!

I did find something you might want to change.

Not sure who, if anyone has acted as a third party editor, but you should at least be looking at usage of commas – there aren't many. Capitalization of Tribal and Nations.

Nice job. Hope I am not getting this to you to late.

M.

Daily Liaison Report
10/25/16

Liaison: Delia Husband
Liaison to: PA/Ops

Meetings/Events: None

Issues and trends:

- Nothing significant to report

Inquiries:

Inquiry: 10/25 PA Inquiry – Congressional Affairs

Can you provide some insight on when the state is planning to announce PA applicant briefings? Our congressional affairs team is looking for a schedule or at the very least some insight as to when the briefings will take place/and or be announced.

Response:

The Applicant briefs are conducted by the State and FEMA supports this effort. (b)(6) (b)(6) from NCEM is working on setting these up. He is working with the County Emergency Managers to build a schedule over the next few weeks.

Inquiry: 10/25 External Affairs – Planning & Products

Request for background information on Private Nonprofit (PNP) eligibility requirements

Response:

Through the Public Assistance program, private nonprofit (PNP) organizations may potentially be eligible to receive assistance. An eligible PNP that supplies critical services may apply directly to FEMA for funding of emergency and permanent work. These critical services include:

- Power: Facilities for generation, transmission, and distribution of electric power.
- Water: Facilities for the treatment, transmission and distribution of water by a water company supplying municipal water. In addition, water provided by an irrigation company for potable, fire protection, or electricity-generation purposes.
- Sewer and Wastewater: Facilities for collection, transmission, and treatment of wastewater.
- Communication: Facilities for transmission, switching, and distribution of telecommunications traffic.
- Emergency Medical Care: Facilities that provide direct patient care to include hospitals, clinics, outpatient services and nursing homes.
- Fire Protection/Emergency: Fire and rescue companies including buildings and vehicles essential to providing emergency services, and ambulance companies.
- Educational: Primary, secondary and higher education schools/institutes that provide education as determined under Commonwealth law.

Eligible PNP facilities that do not provide critical services are: custodial care, museums, zoos, community centers, libraries, homeless shelters, senior citizen centers, rehabilitation facilities, shelter workshops, and facilities providing health and safety services.

As such, these non-critical PNP facilities must first apply for a loan through the Small Business Administration for permanent work. If they are declined a loan or if the loan does not cover all eligible damages, they may apply to FEMA for consideration of public assistance funding after the applicant presents the official SBA denial letter to FEMA.

The distinction between critical and non-critical PNP's only applies to permanent work. Private nonprofit facilities that do not provide critical services still apply directly to FEMA for emergency work assistance.

A faith based organization set up as a non-profit that provides community services may be eligible for federal loans and/or grants to restore their facilities and equipment. To be eligible, churches must be open to the public and provide services such as: education; custodial and day care (including before/after-school and special-needs centers); residential facilities for the battered and disabled; assisted living and defined low-income housing; alcohol and drug treatment and rehabilitation; performing and community arts centers; food programs; homeless shelters; senior citizen and community centers or other community services.

[PNP facilities that provide both eligible and ineligible services are considered mixed-use facilities. Eligibility of mixed-use PNP facilities is dependent on the primary use of the facility, which is determined by the amount of physical space dedicated to eligible and ineligible services. “Primary use” is the use for which more than 50 percent of the physical space in the facility is dedicated. FEMA evaluates the entire structure when determining primary use; it does not separately address individual areas, such as floors, basements, or wings. Common space, such as bathrooms, hallways, lobbies, closets, stairways, and elevators, is not included when calculating mixed-use space.

If FEMA determines that 50 percent or more of physical space is dedicated to ineligible services, the entire facility is ineligible. If the facility is eligible, FEMA prorates funding based on the percentage of physical space dedicated to eligible services. The Applicant is responsible for the balance of costs to restore the facility and must restore the entire facility to receive funding for repairs to the eligible-use portions of the facility.]

Inquiry: 10/25 Congressional Inquiry

Sen. Tillis office inquired about funding for mosquito spraying, particularly in Lenoir County. Requested language/guidance on this action and if it can be funded under Category B.

Response:

Awaiting response from PA.

Inquiry: 10/21 Congressional Inquiry – AECA

Can you assist Congressional with getting SMEs for the Congressional update calls next week? The calls will be at 2:00 PM on Monday, Wednesday, and Friday, and we’re looking for program subject-matter experts to do brief (no more than five minutes) program overviews/education. Each call will last approx. 30-45 minutes max.

Response:

Awaiting response from PA.

Daily Liaison Report
10/21/2016

Liaison: Brian Hvinden
Liaison to: IA/Housing

Meetings/Events: 2:00 MHU Meeting with Industry Association

Issues and trends:

- Four additional counties added for assistance, bring total number of IA counties to 35.
- LER program extended to provide eligibility for up to 6 months. The program allows applicants to use IHP funds to pay for temporary loading at hotels. However these funds count against an applicant's assistance cap.
- FEMA and the state are working with the North Carolina Manufactured Housing industry to help identify potential solutions in providing housing to address needs
- With visit numbers dwindling, Disaster Recovery Centers in Nash and Wilson Counties scheduled to close Thursday evening.
- Tarrboro DRC staff identified local official providing some potentially conflicting information to residents, IGA following up to address concern.

Inquiries:

Inquiry: Congressional – What assistance is available for a person residing in a manufactured home owned by his parents that sustained damaged in the flood?

Response: Need more information, but such applicants may be able to receive assistance because they possess 'lifetime occupancy status. Will be getting a briefing from program tomorrow and additional information we will be provided in tomorrow's liaison report.

Had multiple Congressional IA casework inquiries not shared for PII reasons.

Tomorrow's schedule:

Briefing on "Lifetime Occupancy Status" – 10:00 am, IOF

Daily Liaison Report
10/25/16

Liaison: Lauren Washington
Liaison to: Mitigation/NFIP/EHP

Meetings/Events: Roy Wright, Deputy Associate Administrator for Mitigation, will be visiting the NFIP Flood Response Office (FRO) and will be participating in a ride-along and re-inspection visit.

Issues and trends:

- High water marks (HWM) continue to be conducted in the affected counties.
- Mitigation had a meeting today with the state to discuss implementation of the Hazard Mitigation Grant Program (HMGP) and expedited buyouts.
- EHP continues to assist IA and PA with PDAs.

Inquiries:
No inquiries at this time.

DSA Liaison Report
10/25/16

Liaison: Delores Campbell
Liaison to: DSA

Meetings/Events: None

Issues and trends:

- See Trends below reported by the DSA team

Inquiries:

- Nothing to report today

According to the DSA Field Operations for October 25, there are 19 crews conducting door-to-door outreach in 19 counties.

According to DSA Daily Summary Report, dated October 24, 2016:

- **Trending:**

  Survivors confused about appeal process, explained process and referred to Disaster Recovery Center #10 to update and fax paperwork (Cumberland County)

BLADEN COUNTY
Elizabeth Town

- **Trending/Rumors:**

  Survivors report that they are ineligible for FEMA assistance due to insufficient damages, DSA provided appeal process information

COLUMBUS COUNTY
Fair Bluff

- **Trend/Rumors**

  Survivors state they are unwilling to take temporary shelter too far from their damaged homes, due to fear of vandalism

Whiteville

- **Trends**

  Lack of hotels for TSA lodging

SAMPSON COUNTY
Autryville & Roseboro

- **Trends**

  Survivors reported no damage to residences, but had food loss due to electrical outage (5 days); referred to the local food bank and Disaster Supplemental Nutrition Assistance Program (DSNAP)

Daily Liaison Report
10/24/16

Liaison: Delia Husband
Liaison to: PA/DSA/Ops

Meetings/Events: None

Issues and trends:

- Nothing significant to report

Inquiries:

Inquiry: 10/24 LEP Inquiry – EA-LEP/ACN specialist

Does anyone on the DSA teams have the capability to review a translated document in Vietnamese?

Response:

DSA teams currently do not have a Vietnamese speaker.

Inquiry: 10/24 Congressional Inquiry – Rep. Tillis

Congressional inquiry received from Sen. Tillis office asking if there is any disaster assistance for public university research facilities. Specifically for North Carolina A &T, North Carolina State University and North Carolina Department of Agriculture research facilities that sustained damage.

Response:

Public universities are normally eligible applicants, as long as the facilities are in a designated county.

The appropriate staff representative should reach out to State emergency management officials for more information. [Attached fact sheet to enhance understanding of the program and eligibility.]

Inquiry: 10/21 Private Sector Inquiry

Private Sector specialist requests a PA SME to support outreach to Shaw University to speak about programmatic capabilities and PA programs that Shaw may be eligible for.

Response:

The PA program is implemented by the Recovery section of NCEMA. PA is supports sending a representative to conduct a briefing, but the request should go through the state. They should have the chance to brief their applicants/community and have the chance to defer to FEMA if they can’t meet the requirement.

Daily Liaison Report
10/21/2016

Liaison: Brian Hvinden
Liaison to: IA/Housing

Meetings/Events: 3:00 Housing Strategy Meeting

Issues and trends:

- Continued interest in DRC openings and locations
- Direct Housing Assistance Teams (DHAT) are surveying in 17 counties to determine needs beyond traditional financial assistance. If surveys in additional counties are needed, that request will come from the state.
- DSNAP program is approved when entire county meets eligibility requirements. There may be individual communities that meet requirements, but if the entire county does not, the community will not be eligible.
- Governor McCrory announced that FEMA and the state are looking at manufactured housing to address housing needs.

Inquiries:

Inquiry: JIC Inquiry: Social media reporting alternate hours for Bertie County DRC. What are correct hours?

Response:
All DRCs are working on the standard schedule of 9 to 7 Monday thru Friday and Noon to 5 Sundays.

Inquiry: JIC/EAO Inquiry: Need talking points on what is being done re: manufactured homes

Response:

- FEMA has a number of methods to assist survivors with housing. Residents have received funding assistance to make repairs to their homes or to find alternate rental housing while their damaged home is being worked on.
- FEMA has personnel working to identify rental resources throughout the impacted areas and continually provides referrals to individuals who cannot yet return to their homes.
- When other options have been exhausted FEMA can utilize manufactured housing to provide temporary housing for displaced residents.
- While the primary goal is to help survivors move back into their repaired homes or into existing rental resources, FEMA and the state are determining the scope of housing need and if a manufactured housing program will be needed.
- To support those planning efforts FEMA and the state are engaging the manufactured home industry in North Carolina to see how they might be able to support efforts to house residents impacted by Hurricane Matthew.

Inquiry: Congressional Inquiry: A citizen is interesting in applying for DSNAP, but his local office is closed due to the flooding. When can he sign up.

Response:
A full list of DSNAP signup location is available at http://www.northcarolinahealthnews.org/2016/10/21/usda-approves-emergency-food-benefits-for-matthew-victims/

Also had multiple Congressional IA casework inquiries not shared for PII reasons.

Tomorrow's schedule:

Manufactured housing meeting, 2:00 EOC

Daily Liaison Report
10/24/16

Liaison: Lauren Washington
Liaison to: Mitigation/NFIP/EHP

Meetings/Events: None

Issues and trends:

EHP continues to support PA in conducting PDA

All numbers reported below are estimated from claims polling data and are not verified.

State	Total No. of Claims	No. of Claims Closed with Payment	No. of CWOPs	Total No. of Closed Claims	% Closed	Advanced/Partial Payments	Amounts Paid on Closed Claims	Total Amounts Paid on All Claims	Average Closed Claim with Payment
North Carolina	4,935	45	82	127	2.57%	$5,142,265.00	$734,444.95	$5,817,709.95	$16,321.00

The following attachment is a copy of the NFIP staffing for the DRCs. There are not enough NFIP specialist to staff all of the DRCs. Once more staff becomes available all DRCs will be staffed with a specialist. DRCs 11 and 12 will not have NFIP specialist present.

Insurance 102216
4285 NC DRC Staff .xl

Inquiries:

No inquiries

DSA Liaison Report
10/24/16

Liaison: Delores Campbell
Liaison to: DSA

Meetings/Events: None

Issues and trends:

- Nothing to report

Inquiries:

- EA Congressional Affairs managers wanted to confirm whether DSA teams are going door-to-door

Response:

- Confirmed through the “DSA Field Operations for Monday 10/24,” 19 crews are conducting door-to-door outreach in 25 counties.

Other:
As of this morning, Per Alex Yesnik, no Vietnamese language person. DSA team is still searching.

Hand carried and waited for DSA branch directors review and approval of News Release.

I got another request last night from Milo on behalf of IHS requesting any updates we have.

There is nothing to share outside of what the media is saying. Social media has blown up. There are so many different versions and accounts about the protests, it would take a full time person to track it all.

At some point soon I need to call up to Standing Rock. The tribe needs to make a few decisions about EMI training before the end of the month. I am thinking I'll call before the 9th.

I'll send Milo and IHS some clips and let them know that is all we have. No direct information. I'll copy you on the email.

Tim wanted an update on standing rock at yesterday 9 am. I kept is short. I am assuming you will calling in and I do not need to attend? If anyone asks today I think the highlights are below and even then this is a lot.

Very different reports from the tribal side and local law enforcement sides.

Tribal Sources:
The tribe issued another statement last night calling for calling for peaceful protest and for people (anyone who cares about water) to exercise their first amendment right.

There is a sense from protestors that they are being misrepresented as violent.

There is also a social media effort to get more nation media coverage.

Local law enforcement press conference:
The primary route from Mandan to the reservation has been blocked off just south of Mandan and only local residents will be allowed south. They can not control people coming in from the south because that route is coming off the reservation.

He also talked about how there have been threats of violence and threats with pipe bombs and weapons.

Describes it as an unlawful protest.

He also reported pipeline construction has stopped for now because of safety. Governor's office has been talking to tribal leaders to keep things peaceful.

The County is estimating 1,500 to 2,000 protestors.

Local law enforcement and highway patrol are on site. National Guard has NOT been activated and has not been requested by local law enforcement.

Construction stops, traffic restricted due to Dakota Access Pipeline protest

- CAROLINE GRUESKIN Bismarck Tribune
- 16 hrs ago
-

Morton County Sheriff Kyle Kirchmeier says all work on the Dakota Access Pipeline south of Mandan has been stopped indefinitely.

Construction is being stopped on the Dakota Access Pipeline near Cannonball Ranch and law enforcement is routing traffic away from the protest area as safety concerns mount.

“As of this moment, the Dakota Access Pipeline Project is being discontinued for the time being,” Morton County Sheriff Kyle Kirchmeier said Wednesday. “No work is going to be done there for an undetermined amount of time."

Kirchmeier said the protest has become unlawful as a result of criminal activity. He said his officers have been threatened and heard gunshots. The agency has gotten reports of pipe bombs, assaults on private security personnel, fireworks and vandalism.

In the interest of public safety, North Dakota Department of Transportation and Highway Patrol has established a traffic control point on Highway 1806 south of the North Dakota Veterans Cemetery. Only emergency vehicles and local traffic will be allowed through. Other vehicles will be detoured to Highway 6.

Kirchmeier said officers will safeguard workers and equipment as they leave the area. It is not clear whether the equipment will be removed.

Currently, there are no officers on the protest site. They are stationed at the highway barrier.

Kirchmeier said the state national guard has not been asked to intervene.

The sheriff's department will not be providing supplies such as Dumpsters and water to the protesters.

"I don't know if we need to provide them supplies when it has turned into an unlawful protest," Kirchmeier said. "We are just going to make sure that it remains safe."

The plan resulted from discussions with Energy Transfer Partners, the governor's office and tribal leadership, according to Kirchmeier.

About 1,500 to 2,000 people are camping in the area south of Mandan, Kirchmeier said. Twenty-eight people have been arrested in the past week.

Officers from around the state, including Mercer County, Cass County and Mandan, as well as Game and Fish, Highway Patrol and parole and probation, have assisted in policing the area.

During the closure, the Fort Rice boat ramp and campground, Eckroth Bottoms fishing area, Little Heart boat ramp, Little Heart Rifle Range and Graner Park will be closed to the public.

Regulators sound off on pipeline protests

- NICK SMITH Bismarck Tribune
  Nick Smith
  -

North Dakota regulators on Wednesday defended their permit approval for the Dakota Access Pipeline, saying they hope tensions between protesters and law enforcement at a site near the Standing Rock Sioux reservation will cool off in the days ahead.

“I really regret that there’s this much conflict,” said Julie Fedorchak, chairwoman of the North Dakota Public Service Commission. “They have a right to disagree. They don’t have the right to threaten. They don’t have the right to obstruct.”

Hundreds of activists, as well as protesters from various tribes, have descended on the site in Morton County. Construction workers had begun ground work near where a section of the pipeline is intended to go. It will be bored under the Missouri River less than a mile from the tribe’s reservation boundary.

Since last week, at least 28 arrests have been made during the protests for disorderly conduct and criminal trespass.

Work has ceased indefinitely as of Wednesday.

Protesters' concerns include potential contamination of the Missouri River if the pipeline were to rupture, as well as the disturbance of cultural sites along the route.

After a rumor of human remains being found at the construction site spread, State Historical Society of North Dakota officials inspected the site on Friday but found no evidence of any cultural site or remains.

The Standing Rock tribe has filed a federal lawsuit against the U.S. Army Corps of Engineers over the permits issued for the project.

Dakota Access LLC, a partner of Dallas-based Energy Transfer Partners, countered on Monday by filing a lawsuit against Standing Rock Sioux Chairman Dave Archambault II and several others, citing threats to the safety of construction workers and law enforcement. Archambault was arrested Friday.

Archambault told reporters on Monday he was simply doing what others were doing during the protest when arrested. Several arrests were made when protesters pushed back against a police line when an attempt was made to block workers from leaving the site.

“The Dakota Access Pipeline project is harmful. It will not just be harmful to my people, but its intent and construction will harm the water of the Missouri River,” Archambault said Monday when urging others to join them.

Fedorchak said the 1,172-mile, 30-inch-wide pipeline project was reviewed over a 13-month period, with hearings in Mandan, Killdeer and Williston last year.

“This was very carefully reviewed by the PSC,” Fedorchak said.

Dakota Access began work on the nearly $3.8 billion project this spring following permit approval by the PSC and regulators in other states along the route. The pipeline is to begin in western North Dakota near Stanley and end near Patoka, Ill. It would transport as many as 450,000 barrels per day of Bakken crude when finished, with a future capacity of 570,000 barrels per day.

“They have a right to build this project,” said Fedorchak, adding that the company went through the proper permitting process and was granted approval.

Commissioner Brian Kalk agreed.

“These groups didn’t come to our hearings,” said Kalk, expressing disappointment that tribal leaders didn't appear at that time to voice their concerns.

Commissioner Randy Christmann said a large portion of North Dakota oil is transported by rail, and accidents can result from that mode of transport as well.

Sioux tribe leader wants political help to halt oil pipeline

- By JAMES MacPHERSON Associated Press
- Updated 17 hrs ago

BISMARCK, N.D. (AP) — A tribal leader Wednesday said he contacted the White House and met with North Dakota's senators in an effort to halt construction of a $3.8 billion, four-state oil pipeline that crosses the Missouri River near an American Indian reservation in southern North Dakota.

Standing Rock Sioux Tribal Chairman David Archambault II, in a teleconference with reporters, stressed that the he and the tribe are working to ensure peace among those protesting the Dakota Access pipeline.

"There is no place for threats, violence or criminal activity," Archambault said.

North Dakota transportation officials, meanwhile, closed a several-mile stretch of Highway 1806 on Wednesday because of the protest along the road.

The 1,172-mile pipeline planned by Dallas-based Energy Transfer Partners is passing through the Dakotas and Iowa on its way to Illinois. Construction crews with armed private security guards arrived last week just north of the Standing Rock Sioux reservation at the confluence of the Cannonball and Missouri rivers, where native Americans have been staging a protest for months at a "spirit camp."

Archambault and more than two dozen others have been arrested in the past week for interfering with construction of the project.

On Monday, developers of the project sued in federal court to stop protesters — including Archambault — from interfering with the project, alleging the safety of workers and law enforcement is at risk.

U.S. District Court Judge Daniel Hovland granted the developer's motion for a temporary restraining order Tuesday.

Archambault said he met Wednesday with North Dakota Sens. John Hoeven and Heidi Heitkamp to "express concerns" about the pipeline.

The tribe sued federal regulators late last month for approving the pipeline. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Archambault told reporters he also has urged President Barack Obama to step in. The president and First Lady Michelle Obama traveled to the Standing Rock Indian Reservation in 2014 to get a firsthand look at the impoverished living conditions on the reservation that straddles the North Dakota-South Dakota border.

Archambault said he asked nothing of the president then but is doing so now.

"I believe both he and Michelle Obama were touched," Archambault said. "So now if there's any way he can intervene and move this pipeline off our treaty lands, I'm asking him."

The White House did not immediately respond to emails seeking comment.

WOW!

IT is hard for me to believe the Chairman would have said what he did about violence. On the other hand, things are escalating. I had heard they were slowing down. Of course my sources are social media where tribal members are still talking about peaceful protests and prayer.

If they are looking to move FBI agents into the area, that will change everything, a lot like the National Guard would have changed things. The Powwow is coming up, they do have reason to be concerned.

My email differs from the information in this email. I do not want to contradict a federal partner, however, I will say the FBI is known for not being tribal friendly in Sioux country.

Also – as a side note they are not referring to the tribe or the Chairman. They are the Standing Rock Sioux, which is part of the grater Sioux Nation.

This is tricky. It also occurred to me if IHS is asking us for information we probably need to let Ron P. over at HHS know since he is my POC or HHS which over sees IHS.

I also looked up the person Milo referenced as looking for the information. Her name is Mary Smith and she is the Principal Deputy Director if Indian Health Services.

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

ANALYSIS

- *Colorado*: The Junkins Fire is now 60 percent contained… A pipeline project stemming from the 2013 floods won a technical award; FEMA, the Corps of Engineers and other agencies are noted for their work on the project.
- *Montana*: No FEMA-related stories.
- *North Dakota*: The Corps of Engineers is holding flood risk meetings this week in the Souris River Basin… An Indianapolis TV station reports that local law enforcement officers headed to the North Dakota pipeline protest will be paid for by FEMA.
- *South Dakota*: No FEMA-related stories.
- *Utah*: No FEMA-related stories.
- *Wyoming*: No FEMA-related stories.
- *Other FEMA-related stories*: The *Washington Post* has a story on why residents do not evacuate before a hurricane, suggesting officials should emphasize flooding and storm surge more than wind speed, and it has another story about the surprisingly few numbers of birth defects that have resulted so far from the Zika virus… A New Jersey paper

reports on a congressional bill to limit the profits insurance companies make from NFIP to 10 percent.

COLORADO:

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more

than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that

it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

“If you don’t know about something, you better take preventative measures to minimize the risks,” Espinal said. “So maybe the fact that we don’t have a lot of microcephaly means that we were doing our jobs” and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador’s government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

“It is very difficult to work out truly what is going on,” said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

“The fact is we don’t have any idea how many cases there were,” said Maierovitch, meaning it’s possible Brazil’s birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don’t have symptoms and don’t realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress’s failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

“We’ll have to hold our breath to see what happens in labor and delivery suites in a few months,” he said. “That’s the only way we’ll know whether we’ve dodged a bullet.”

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Stacie—

I realize after I got home on Friday that I never closed the loop with you about an agenda. See draft agenda below. Also, I forwarded you an invite reminder that can be forwarded to state PIOs, after you make any changes to the agenda.

I never did hear back from PIOs, so the state reports are suggestions that may help facilitate the call, but we probably don't want to include this information in the agenda that we distribute.

Tony, Joe and Cecily have confirmed. I think Micki will join but not sure about Kelly and Ryan. I'll check in with Kelly when I'm in Wyoming and will encourage her to call in. I will try to call from Wyoming, too.

Thanks,
Jerry

FEMA—State Public Information Officer Conference Call
Wednesday, August 24, 2016, 10:00-11:00 a.m. MOUNTAIN

Call-in: (b)(6) Pin: (b)(6)#

10:00 a.m. Welcome – Stacie Greff

State reports:

Colorado—Micki finishing Naval Post Graduate School. Project relates to media access.

Montana—Baker disaster. Wildfires.

North Dakota—DES role in pipeline protest.

South Dakota—OEM involvement in Sturgis rally.

Utah—September PIO conference in St. George.

Wyoming—Wildfires. Lusk one year later.

Region VIII reports:

- Region VIII IMAT in Louisiana. Daniel Green is the new IMAT EA Advisor.
- September is Preparedness Month. Be sure to let us know if states have plans. We want to support state efforts.
- NEMA-FEMA meeting in Chicago.
- OST wrap.
- Upcoming Tribal consultation.
- Status of ARA/RA position.

Subject: RE: HQ IHS inquiry re: Standing Rock

Let me know what you think. This is essentially media monitoring, and HIS could pick that up, they also have people on the ground who should be able to provide them with some visibility. A bit concerning they are coming to us.

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA would engage in, we have been monitoring for situational awareness. The only direct contact we have had with the State has been a call from the State's director of Homeland Security, letting our Acting Regional Administrator know he would not be attending a conference because of the protest. All of our awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);

- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the XL Pipeline, this the Keystone Pipeline.
- The protest is about a mile north of the Reservation.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the intel could be incorrect. We have not reached out to the tribe or had additional conversations with the State, as this is not a FEMA related issue.

If there is anything else you need from me, please let me know.

Subject: HQ IHS inquiry re: Standing Rock

Hi Stacie -

Got a call from Milo this evening. Apparently, high level people at IHS are looking for Intel on standing rock protests. We have a reputation for knowing what is generally going on so they called Milo. Milo asked me to respond to the email below with what I may be hearing. I told him I would but I would site my sources and make sure that it is clear we have not been in contact with the tribe and this is not our issue.

Milo is concerned if we don't address it at this level, Fugate might get asked and it come down to Nancy.

I plan on writing my response first thing. I'll send it to you for review, unless you just want to be copied. I am going to try and get it out as early as possible.

Once that is out I'll write the tribal policy summary.

Thanks
M.

Federal judge to rule Sept. 9 on Dakota Access injunction

- JESSICA HOLDMAN Bismarck Tribune
  Jessica Holdman
- 1 hr ago

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

"A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million," the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.
Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

"Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court," Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe's historic preservation officer and many general tribal members.

"It highlighted how important this is to the tribe; this is not a small issue to them," Tsosie said.

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,
Jerry

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney
6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff’s deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff’s Department, Marion County Sheriff’s Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff’s Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. “The federal government pays for it through FEMA,” said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

“Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request,” said Erickson. “They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request.”

Indiana is acting as a “team player,” as it helps North Dakota with security during the pipeline dispute.

“We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc,” said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and

consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including

nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Subject: RE: Standing Rock

Hi Milo and Rocky -

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);
? Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
? The concern is that the pipeline will contaminate water.
? The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
? As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.

? This is not the Keystone XL Pipeline, this the Bakken Pipeline.
? The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):
? There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
? The Tribal Chairman has called for peaceful protest and prayer.
? The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
? The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
? The Tribe did put out a notice for donations.
? The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
? The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
? The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
? Dakota Access has filed suit against the protestors for preventing them from working.
? The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.
? September 9-11, the annual International United Tribes Powwow is scheduled to occur in Bismarck, ND, which normally draws approximately 5,000 persons. Due to the protest they expect it could draw up to 15,000. The theme of this year?s Powwow is Empowerment Though Unity.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

Thanks

I got another request last night from Milo on behalf of IHS requesting any updates we have.

There is nothing to share outside of what the media is saying. Social media has blown up. There are so many different versions and accounts about the protests, it would take a full time person to track it all.

At some point soon I need to call up to Standing Rock. The tribe needs to make a few decisions about EMI training before the end of the month. I am thinking I'll call before the 9th.

I'll send Milo and IHS some clips and let them know that is all we have. No direct information. I'll copy you on the email.

M.

Recent News on Dakota Access Pipeline

Work stops at Dakota Access Pipeline site

LAUREN DONOVAN Bismarck Tribune

DAKOTA ACCESS PIPELINE – Work stopped Tuesday and possibly Wednesday at the site where hundreds of Standing Rock Sioux tribal members and supporters are protesting construction of the Dakota Access Pipeline near the reservation boundary.

The work stoppage gave law enforcement, tribal and state officials some time out to plan how to manage the protest, with numbers swelling by the hour with busloads of Sioux and others arriving to join the anti-pipeline movement and arrests occurring almost daily.

Workers were instructed to leave their equipment late Monday after youthful protesters walked onto the work site and surrounded the machinery. Morton County Sheriff Kyle Kirchmeier said the mix of people around the machinery caused him to stop work until an improved plan for safety could be developed.

Kirchmeier said he didn't know whether work would resume Wednesday (today), because some options were still in flux Tuesday evening. One option was the private landowner allowing his fence to be moved back into his property to give protesters more room to assemble off the highway.

Kirchmeier met with Standing Rock Sioux officials in the morning and with state officials at the governor's office Tuesday afternoon, before returning to the department headquarters to brief patrol on how and when work will continue.

"Basically, what we talked about at the meeting was how to de-escalate tensions between the pipeline workers and the protesters, and us, I guess. One option is to give them more land and more comfort, room for tents, water, a dumpster, that kind of thing," the sheriff said. Ideally, there would be ample room to move the hundreds of cars, pickups and enforcement vehicles off the roadway, too, he said.

Some 28 people have been arrested since last week, including tribal chairman Dave Archambault, and charged with disorderly conduct for trying to block access to the work site.

The tribal members are protesting the pipeline's crossing of the Missouri River near the reservation boundary for fear it will rupture and contaminate their water, water downstream and disrupt sacred historic sites.

The sheriff said a federal court judge, at the request of Dakota Access Pipeline, signed a restraining order against anyone arrested being at the pipeline location.

"We are pleased that the judge granted our request for a temporary restraining order, which will allow us to more safely carry out our construction activities at the site. We will continue to put the safety of our workers and those who live in the area as our top priority as we continue construction in all four states of this important energy infrastructure project," Granado Communications Group, a PR firm for Energy Transfer Partners, said in a statement.

In a situation of historical irony, after the work shutdown, law enforcement pulled back from the protest site on Highway 1806 to a communication command center set up at Fort Lincoln State Park. The park preserves the fort from which the cavalry and Lt. Col. George Armstrong Custer left to never return after a fatal battle against the Sioux. A replica of Custer's captured flag was flying among others representing some of the 25 to 30 estimated tribes that have arrived to support Standing Rock since the protest started last week.

Another reason to pull back toward Mandan was to get into range of reliable cell phone service. Many at the protest scene believe cell towers are being purposely jammed to prevent communication, but North Dakota Highway Patrol Cap. Eric Pederson said that there is no truth to the rumor.

With the growing numbers of protesters -- now at least 500-600 -- a second protest camp was established late Monday night on low land just south of the Cannonball River and tents, buses and teepees were scattered around a central kitchen and check-in tent. An original spirit camp was set up months ago in protest.

Cheyenne River Sioux Tribal Chairman Harold Frazier arrived with several busloads of his tribal members Tuesday afternoon and said it's the biggest such gathering of Native tribes he can recall, with representatives from tribes coast-to-coast and Canada.

"Things are going well, with the construction stopped. I think it should stay stopped and let the courts settle it," Frazier said. "I believe we will stop it."

Frazier said he and Archambault were cooperating to ensure there is adequate food and shelter for everyone arriving to support Standing Rock.

Dakota Access did not return calls and emails seeking comment on the work stoppage.

Back at the protest site closest to where the pipeline is being staged up for boring under the Missouri River, the scene was relatively quiet and peaceful throughout the day.

One of the Sioux' most holy men, Arvol Looking Horse, the 19th successive keeper of the sacred White Buffalo Calf pipe, led hundreds in prayer at the gated entrance to the pipeline route.

The prayers, burning sage and sounds of drumming were intended to restore a protest based on prayer and peaceful objection, amidst worries that not everyone can be controlled in such a large, fast-moving situation and as arrests continued to mount. Men, women and children sang the old language and turned as one to the four corners of the universe. Cameras were forbidden during the ceremony.

Tribal member and former councilman Tim Mentz said the prayers were at the request of Archambault. “The chairman asked to go back to prayer, to ask for peace and safety and that we can accomplish what we are here to do,” Mentz said. “It’s for one thing; the safety of everyone. We’re all praying for the same thing.”

After the prayers, the access gates were propped open and the protesters walked the construction route on private land down to the Missouri River below, a hot walk in nearly 85-degree temperatures. Many walked, some rode horse and others rode in the back of pickup trucks, intent of making contact with the water a half-mile away.

Dakota Access Pipeline Standoff: Mni Wiconi, Water is Life

Indian Country Today

Valerie Taliman, West Coast Editor

8/15/16

Police line up before protesters near the construction site of the Dakota Access oil pipeline.

The controversial Dakota Access Pipeline project is back in the news. Over the weekend, tribal activists faced off against lines of police in Hunkpapa Territory near Cannon Ball as construction crews prepared to break ground for the new pipeline, while Standing Rock Sioux governmental officials resolved to broaden their legal battle to stop the project.

On July 26, 2016 the Standing Rock Sioux Tribe was stunned to learn that the U.S. Army Corps of Engineers had given its approval for the pipeline to run within a half-mile of the reservation without proper consultation or consent. Also, the new 1,172 mile Dakota Access Pipeline will cross Lake Oahe (formed by Oahe Dam on the Missouri) and the Missouri River as well, and disturb burial grounds and sacred sites on the tribe's ancestral Treaty lands, according to SRST officials.

Texas-based Energy Transfer Partners will build, own and operate the proposed $3.78 billion Dakota Access Pipeline and plans to transport up to 570,000 barrels of crude oil fracked from the Bakken oil fields across four states to a market hub in Illinois. The pipeline—already facing widespread opposition by a coalition of farmers, ranchers and environmental groups—will cross 209 rivers, creeks and tributaries, according to Dakota Access, LLC.

Standing Rock Sioux leaders say the pipeline will threaten the Missouri River, the tribe's main source of drinking and irrigation water, and forever destroy burial grounds and sacred sites.

"We don't want this black snake within our Treaty boundaries," said Standing Rock Sioux Tribal Chairman Dave Archambault II. "We need to stop this pipeline that threatens our water. We have said repeatedly we don't want it here. We want the Army Corps to honor the same rights and protections that were afforded to others, rights we were never afforded when it comes to our territories. We demand the pipeline be stopped and kept off our Treaty boundaries."

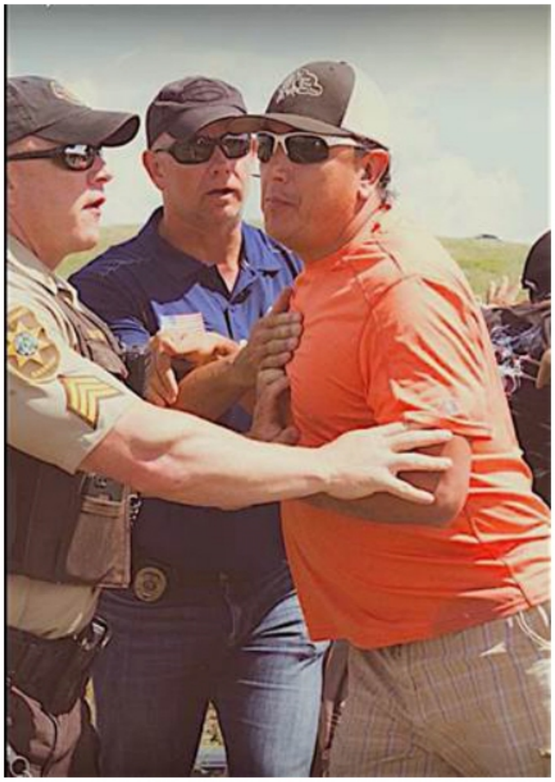
On July 27, SRST filed litigation in federal court in the District of Columbia to challenge the actions of the Corps regarding the Dakota Access pipeline. The suit seeks to enforce the tribal nation's federally protected rights and interests. The nation is seeking a preliminary injunction to undo the Corps' approval of the pipeline at a hearing on August 24. The Cheyenne River Sioux Tribe and several other native nations have asked to join the lawsuit.

On August 8, Dakota Access called the Standing Rock Sioux Tribe to give 48-hour notice that construction would begin on August 10 for an access corridor and staging area where pipes and other equipment will be stored for construction.

As news of the planned construction spread via social media among tribal citizens and activists, a grass-roots gathering assembled at what is now being referred to as the Sacred Stone Camp where people are holding the line to stop construction. After Dakota Access workers began clearing an area for preliminary pipeline work, several hundred protestors gradually assembled at the site, prompting law enforcement to intervene and arrest more than a dozen people. Among those were Chairman Archambault (in orange shirt in below video) and SRST Councilman Dana Yellow Fat, who quickly posted bond and were released.

“We have a voice, and we are here using it collectively in a respectful and peaceful manner,” Archambault said. “The Standing Rock Sioux Tribe is doing everything it can legally, through advocacy and by speaking directly to the powers that be who could have helped us before construction began. This has happened over and over, and we will not continue to be completely ignored and let the Army Corps of Engineers ride roughshod over our rights.”



Standing Rock Sioux Tribal Chairman David Archambault II (in orange shirt) was one of more than a dozen people arrested while protesting near the Dakota Access Pipeline construction site. (Photo: Courtesy Standing Rock Sioux Tribe)

Archambault said the United Nations Declaration on the Rights of Indigenous Peoples requires free, prior and informed consent for development impacting Indian land, territories and waters.

“We have a serious obligation, a core responsibility to our people and to our children, to protect our source of water,” he said. “Our people will receive no benefits from this pipeline, yet we are paying the ultimate price for it with our water. We will not stop asking the federal government and Army Corps to end their attacks on our water and our people.”

The proposed construction route is within a half-mile of the tribe's reservation border, sparking concerns for protection of cultural resources that remain with the land. Hunkpapa religious and cultural sites are situated along the route of the pipeline, including burial sites of ancestors.

"The land between the Cannonball River and the Heart River is sacred," said Jon Eagle Sr., STST's Tribal Historic Preservation Officer. "It's a historic place of commerce where enemy tribes camped peacefully within sight of each other because of the reverence they had for this place. In the area are sacred stones where our ancestors went to pray for good direction, strength and protection for the coming year. Those stones are still there, and our people still go there today."

Eagle worries that the pipeline will harm many tribal nations along the Missouri.

"Wherever the buffalo roamed our ancestors left evidence of their existence and connection to everything in creation," he said. "The aboriginal lands of the Oceti Sakonwin extend as far west as Wyoming and Montana, as far north as Canada, as far east as the Great Lakes, and as far south as Kansas. Construction along this corridor will disturb burial places and cultural sites."

According to the recently filed "motion for preliminary injunction" by the SRST, Dakota Access initially considered two possible routes: a northern route near Bismarck, and a southern route taking the pipeline to the border of the Standing Rock reservation. Federal law requires the Army Corps to review and deny or grant the company's permit applications to construct the pipeline. The southern route takes the pipeline across the Missouri River and Lake Oahe, implicating lands and water under federal jurisdiction.

In the initial environmental assessment, the maps utilized by Dakota Access and the Army Corps did not indicate that SRST's lands were close to the proposed Lake Oahe crossing. The company selected this route because the northern route "would be near and could jeopardize the drinking water of the residents in the city of Bismarck." The Army Corps of Engineers has not issued a public response to the newly filed litigation or protest. In a statement that appeared in a May 4 story in the *DesMoines Register*, Col. John Henderson, commander of the Corps' Omaha District said, "The U.S. Army Corps of Engineers is not an opponent or a proponent of the project. Our job is to consider impacts to the public and the environment as well as all applicable laws, regulations and policies associated yet with this permission and permit review process."

An Energy Transfer spokesperson told ICTMN, "It is important to note that Dakota Access does not cross any reservation land and is compliant with all regulations regarding tribal coordination and cultural resources. We have communicated with the various tribes that have an interest in the DAPL project as we recognize the traditional range of the Native Americans and their sensitivity to historic ranges for cultural properties. We are confident the USACE has adequately addressed the portion of the project subject to their review and where a NEPA analysis is required. They are the experts in this area, and we believe they have done an excellent job addressing any comments received to date."

Tribal leaders and environmental activists say the company's draft environmental assessment of December 9, 2015 did not mention that the route they chose brings the pipeline near the drinking water of tribal citizens. In fact, it omitted the existence of the tribe on all maps and analysis, in violation of environmental justice policies.

While federal law requires meaningful consultation with affected Indian nations, SRST governmental officials allege that didn’t happen despite numerous requests by the nation. Since they first heard of the proposed project in 2014, SRST leaders have voiced strong opposition to company, state and federal officials, and to Congress.

They met with the U.S. Environmental Protection Agency, U.S. Department of the Interior, and the Advisory Council on Historic Preservation to discuss the harm imposed by the pipeline. All three agencies subsequently wrote letters to the Army Corps expressing environmental and cultural resource concerns related to the pipeline.

Archambault said they’ve been working on many levels for more than seven months to stop construction. But the tribe and the three federal agencies were apparently ignored by the Army Corps, which moved ahead with permits for the pipeline.

In addition, Standing Rock youth ages 6–25 from the reservation vowed to run to Washington, D.C. to deliver a petition with 160,000 signatures on change.org opposing the pipeline to the President of the United States. After running for 2,200 miles, they were able to meet with Army Corps officials and hold rallies along the way; they returned home on August 10.

Standing Rock leadership has also put out the call to Indian country to stand in support of protecting their water, land and people. Dozens of Indian nations have already written letters and resolutions to support the Lakota people.

As for the growing number of people at the grassroots rally, Archambault publicly asked that everyone be peaceful and respectful of one another in the coming days.

“We want peaceful demonstrations and I need everyone to understand that what we are doing, in the manner we are doing it, is working,” he said. “By being peaceful and avoiding violence we are getting the attention needed to stop the pipeline.

The emphasis was on peace as a Lakota man smudged police officers at the scene of an ongoing protest at the construction site of the Dakota Access oil pipeline in North Dakota. (Photo: Courtesy Standing Rock Sioux Tribe)

“We’re getting the message out that all the wrongdoing that’s been done to Indian people will no longer be tolerated,” he said. “But we’re going about it in a peaceful and respectful manner. If we turn to violence, all that will be for nothing. I’m hoping and praying that through prayer and peace, for once the government will listen to us.”

Archambault also honored the Lakota youth who want to make a better future in his message.

“Our youth carry powerful messages when they speak, and we respect our youth and listen to them,” he said. “We honor and support the youth, runners, elders, campers, and supporters, and we are thankful for all the important efforts they’re making to protect our water.”

COLORADO:

Lyons Mayor: FBI, HUD Find Town Didn't Misuse Flood-recovery Funds (Boulder Daily Camera)

By Amelia Arvesen

Boulder (CO) Daily Camera, October 12, 2016

Lyons Mayor Connie Sullivan issued a statement Wednesday afternoon that the FBI and U.S. Department of Housing and Urban Development found that town staff did not personally benefit from the procurement of contracting with Front Range Land Solutions and funds were not misused.

However, the board agreed in a resolution Monday to terminate all contracts with the company owned by Rosi Dennett, who coordinated state-funded and federal-funded buyout services for Lyons residents starting in October 2014, following a devastating flood one year earlier.

"We didn't cancel it because we thought she did anything wrong," Sullivan said. "We thought she did a nice job and we think the town benefitted from her work."

The statement from Sullivan, on behalf of the Town Board of Trustees, said that HUD does not intend to gather additional information from Lyons, and all original documents taken during last week's probe were returned.

She said the HUD investigation is not complete, because there might be additional administrative work required to close the file.

HUD Office of Inspector General spokesman Darryl Madden, based in Washington, D.C., previously said the office's role is to ensure grants given to communities after disasters are being used appropriately, but beyond that he could not comment on the mayor's most recent statement.

"We're not confirming or denying that an investigation even exists," he said in response to the statement released Wednesday.

Documents specified in the subpoena made public by the town on Friday include "All documents pertaining to negotiations between Front Range Land Solutions and the Town of Lyons."

It also sought all "emails, letters and other correspondence and memoranda" concerning representatives of Front Range Land Solutions, as well as invoices, bills, receipts and other documents reflecting "charges or payment with respect to Front Range Land Solutions and/or Rosi Dennett."

Sullivan also said the few remaining buyouts the town is still trying to close are now being handled by Christy Crosser, a grant coordinator with the town.

She said the board was not able to temporarily suspend Dennett's services, so their choice was to terminate or continue.

"It was really just a procedural thing; we just didn't want to have any work being done," Sullivan said. " ... The contract did not have a clause for suspending."

Dennett has not answered or returned multiple calls and emails since Friday, when the mayor first released the subpoena served by federal authorities naming her company.

The Times-Call submitted a Colorado Open Records Act request Monday, asking for copies of previous and current contracts the Town of Lyons has with Front Range Land Solutions and/or Dennett, as well as any emails with people associated with that company and/or the company owner.

Sullivan said in Friday's statement that the FBI was not proceeding with a federal case.

She said in her Wednesday statement that the board plans to start an "internal review of the circumstances that prompted the external investigation" and "intends to complete this review as quickly and as efficiently as possible."

"The internal review will focus on the documentation processes and related circumstances surrounding contract procurement so that any needed corrective actions can be identified and implemented by the Board," she said in the statement.

Town Administrator Victoria Simonsen and Town Clerk Debra Anthony remain on leave until the board's process is complete.

Additional documents sought by the federal subpoena included all of Lyons' documents relating to the procurement processes and correspondence concerning the Community Development Block Grant Disaster Recovery Program and the Hazardous Mitigation Grant Program.

The subpoena also asked for all documents relating to the award of federal recovery grants to Front Range Land Solutions.

Sullivan said Dennett's contract to date has totaled about $350,000. She said she did not have figures on hand for how much Federal Emergency Management Agency and Community Development Block Grant Disaster Recovery funds Dennett handled.

Additionally, Sullivan said a report issued by the U.S. Department of Homeland Security Office of Inspector General in April was not causal to the investigation, and the investigation did not involve how grant funds for large flood-recovery projects were procured or managed.

FEDS will not prosecute EPA official linked to Gold King Mine disaster (The Denver Post)

The U.S. Attorney in Denver will not prosecute an Environmental Protection Agency employee involved in the Gold King Mine disaster, leaving it to the agency to determine administrative action against the employee.

A decision made Oct. 6 was based on information submitted by the EPA's Office of Inspector General to federal prosecutors after a year-long internal probe.

Instead of a criminal prosecution, the EPA's internal investigators "will submit a report of an investigation to the agency that details the findings of our investigation," OIG spokesman Jeff Lagda said in response to queries.

"The agency, not the OIG, will then determine what administrative action they may take against the employee based on that report," Lagda said. "The EPA will have to report to the OIG what administrative action the EPA will undertake."

The EPA's quasi-independent OIG launched an investigation into the Gold King disaster more than a year ago. Federal officials later, driven by members of Congress, began a criminal probe.

The Aug. 5, 2015, blowout at the Gold King Mine above Silverton in southwestern Colorado — accidentally triggered by an EPA-run teamled by on-scene coordinator Hays Griswold — fouled waterways in three states and on American Indian lands. An estimated 3 million gallons of acid mine drainage containing heavy metals including arsenic, cadmium, lead, and mercury spilled into Animas River headwaters and turned the Animas mustard-yellow.

The OIG is part of the EPA and investigates agency activities.

The OIG investigators "presented facts to the U.S. Attorney's Office" in Denver "about whether an EPA employee may have violated" the Clean Water Act and the statute prohibiting false statements, according to a statement Lagda issued Wednesday afternoon.

Acting U.S. Attorney Bob Troyer could not be reached, and spokesman Jeff Dorschner declined to comment.

"It has been a long-standing policy that the U.S. Attorney's Office does not discuss declinations," Dorschner said.

EPA investigators now will return to completing work requested by Congress related to the Gold King Mine spill, Lagda said.

Sens. John McCain of Arizona and John Barrasso of Wyoming, members of the Senate Committee on Indian Affairs, in May sent a letter to Attorney General Loretta Lynch urging a criminal probe.

Other federal agencies also have reviewed EPA conduct linked to the Gold King Mine. An Interior Department report issued last fall deemed the Gold King disaster preventable, the result of errors over many years in handling toxic discharges from inactive mines.

House Republicans on Wednesday bristled and demanded a briefing before Oct. 26 by the Justice Department explaining the decision not to prosecute.

“By not taking up the case, the Department of Justice looks like it is going easy on its colleagues in EPA,” said a letter from members of the House Committee on Natural Resources.

Justice officials’ actions “give the appearance of hypocrisy, and seem to indicate that there is one set of rules for private citizens and another for the federal government,” the letter said. “The EPA disaster deserves the same level of accountability to which private citizens are held.”

FBI probes motive after bomb left at Colorado police station (The Denver Post)

NEDERLAND — The FBI is trying to determine why someone left an explosive device in a backpack in front of the police department of a small Colorado mountain town, prompting evacuations in the community’s main retail area.

A Nederland police detective found the bag outside the building when he began his shift Tuesday morning and brought it inside because he thought it was lost property. He opened it and found “suspicious articles” that were later determined to be an improvised explosive device, police Marshal Paul Carrill said.

The FBI, which had assumed control of the investigation by Wednesday afternoon, said the device was active but failed to detonate. Two robots searched the backpack, and multiple pieces were removed from the device and sent to a forensics lab.

“It’s difficult to interpret why someone would do this,” said Carrill, who declined to disclose if police have identified the backpack’s owner. “It is my hope and intent, for the health and safety of the community to get to the bottom of why.”

The police department is in the town’s main retail center, which includes a grocery store and multiple shops.

Carrill urged the public to come forward with information because “the individual or individuals who may have assembled this could be a risk to their neighbors.”

Nederland is about 15 miles southwest of Boulder.

Weld County officials drawing criticism for emergency management training in Breckenridge (Complete Colorado)

October 12, 2016 5:04 PM· **By Sherrie Peif**

Editors Note: This is the third story in a series of stories about the board of Weld County Commissioners and issues brought to the Weld County Council for reasons to audit the board's performance. The previous two look at the commissioner's decision to form a charter review committee and the criticisms leveled at the commissioners by residents. Next up, Complete Colorado will look at spending by the commissioners on conferences, meals and travel and potential improprieties.

GREELEY – Many praised the board of Weld County Commissioners both during and after the 2013 flood because their actions saved time, money, and in some cases, headaches for Weld residents.

However, how much the county should pay to train its employees for just such an event recently came under fire. Also who could help pay the bill was questioned. So, rather than accept direct donations from corporate partners, the county directed those entities to donate to the United Way, who would then turn around and cut a check to the county.

At several recent meetings of both the board of Weld County Commissioners and the Weld County Council, residents have said a recent training trip to Breckenridge was too much and accused the commissioners of using United Way to launder donations from organizations that depend on the commissioners for decisions on land use in the county.

Commissioners say the county's response in 2013 was the result of ongoing training, including a 2012 trip to Emmetsburg, Md. for specialized training provided and paid for by FEMA.

Commissioners were so pleased by the hands-on experiences employees got that they decided to replicate it on their own this year when a subsequent grant application was unsuccessful.

In August, 41 county employees and 20 other emergency responders from other organizations spent four days in Breckenridge training for an emergency.

However, some – including one of the commissioners – said the training could have taken place for much less than the $45,000 the Breckenridge location cost.

"We budgeted this for $15,000," said Commissioner Sean Conway at a July 18 regular board meeting. "The taxpayers paid a lot of money for (Weld's Emergency Operations Center) for when a disaster's going to happen."

According to the Office of Emergency Management's (OEM) website, the final ticket price was $41,455.

Through a Colorado Open Records Act request, Complete Colorado also found another nearly $4,000 in expenses for employee transportation and meals, making the grand total more than $45,000. Some employees on the attendance list had not yet submitted expense reports at the time of the request.

The reason given for going to Breckenridge was to keep people from straying too far from the event.

"One of the biggest concerns I have about doing this training and investing in it is people coming and going and saying, 'well I have this other meeting scheduled,'" Commissioner Julie Cozad said at that July meeting. "It just takes away from the overall training. I think it's really important that the people that do go, are there, and they're focused, and they're working on the training together for the full entire time."

Commissioner Barbara Kirkmeyer told the Greeley Tribune something similar.

"If it's too close, people will just pop out for some reason or another," the Tribune article reported. "Maybe they'd go home for lunch or go run an errand. They can't leave meetings for their own offices when they're more than two hours away from them."

However, both Kirkmeyer and Commissioner Steve Moreno left the conference early.

Moreno left to attend a national clerk and recorder's conference in Philadelphia.

When questioned if it was appropriate to leave the training for the clerk's conference considering he is no longer the clerk and recorder in Weld County, Moreno said the Election Center board believes his perspective as a commissioner is a valuable resource.

"I was first asked to serve on the Board of Directors for the Election Center in 2012 when I was still Weld County Clerk & Recorder," Moreno said. "I was going to resign when I was elected Weld County Commissioner, but the Chairman and members of the Board asked if I would consider continuing my service in my capacity as a county commissioner on their board. … They felt my insight to the board from the position of commissioner, who oversees county budgets including elections, could be beneficial to the group."

Moreno is also currently hearing criticism that he supports changing the clerk and recorder position from an elected one to an appointed one, so that he can get his old job back.

Moreno was term limited from the position in 2014. Moreno has denied that and said publicly he will not support that change.

Kirkmeyer left to attend an award's banquet in Fort Collins. She said she believed it was important to represent Weld County on the North I-25 Coalition, which was receiving the award.

"I think it is appropriate for an elected official to represent the organizations to which they belong, especially when being recognized for their positive work on a project crucial not only to Weld County but the Northern Colorado region as well," Kirkmeyer said.

She also said she believed her prior experience in emergency management helped during her missing time.

"I not only attended the FEMA training with the county in 2012, but I also had direct experience with disasters and disaster recovery during my role as acting director of the Office of Emergency Management at (Department of Local Affairs)," Kirkmeyer said. "My role in the training was not so much as that of student new to the world of EOCs and disasters but as a contributing mentor and facilitator for the training and the exercise."

She pointed out that she didn't miss any of the actual training exercises and was briefed on what she did miss over lunch.

Commissioner Conway, who attended the same awards ceremony in Fort Collins, did not attend the Breckenridge training out of principal, he said.

"I did not attend the exercise because I felt the exercise should have been conducted in the Weld County EOC, which we constructed at great taxpayer expense in 2011," Conway said. "The 2016 Budget allocated $15,000 to do an exercise. The decision to move the exercise from Weld County to Breckenridge resort resulted in tens of thousands dollars of additional taxpayer expense, which I believed was unnecessary. The four days of the exercise, I remained in Weld County to hold down the fort at the commissioner's office while my four fellow commissioners were at the exercise."

Corporate donations processed through United Way

The debate over where and how much, is just one concern for residents who have spoken repeatedly against it. Who paid for the training and how has also been a matter of concern.
"I would also raise the question in terms of some of the sponsorships I've seen," Conway said at that July meeting. "I think we need to be very careful in terms of what financial sponsorships we have in regards to this and in regards to conflict of interest."
Conway was referring to what the county has said was $11,500 in sponsorships for the event that came from companies such as Xcel Energy, BASE Tactical, Waste Management, PDC Energy, TetraTech, Martin Marietta and Felsburg Holt & Ullevig, all companies that at some point have come before the board for quasi-judicial hearings on land use and other issues and are likely to again. Those hearings require commissioners to be judge-like in their fact findings.
Somewhere between the July meeting and the training, Weld County Attorney Bruce Barker weighed in on the matter because in a letter also obtained through open records, OEM Director Roy Rudisill asked those partners to reissue their donations to the United Way instead of the county.

MONTANA:

Oct. 19 events focus on natural disasters and how to survive them- Helena Independent Record

AL KNAUBER Independent Record October 12, 2016

Wednesday's meeting to talk about what can be done to reduce the effect of disasters couldn't be timelier.

The Oct. 19 event at 3 p.m. in the lower level of the Law Enforcement Center is part of the five-year update of the county's pre-disaster mitigation plan.

It comes on the same day as the 10:19 a.m. statewide earthquake drill.

Those who attend the pre-disaster mitigation plan meeting are invited to bring local knowledge and ideas on how to mitigate the effects of hazards.

"The (pre-disaster mitigation) plan will reexamine the wide range of hazards that affect Lewis and Clark County, recent hazard events, the probability of future occurrences, and the vulnerabilities of structures and the population. From that risk assessment, a plan of action to mitigate these hazards will be developed and/or updated," Daphne Digrindakis, senior project manager with Tetra Tech Inc., which has been hired by the county to assist in updating the plan, wrote in an email.

The update is also required for the county to apply to the Federal Emergency Management Agency for funds to offset the damage from disasters.

FEMA funding was used by the county this year to help lease the Helena Trap Club gravel pit for use in a flood emergency to divert some of the water there temporarily.

Wildfire and flooding will be discussed and how the impact of these events can be reduced, according to a news release.

Earthquakes, another of the natural disasters that has happened in Lewis and Clark County and Helena, will also be a topic for discussion.

The Oct. 18, 1935, earthquake damaged much of Helena and was the worst of a seven-month series of quakes that lasted from October 1935 into April 1936, said Paul Spengler, the county's disaster and emergency services response coordinator.

The statewide annual earthquake drill, Spengler said, will last a few minutes.

Last year more than 160,000 participated in The Great Montana Shakeout, according to the program's website, where people can register to be included in this year's event.

As of Wednesday more than 98,000 people were registered, the website noted.

Those who participate in the drill will seek shelter inside their buildings as they would while waiting for the ground to cease shaking from an actual earthquake, Spengler said.

After that wait, when there is less danger of building facades collapsing into streets, people will exit their buildings and assemble in pre-determined locations to be tallied, Spengler explained.

This tally would allow people to know if anyone was trapped inside a building by an earthquake.

The Shakeout, he added, is a way to keep the memory alive and prepare for the day when another earthquake occurs.

While clearing brush and trees from around homes is one of the pre-disaster mitigation steps that can be taken for those who live in areas that could be burned by wildfire, removing heavy items from high shelving in homes is also a means to reduce the potential threat to life from earthquakes, Spengler noted

Storm system could bring potential for rockslides- KECI TV Missoula

By: Barrett Tryon
Updated: Oct 13, 2016 07:24 AM MDT
MISSOULA, Mont. - Weather could have a big impact on your travel plans late Thursday through Friday in northwest Montana.

The Severe Weather Alert team is tracking a strong storm that just moved through the Seattle area — and is headed our way.

With the risk of severe weather, rockslides could be a problem in places like Lookout Pass, where Interstate 90 crosses the state line into Idaho.

Drivers should also be prepared for possible ponding on roadways and the potential for hydroplaning.

USDA AG disaster declared in county- Chouteau Acantha News

By Nancy Thornton Acantha reporter -15 hrs ago

The U.S. Department of Agriculture on Oct. 5 designated Teton County and 10 other counties in Montana as primary natural disaster designations because of a recent drought. Those counties are Big Horn, Carbon, Flathead, Granite, Lewis and Clark, Missoula, Park, Powell, Stillwater, Sweet Grass and Teton counties.

Farmers and ranchers in 20 other counties in Montana also qualified for natural disaster assistance because their counties are contiguous. Those counties include Cascade, Chouteau, Glacier and Pondera counties, among others.

All qualified farm operators in the designated areas are now eligible for low interest emergency loans from USDA's Farm Service Agency provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses.

FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the emergency loan program, to help eligible farmers recover from adversity, a USDA press release said.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program, Livestock Forage Disaster Program, Livestock Indemnity Program, Emergency Assistance for Livestock, Honeybees and Farm-Raised Fish Program and the Tree Assistance Program.

Interested farmers may contact the local USDA Service Center in Choteau for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online at http://disaster.fsa.usda.gov.

Free smoke alarms for fire prevention month in Great Falls-Great Falls Tribune

Jenn Rowell, jrowell@greatfallstribune.com 5:49 p.m. MDT October 11, 2016

This week is National Fire Prevention Week and free smoke alarms are available to Great Falls residents through the Montana Red Cross later this month.

On Oct. 21, volunteers through the Red Cross, Great Falls Fire/Rescue, Malmstrom Air Force Base, PayneWest Insurance and Cascade County United Way will be installing free smoke alarms in homes without them and teaching about home fire safety.

Great Falls residents can sign up to have up to three free smoke alarms installed by calling the Red Cross at 800-272-6668 before Oct. 21.

The event is part of an ongoing nationwide Red Cross campaign to reduce death and injuries from home fires by as much as 25 percent in five years.

"While we were able to install over 270 alarms in Great Falls last year, we know there are homes that still need them," said Diane Wright, executive director of Montana Red Cross.

Smoke alarms should be replaced every 10 years, according to the National Fire Protection Association.

In addition to installing the smoke alarms, volunteers will also share information about fire safety, including how to draft a fire escape plan, Wright said. The visits take about 20 minutes and the Great Falls event will install at least 100 free smoke alarms, Wright said.

To learn more about fire safety, visit redcross.org/homefires.

NORTH DAKOTA:

ND receives federal hazardous materials safety funds (The Bakken)

By Patrick C. Miller | October 12, 2016

The U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) announced that North Dakota will receive $194,331 in funds to aid personnel responding to hazardous material-related emergencies.

PHMSA is issuing $20.4 million in Hazardous Materials Emergency Preparedness (HMEP) grants to states, territories and Native American tribes to enhance their ability to respond to hazardous materials transportation incidents.

Texas and California will get $1.5 million each. The states receiving a half million dollars or more are Alabama, Florida, Illinois, Louisiana, Michigan, New York, Ohio and Pennsylvania. No tribes in the Dakotas received funding.

“The department’s partnership with our states, territories and tribes is an integral component of our strong national safety program,” said Anthony Foxx, U.S. transportation secretary. “These grants are important tools for communities to plan and stay prepared for transportation incidents involving hazardous materials, including those involving high-hazard flammable trains.”

The HMEP grant program is part of DOT’s comprehensive approach to improving the safe transportation of crude oil and other hazardous material across the country. PHMSA’s HMEP grants program allows recipients to design and implement planning and training programs according to their specific needs.

“Our nation’s emergency responders have an immensely challenging job, and this grant funding supports their efforts to protect our communities,” said Marie Therese Dominguez, PHMSA administrator. “PHMSA has taken a comprehensive approach to enhance the safe transportation of energy products that includes prevention, mitigation, and emergency preparedness and response. These grants are another critical element of our focus to improve safety.”

For the current grant cycle, HMEP applicants are encouraged to allocate funding for:

- Developing or revising emergency plans and training activities to account for bulk transportation of energy product by rail and over the road;

- Conducting commodity flow studies to determine the frequency and quantity of hazardous materials shipments being transported through local communities; and

- Training emergency responders to respond appropriately to incidents involving hazardous materials.

UTAH:

How is the Red Cross Working to Reduce House Fire Deaths? Good 4 Utah.com KYVX- TV

Updated 10/12 2016 10:02PM

The Red Cross has committed to an ongoing nationwide campaign to reduce the number of home fire deaths and injuries by 25 percent over the next few years.

As part of Fire Prevention Week, Rich Woodruff from the Utah Red Cross explains why it is so important to have working smoke detectors in your home.

According to the Red Cross, the biggest disaster threat in the United States isn't floods, hurricanes or tornadoes; it's fire. The American Red Cross responds to nearly 70,000 disasters year- one every eight minutes and most are house fires.

Home fires can happen quickly, devastating lives and property. But unlike other disasters, most home fires can be prevented.

For more information about fire safety and how you can help support the Red Cross visit www.redcross.org.

72 Hour Kits: What You Really Need- Good 4 Utah.com

By MICHELLE MONEY | mmoney@good4utah.com
Updated 10/12 2016 11:01AM

Have you ever wondered what you really need in a 72 hour kit? Debbie Kent from Store This Not That has done all the research and work for you.

72 hour kits are geared to help you survive for 3 days after something BIG has happened: earthquake, flooding, hurricane, tornado, EMP, etc. In other words, a disaster where the power is

out, your house is likely unsafe (or you would be staying there) or you are at work and need to get home and you are on the move taking your kit with you, hopefully in a car, in worst case scenarios on foot.

Maybe you only have to travel a mile or two to get somewhere safe or maybe you have to travel a long distance, either way the hope is your kit can carry you through until you arrive safely. These kinds of survival bags usually contain the bare bones of survival, keeping them somewhat small and lightweight and relying heavily on the skills of the person carrying them. Their contents include items for: first aid, fire starting, simple tools and shelter, food and food procurement, water and filtering, light, personal items and safety.

WYOMING:

Funds to be used for burned-out areas from summer fires – Cody Enterprise

By SCOTT KOLB Updated 17 hrs ago

On Oct. 6 the Park County Commissioners voted to approve county sponsorship of a Natural Resources Conservation Service program which provides federal funds for the rehabilitation of land that burned in this summer's wildfires.

The funds would be disbursed under the Emergency Watershed Protection Program from the Conservation Service. This money is usually used for flood control, which could be a problem if the burned-out areas from this summer's fires aren't re-seeded.

"We request Federal assistance ... to restore damages to private lands in Park County sustained by wildfires during the months of August and September," stated the letter signed by the commissioners. "We understand, as sponsors of this program that our responsibilities will include, where applicable, acquiring land rights and any permits needed to construct; and, if required, to operate and maintain the proposed measures."

Commissioner Joe Tilden abstained from the vote due to a potential conflict of interest as he is listed as an employee of the Big Hat Ranch, one of the landowners likely to receive assistance.

"This is the first time this program has been used for wildfires," commissioner Lee Livingston reminded the board. He then suggested entire watershed areas be brought in under the program. The re-seeding will be done not only to prevent erosion, but to prevent invasive cheatgrass from taking over the scorched land.

The letter, approved and signed by the commissioners, will move the process forward. Landowners affected by the fires will be contacted by the county to get into the program.

In other business, bids were taken for the county to purchase two new motor graders. The purchases fall under a buyback program from John Deere in which the company purchases the old graders for essentially the price the county paid for the equipment two years ago.

“With the budget being tight, we really scaled back on what we did with equipment,” said Brian Edwards, an engineer for Park County.

The bid went to Honnen Equipment of Mills. With the trade-in value, it will cost the County $43,776 to buy two new graders as well as pay for warranties.

There was $50,000 in the budget to cover the expense, so the purchase came under the projected cost. The vote was unanimous to approve this purchase. The County will stay in the two-year buyback plan and can opt for as long as five years.

Commissioners Bucky Hall and Joe Tilden gave a report on their recent trips to the Wyoming Association of County Officers and Wyoming County Commissioners Association meetings.

In their meeting with the other county commissioners from around the state, Hall and Tilden sat in on discussions about pressing business like insurance costs.

“If all the counties banded together, we would save a lot of money on worker’s compensation going through the WCCA,” Hall said. “This is worth looking into.”

Talks were also held about the role of special districts within a county. This also brought up the contentious subject of mill levies for these special districts, which the commissioners are asked to rubber stamp even if they oppose or would like to modify the measures.

A court case in Johnson County is pending on this issue. The case involves the Johnson County commission, which refused to approve some levies for special districts. That decision not to approve the special district mill levies has been challenged in court.

Tilden had some good news to report. It appears the governor is trying to free up money for the struggling counties to use in meeting their yearly budgets.

“The governor said he will ask for interim funding for the counties,” Tilden said. “He said we have a rainy day fund and it’s pouring on the counties.”

Not only did they discuss business at these meetings, but there was also some quality entertainment. Tilden told the board that they had a good magician at the conference and he put on a fine show.

In other business at the meeting:

•A boundary line adjustment for Ben Johnson was approved in rural Park County.

•Approval was given to allow the board chairman to sign for a Homeland Security grant of $40,000.

•Reviewed and signed three Department of Revenue Notice of Valuation Changes. These dealt with two tax rebates for Marathon Oil and Vanguard Operating, LLC.

•Approved changes to the flood plain permit for the Brown Thomas Meadow bank stabilization project.

• Request approved to hire a new part-time janitor at the courthouse. Failure to approve this request would’ve resulted in future overtime for a salaried employee.

- TANF grant recipients were approved for seven different groups. Big Brothers and Sisters of NW Wyoming, Boys and Girls Club of Park Co., Crisis Intervention Services, Children's Resource Center, NW College, NW Wyoming Family Planning and Yellowstone Country Assistance Network.

USDA designates Park County in Wyoming as a primary natural disaster area –Northern Wyoming Daily News

October 11, 2016

CASPER — The U.S. Department of Agriculture (USDA) has designated Park County in Wyoming as a primary natural disaster area due to a recent drought.

"Our hearts go out to those Wyoming farmers and ranchers affected by recent natural disasters," said Agriculture Secretary Tom Vilsack. "President Obama and I are committed to ensuring that agriculture remains a bright spot in our nation's economy by sustaining the successes of America's farmers, ranchers, and rural communities through these difficult times. We're also telling Wyoming producers that USDA stands with you and your communities when severe weather and natural disasters threaten to disrupt your livelihood."

Farmers and ranchers in Big Horn, Fremont, Hot Springs, Teton and Washakie counties in Wyoming also qualify for natural disaster assistance because their counties are contiguous.

Farmers and ranchers in Carbon, Gallatin and Park counties in Montana also qualify for natural disaster assistance because their counties are contiguous.

All counties listed above were designated natural disaster areas on Oct. 5, 2016, making all qualified farm operators in the designated areas eligible for low interest emergency (EM) loans from USDA's Farm Service Agency (FSA), provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses. FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the EM loan program, to help eligible farmers recover from adversity.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program; Livestock Forage Disaster Program; Livestock Indemnity Program; Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program; and the Tree Assistance Program. Interested farmers may contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online athttp://disaster.fsa.usda.gov.

FSA news releases are available on FSA's website at www.fsa.usda.gov via the "Newsroom" link.

FEMA-RELATED STORIES:

Weather Forecasters Can't Manipulate Hurricane Warnings — Here's Why (Houston Chronicle)

Houston Chronicle, October 12, 2016

Many mini-dramas develop during major disasters like Hurricane Matthew, which has left a trail of devastation in the Caribbean and the southeastern United States. One such drama occurred outside of the storm zone: Conservative news blogger Matt Drudge accused the federal government last week of hyping the threat to the U.S. coast, purportedly to play up possible links between extreme weather and climate change.

The Twitter universe rightfully jumped on this claim, calling it extremely irresponsible. Some critics invited Drudge to stand on the central Florida coast and witness the passage of Matthew so he could personally verify its strength.

But here is a larger, key point: It would be virtually impossible for our government, or any weather service, to intentionally overhype or downplay the real risks of a major hurricane as it approaches the United States.

I have been involved with operational weather forecasting for nearly 40 years. From 2005 through 2009 I was responsible for typhoon forecasts that the Defense Department's Joint Typhoon Warning Center, or JTWC, issued for the western Pacific and Indian oceans. After retiring from the Navy, I served as chief operating officer for the National Oceanic and Atmospheric Administration. In this position I was responsible for the National Weather Service and its components, including the National Hurricane Center, or NHC.

During my career I have seen the internet and social media transform weather forecasting in general, and hurricane forecasting in particular, from a skill that was seen and practiced by a small community of specialists into one of the most transparent technical endeavors we do on a routine basis. Every forecaster I have ever worked with – military or civilian – wants to get predictions right. And even if they wanted to shade the forecast one way or another to support some agenda, it would be impossible to do it in today's networked world.

In the pre-internet era, hurricane forecasting was more of an art than a science. Modern weather forecasting developed in the 1960s with the advent of radar, computers and satellites. Well into the 1980s, forecasters were still working out how best to integrate satellite data into computer-based forecasts, and both satellite measurements and computing power were crude by today's standards.

Observations and computer prediction models traveled on government-only, proprietary circuits, with only limited access by private forecasters or academia. Government forecasters would share storm track and intensity forecasts with the public, along with short written discussions (TRANSMITTED IN ALL CAPS), but little else. The actual processes for deriving forecasts were closely held, available only to members of a very select and specialized guild. Private-sector forecasting of hurricanes was in its infancy, hampered by a lack of real-time information.

Starting in the 1990s personal computers, dial-up access and then the internet fundamentally changed the way weather information could be accessed and distributed. Today global weather models from the United States, Canada, United Kingdom and the European Centre for Medium Range Weather Forecasting are available to anyone with an internet connection. When the NHC directs U.S. Air Force Reserve personnel or NOAA "Hurricane Hunters" to fly a hurricane reconnaissance mission, the data they collect are posted virtually in real time. Satellite images from the JTWC or NHC forecast are available online free of charge.

For hurricanes, the federal government produces one official forecast from either the NHC for the eastern Pacific and Atlantic oceans or the JTWC for the western Pacific and Indian oceans. This forecast draws on computer-based weather forecast models, an assessment of the storm's real-time characteristics, and the knowledge of a highly trained typhoon duty officer or hurricane specialist. It would be obvious instantaneously if the forecast deviated substantially from observed conditions or from a blend of the computerized forecast guidance without providing some meteorological or physical explanation.

This level of transparency is fairly new. As recently as the early 2000s, there were significant and sometimes emotional debates within the weather forecasting community over how much computer modeling data and information from weather observations should be publicly available in real time. Some forecasters worried (and still do now) that users could misinterpret individual pieces of data or second-guess official forecasts. Over time, however, consensus has grown in favor of making all the data available to anyone interested, so that everyone can see how forecasts are put together.

Now that so much weather data is publicly available, the explosion of social media guarantees that thousands of observers are looking over forecasters' shoulders. And forecasts get a lot of attention, especially when they involve extreme events.

Hundreds of people with varying credentials comment on every tropical storm, hurricane or cluster of thunderstorms. Popular sites like Weather Underground and Windyty further attest to broad public interest in all things meteorological.

If the NHC or JTWC appeared to be disregarding either observations or reliable forecast models without explanation, weather enthusiasts would quickly point this out on social media, and major news media would pick up the story. We don't see this in headlines because it doesn't happen.

With a few days of hindsight, it's clear that the NHC was eye-wateringly accurate in its forecasts of where Matthew would be two days in advance, and pretty good at forecasting the storm's position, three, four, and even five days in advance. NHC initially forecast that the storm would remain east of the U.S. coast in the Bahamas. Gradually the storm track "walked" westwards as the computer forecast guidance trended in that direction. Matthew also traveled close to the coast farther north than initially forecast, producing extreme rainfall in North Carolina (which can be physically linked to a warming climate). This aspect was predicted with impressive precision up to five days in advance.

Weather forecasters understand that they walk on a knife's edge between overwarning on the one hand – which can produce false alarms and complacency – and underwarning on the other, potentially trapping people in life-threatening situations. The NHC, backed by a national and international network of observers, scientists and computer models, did an amazing job on a very dangerous storm. There always are lessons to be learned, but the bottom line is that we owe them thanks and Mr. Drudge owes them an apology.

– David Titley, Pennsylvania State University

Federal Agencies Deploy Thousands Of Feds For Hurricane Matthew Response (Government Executive)

By Eric Katz

Government Executive, October 12, 2016

Federal agencies have deployed more than 10,000 employees, including nearly 3,000 civilians, to five states and three countries to assist local communities as they recover from the devastation wrought by Hurricane Matthew.

The Federal Emergency Management Agency is spearheading the efforts, establishing survivor assistance, incident management, and search and rescue teams throughout the Carolinas, Georgia and Florida in response to disaster declarations issued by President Obama. FEMA has deployed 1,500 employees in an effort to distribute 6.9 million meals, 4.3 million liters of water, 89,000 blankets and 522 generators to affected regions.

Hundreds of thousands remain without power in North Carolina, where flooding has worsened in recent days. More than 1,000 deaths are attributed to the storm, mostly in Haiti but including at least 38 in the United States. More than a dozen federal agencies and components have joined the response efforts, deploying approximately 11,000 personnel, according to their estimates. Here is a look at what each agency is doing:

Defense Department

The National Guard initially deployed 8,000 guardsmen to prepare for the storm and help in the aftermath, though that number dipped to 6,000 on Wednesday. The citizen soldiers have rescued people and animals, cleared debris and helped combat flooding. More guardsmen were activated as flooding in North Carolina worsened.

The U.S. Northern Command has staffed seven Incident Support Bases in affected states and assisted in deploying resources. The Army Corps of Engineers has sent 100 employees to the hurricane zone to assist with power restoration, coastal damage assessments, emergency operation center activations and dam inspections.

Health and Human Services Department

The U.S. Public Health Service's National Disaster Medical System and HHS' Office of the Assistant Secretary for Preparedness and Response has deployed 570 personnel to assist in medical emergency efforts, with an additional 350 individuals on alert for possible activation. HHS sent a 46-member Disaster Medical Assistance Team to Brevard County, Florida, to assist a hospital in handling the surge in the demand for emergency services.

Interior Department

The National Park Service deployed more than 130 personnel for Matthew response to "coordinate and oversee the assessment and recovery" of affected parks. Ten park units remain closed due to the storm as NPS continues to monitor the damage.

The U.S. Geological Survey organized the largest deployment in its history, posting 393 sensors in 290 locations. Now, 40 crews are collecting them and additional crews are measuring flooding and repairing gauges. USGS is posting all of the data it collects on its website. The Fish and Wildlife Service said 19 wildlife refuges and two fish hatcheries "remain closed until it is safe for staff to return."

Justice Department

Justice has deployed 77 law enforcement personnel to affected states, where a spokesman said they have conducted search and rescue missions along the coasts of North and South Carolina. They remain in the region awaiting additional missions, the spokesman said, and 50 more law enforcement officers and medics are on stand-by for deployment if necessary.

U.S. Agency for International Development

USAID initially deployed Disaster Assistance Response Teams to Jamaica, Haiti and the Bahamas in anticipation of the storm, though the teams have since focused their efforts in just the latter two countries. More than 60 employees are currently deployed, according to a spokesman. USAID initially made $400,000 in aid available to the affected countries, and plans to make more available shortly. It has also sent hygiene kits, plastic sheeting, kitchen sets, blankets, collapsible water containers and water storage units to the region.

"USAID is working with the government of Haiti and local non-governmental organizations to continually assess the damage and ensure life-saving emergency relief reaches people in need, especially in the hard-hit regions along the country's southwest peninsula," said Gayle Smith, the agency's administrator. She added the efforts were expected to benefit 100,000 people.

Transportation Department

The Federal Highway Administration deployed “about a dozen” employees for storm response, including through making damage assessments of roads and bridges. The Federal Motor Carrier Safety Association is issuing necessary emergency waivers and permits, while the Federal Aviation Administration has issued emergency flight restrictions.

Energy Department

Energy has deployed nearly a dozen employees to FEMA’s National Response Coordination Center and other regional centers, a spokeswoman said. Energy officials have worked with industry to assist it in restoring power, including by holding daily calls both before and after the storm.

Homeland Security Department

In addition to FEMA’s efforts, U.S. Citizenship and Immigration Services has made relief available to those whose “application, petition or immigration status” has been affected by the storm. The Coast Guard has assisted in search and rescue missions and ensured safe commercial vessel navigation. It is also providing disaster relief in Haiti.

Small Business Administration

SBA has made low-interest disaster loans available in North Carolina, and deployed staff to conduct “preliminary damage assessments” in affected regions.

Corporation for National and Community Service

CNCS deployed more than 500 AmeriCorps members to assist with various FEMA, state, local and volunteer organizations’ efforts.

Feds To Fund Plans To Take On Zika Virus With Drones (NBC News)

By Maggie Fox

NBC News, October 12, 2016

Two groups that want to deploy drones to fight Zika won support from the federal government Wednesday.

They funding will go to helping them develop drones that could drop off Zika-fighting mosquitoes or ferry lab samples from remote regions.

They join a batch of inventive solutions for fighting Zika and other mosquito-borne diseases being funded by the U.S. Agency for International Development (USAID).

Delaware-based WeRobotics will use seed money from USAID to develop drones that can carry sterile mosquitoes into hard-to-reach zones. Flooding mosquito populations with sterile insects can greatly reduce populations as lovesick bugs waste time and energy mating with barren sweethearts.

“Usually, when you think about fighting Zika you think of trucks driving up and down and fogging streets,” said Wendy Taylor, who directs USAID’s Center for Accelerating Innovation and Impact.

But there are plenty of places with packed humanity vulnerable to the Zika-carrying Aedes mosquitoes that are also hard to reach. “Mosquitoes are pretty small and they are pretty light so you can pack a lot of punch in these small devices.”

“Think about Rio — think about the favelas,” Taylor said, describing the haphazard neighborhoods that define parts of Brazil’s coastal metropolis.

“It might be easier to use a UAV (unmanned aerial vehicle) instead of driving up and down small, winding streets with a truck.”

The idea is to pack the drones with sterile mosquitoes and drop them into mosquito hot zones. Or they could deliver a load to hard-to-reach zones that cannot quite be reached by trucks, larger aircraft or people on foot.

“Those little spots can turn into hot spots that spread,” Taylor said.

USAID is using $30 million borrowed from Ebola-fighting efforts to pay for its “Grand Challenge” grants.

The Obama administration pulled the Ebola cash when Congress failed to provide a requested $1.9 billion in new funding earlier this year. Part of the money got approved when Congress passed a temporary budget at the end of last month but it won’t go to pay back any Ebola funds.

Taylor said all of the projects being funded can fight not only Zika, but a range of mosquito-borne diseases including malaria and yellow fever, as well as dengue fever and chikungunya.

“Mosquitoes are pretty small and they are pretty light so you can pack a lot of punch in these small devices,” Taylor said. “That drone can then go back and reload.”

Delaware-based WeRobotics will work with United Nations agencies to deliver the sterile mosquitoes. Michigan-based Vayu is working on drones that can deliver medical supplies or ferry lab samples to and from remote regions.

Other projects getting USAID funding include a group making sandals impregnated with mosquito repellent that protect vulnerable feet and ankles for months; groups working to infect mosquitoes with bacteria called Wolbachia that make them sterile; and a team at Johns Hopkins University making natural insecticides out of soil bacteria.

Taylor said the agency got overwhelming response when it sent out a call for new ideas.

“In two months, we ended up getting 900 ideas,” she said.

A group called BluSense is working to develop a one-drop blood test that can show on the spot if someone’s infected with Zika, or with one of its close relatives such as dengue or chikungunya.

It’s tricky to test someone for Zika infection and people who think they may be infected say they sometimes have to wait weeks for results. Having a quick test that can be used in the field would greatly improve efforts to study and fight Zika.

Zika has spread across much of Latin America and the Caribbean, and it’s caused outbreaks in south Florida.

The Florida department of health reports more than 1,000 cases of Zika. Most have been carried in by travelers but 172 people have been infected in Florida, presumably by Aedes mosquitoes that live there. Travelers infected with Zika can infect other people sexually and if they are bitten by Aedes mosquitoes when they get back home, those mosquitoes can infect more people.

Zika Research Could Show Disease Impact On Children Beyond Infancy (McClatchy)

By Jessica Campisi

McClatchy, October 12, 2016

Research has shown that toddlers and adults – as well as fetuses and infants – could face developmental effects after contracting Zika, and scientists are trying to find out why.

After months of controversy among lawmakers, Congress passed a bill late last month to fund Zika relief efforts, and the virus has continued to spread in countries including the U.S. and Brazil, which is gearing up for its next mosquito season.

Meanwhile, scientists are investigating the dangers of Zika outside the womb.

This summer, the New England Journal of Medicine published a report highlighting a child in Sao Paulo, Brazil, who was infected with Zika for at least 67 days after he was born, allowing scientists to take a closer look at the virus and its impacts on both fetuses and young children.

“It’s well known that there are certain viruses that cause problems in the fetal brain,” said Dr. Deborah Levine, a radiology professor at Harvard Medical School. “But the brain continues to develop after birth, and we don’t know the other (impacts) yet.”

Levine helped write a separate study that showed that babies with Zika can face severe brain damages "that basically mean no normal outcome," even after they've been born and continue to grow, she said. Even if symptoms are not apparent at first, children are at risk of permanent physical, mental and cognitive effects.

Brain development occurs until a child is about 3 years old, according to the Urban Child Institute. And while a fetus is prone to more serious harm from Zika, it is unknown whether similar developmental problems could also occur in a child bitten by a virus-carrying mosquito, Levine said.

During a pregnancy in which Zika is present, Levine said, most of the fetuses observed showed "unusual" instances of calcium buildup and a loss of white matter in the brain, disrupting development. After this fluid builds up, it decompresses, typically leading to brain folding and an abnormally small head.

As a result, babies infected with Zika could face several developmental issues aside from microcephaly – a typical indicator of the virus – such as potential blindness, deafness and an inability to move normally, Levine said.

"You need the brain for just about everything," Levine said. "There's a huge amount of concern for how babies develop and what they'll be able to do."

And a study published Aug. 18 that was conducted in part by the La Jolla Institute of Allergy and Immunology revealed it's not just kids who could be at risk, after results found Zika affected the brains of adult mice.

"It shifted the focus from fetuses to adults, and also children whose brains are still developing," said Sujan Shresta, a professor at the La Jolla Institute of Allergy and Immunology who's a co-author of the study. "We're trying to suggest that this is one more aspect and that we should pay attention to children and adults, too."

Specifically, she said, the implications Zika has for toddlers and children are "more devastating," as it affects their memories and ability to learn. In adults, Zika may cause depression or Alzheimer's disease, according to the study.

A Centers for Disease Control and Prevention report published Sept. 30 found that Zika is typically mild when contracted by children. But, the report warned, doctors should watch for more serious complications.

At the state and local levels, the response to Zika has been centered on identifying and monitoring cases brought in to the U.S. by travelers, running lab tests, getting rid of infected mosquitoes and educating the public, Scott Briscoe, senior communications director for the Association of State and Territorial Health Officials, wrote in an email. There is no vaccine yet, but the National Institutes of Health has entered the first phase of clinical trials for an investigational vaccine.

"We're putting a lot of effort into decreasing the mosquito population," Levine said. "We have enough information, but do we have enough money? . . . I would love it if there was more" to address these issues.

In Florida – which had 812 cases of Zika as of last week, according to the CDC – the Department of Health is conducting active investigations, door-to-door outreach and targeted testing, according to its website. Also aiding in the effort are researchers at University of Miami Miller School of Medicine, who are trying to find a vaccine and control the budding mosquito population.

In its last week in session in September, Congress voted to support a bill appropriating $1.1 billion in funding to address Zika in the United States. Lawmakers had spent months wrestling over the details of the bill, such as provisions that would have kept Puerto Rico Planned Parenthood clinics from getting federal money. Republicans agreed to provide the money without this additional measure.

Florida, New York and Puerto Rico will receive a large portion of these funds, which will aim at protecting more people, but especially pregnant women and children, against the virus.

Shresta said the next step for researchers was to vary the ages and genders of mice used for testing, as well as to use different strains of mice to represent diversity, and to infect them with different strains of Zika to observe the various responses. They're also investigating the possibility of other bodily fluids besides blood and semen being infectious, she added.

"We just find out more and more terrible and interesting aspects of this virus," Shresta said. "The more we look at this virus, the more we're puzzled."

Using insect repellent is recommended for adults to prevent contraction of Zika, but it shouldn't be used on babies younger than 2 months, according to the CDC. Parents should spray insect repellent onto their hands and then apply it to their children, and babies should instead be dressed in clothing that covers their arms and legs.

While Zika has existed around the world for decades and is not a new infection, Levine said, there remains "a lot of hype and worry," and scientists will continue to investigate the disease and its impacts.

"We're going to continue to follow" this, Levine said. "This is the beginning of a very severe and sad epidemic."

ANALYSIS

- *Colorado:* Lyons Mayor Connie Sullivan said that HUD and the FBI have both said town employees did not profit from or misuse flood recovery funds. However, the Town Board of Trustees did cancel its contract with Front Range Land Solutions, which was handling state and federal buyout grants for Lyons, including FEMA HMGP funds. The town council has also launched an internal investigation of its flood recovery contracting, and two town employees remain suspended. Sullivan said an earlier audit by DHS was not a cause of the HUD/FBI investigation. … The U.S. Attorney will not prosecute an EPA employee involved in last year's Gold King Mine disaster, but will instead leave any administrative action up to the EPA. House Republicans demanded an explanation from the Justice Department… A bomb was left outside the police department in Nederland. The FBI is investigating… Weld County Commissioners are being questioned over an emergency management training exercise held in Breckenridge. The training was similar to one the county had through FEMA in 2012, which they said helped their response to the 2013 flood. …
- *Montana:* October 19 will be Shakeout Day in Montana, and 98,000 people have already registered for the event. Helena will have a meeting the same day to discuss its predisaster mitigation plan, which helps keep it eligible for potential FEMA funding in case of a disaster… A strong storm is expected late Thursday through Friday… The USDA has declared 11 Montana counties a drought disaster area… The Red Cross is offering free smoke alarms in Great Falls as part of Fire Prevention Week and its national campaign to reduce fire deaths.
- *North Dakota:* The state received a grant from the Department of Transportation to help train personnel to respond to emergency situations involving hazardous materials.
- *South Dakota:* No FEMA-related stories
- *Utah:* A TV station reports on the Red Cross campaign to reduce fire deaths, and on what is needed in a 72-hour kit for disasters.
- *Wyoming:* Park County will get funds from the NRCS to rehabilitate burned areas, and it will also get an unspecified $40,000 Homeland Security grant… Park County and eight contiguous Wyoming and Montana counties have been designated by the USDA as drought disaster areas.
- *Other FEMA-related stories:* A weather forecaster explains why hurricane warnings cannot be manipulated… A *Government Executive* story details the 10,000 federal employees sent to work on Hurricane Matthew by agency… Two Zika stories: NBC News reports on innovate ways to combat the virus, from drones dropping sterile mosquitos in remote areas to mosquito repellant-infused sandals. Researchers report that Zika also poses a threat after birth, including to adults.

COLORADO:

Lyons Mayor: FBI, HUD Find Town Didn't Misuse Flood-recovery Funds (Boulder Daily Camera)

By Amelia Arvesen

Boulder (CO) Daily Camera, October 12, 2016

Lyons Mayor Connie Sullivan issued a statement Wednesday afternoon that the FBI and U.S. Department of Housing and Urban Development found that town staff did not personally benefit from the procurement of contracting with Front Range Land Solutions and funds were not misused.

However, the board agreed in a resolution Monday to terminate all contracts with the company owned by Rosi Dennett, who coordinated state-funded and federal-funded buyout services for Lyons residents starting in October 2014, following a devastating flood one year earlier.

"We didn't cancel it because we thought she did anything wrong," Sullivan said. "We thought she did a nice job and we think the town benefitted from her work."

The statement from Sullivan, on behalf of the Town Board of Trustees, said that HUD does not intend to gather additional information from Lyons, and all original documents taken during last week's probe were returned.

She said the HUD investigation is not complete, because there might be additional administrative work required to close the file.

HUD Office of Inspector General spokesman Darryl Madden, based in Washington, D.C., previously said the office's role is to ensure grants given to communities after disasters are being used appropriately, but beyond that he could not comment on the mayor's most recent statement.

"We're not confirming or denying that an investigation even exists," he said in response to the statement released Wednesday.

Documents specified in the subpoena made public by the town on Friday include "All documents pertaining to negotiations between Front Range Land Solutions and the Town of Lyons."

It also sought all "emails, letters and other correspondence and memoranda" concerning representatives of Front Range Land Solutions, as well as invoices, bills, receipts and other documents reflecting "charges or payment with respect to Front Range Land Solutions and/or Rosi Dennett."

Sullivan also said the few remaining buyouts the town is still trying to close are now being handled by Christy Crosser, a grant coordinator with the town.

She said the board was not able to temporarily suspend Dennett's services, so their choice was to terminate or continue.

"It was really just a procedural thing; we just didn't want to have any work being done," Sullivan said. " ... The contract did not have a clause for suspending."

Dennett has not answered or returned multiple calls and emails since Friday, when the mayor first released the subpoena served by federal authorities naming her company.

The Times-Call submitted a Colorado Open Records Act request Monday, asking for copies of previous and current contracts the Town of Lyons has with Front Range Land Solutions and/or Dennett, as well as any emails with people associated with that company and/or the company owner.

Sullivan said in Friday's statement that the FBI was not proceeding with a federal case.

She said in her Wednesday statement that the board plans to start an "internal review of the circumstances that prompted the external investigation" and "intends to complete this review as quickly and as efficiently as possible."

"The internal review will focus on the documentation processes and related circumstances surrounding contract procurement so that any needed corrective actions can be identified and implemented by the Board," she said in the statement.

Town Administrator Victoria Simonsen and Town Clerk Debra Anthony remain on leave until the board's process is complete.

Additional documents sought by the federal subpoena included all of Lyons' documents relating to the procurement processes and correspondence concerning the Community Development Block Grant Disaster Recovery Program and the Hazardous Mitigation Grant Program.

The subpoena also asked for all documents relating to the award of federal recovery grants to Front Range Land Solutions.

Sullivan said Dennett's contract to date has totaled about $350,000. She said she did not have figures on hand for how much Federal Emergency Management Agency and Community Development Block Grant Disaster Recovery funds Dennett handled.

Additionally, Sullivan said a report issued by the U.S. Department of Homeland Security Office of Inspector General in April was not causal to the investigation, and the investigation did not involve how grant funds for large flood-recovery projects were procured or managed.

FEDS will not prosecute EPA official linked to Gold King Mine disaster (The Denver Post)

The U.S. Attorney in Denver will not prosecute an Environmental Protection Agency employee involved in the Gold King Mine disaster, leaving it to the agency to determine administrative action against the employee.

A decision made Oct. 6 was based on information submitted by the EPA's Office of Inspector General to federal prosecutors after a year-long internal probe.

Instead of a criminal prosecution, the EPA's internal investigators "will submit a report of an investigation to the agency that details the findings of our investigation," OIG spokesman Jeff Lagda said in response to queries.

"The agency, not the OIG, will then determine what administrative action they may take against the employee based on that report," Lagda said. "The EPA will have to report to the OIG what administrative action the EPA will undertake."

The EPA's quasi-independent OIG launched an investigation into the Gold King disaster more than a year ago. Federal officials later, driven by members of Congress, began a criminal probe.

The Aug. 5, 2015, blowout at the Gold King Mine above Silverton in southwestern Colorado — accidentally triggered by an EPA-run team led by on-scene coordinator Hays Griswold — fouled waterways in three states and on American Indian lands. An estimated 3 million gallons of acid mine drainage containing heavy metals including arsenic, cadmium, lead, and mercury spilled into Animas River headwaters and turned the Animas mustard-yellow.

The OIG is part of the EPA and investigates agency activities.

The OIG investigators "presented facts to the U.S. Attorney's Office" in Denver "about whether an EPA employee may have violated" the Clean Water Act and the statute prohibiting false statements, according to a statement Lagda issued Wednesday afternoon.

Acting U.S. Attorney Bob Troyer could not be reached, and spokesman Jeff Dorschner declined to comment.

"It has been a long-standing policy that the U.S. Attorney's Office does not discuss declinations," Dorschner said.

EPA investigators now will return to completing work requested by Congress related to the Gold King Mine spill, Lagda said.

Sens. John McCain of Arizona and John Barrasso of Wyoming, members of the Senate Committee on Indian Affairs, in May sent a letter to Attorney General Loretta Lynch urging a criminal probe.

Other federal agencies also have reviewed EPA conduct linked to the Gold King Mine. An Interior Department report issued last fall deemed the Gold King disaster preventable, the result of errors over many years in handling toxic discharges from inactive mines.

House Republicans on Wednesday bristled and demanded a briefing before Oct. 26 by the Justice Department explaining the decision not to prosecute.

“By not taking up the case, the Department of Justice looks like it is going easy on its colleagues in EPA,” said a letter from members of the House Committee on Natural Resources.

Justice officials’ actions “give the appearance of hypocrisy, and seem to indicate that there is one set of rules for private citizens and another for the federal government,” the letter said. “The EPA disaster deserves the same level of accountability to which private citizens are held.”

FBI probes motive after bomb left at Colorado police station (The Denver Post)

NEDERLAND — The FBI is trying to determine why someone left an explosive device in a backpack in front of the police department of a small Colorado mountain town, prompting evacuations in the community’s main retail area.

A Nederland police detective found the bag outside the building when he began his shift Tuesday morning and brought it inside because he thought it was lost property. He opened it and found “suspicious articles” that were later determined to be an improvised explosive device, police Marshal Paul Carrill said.

The FBI, which had assumed control of the investigation by Wednesday afternoon, said the device was active but failed to detonate. Two robots searched the backpack, and multiple pieces were removed from the device and sent to a forensics lab.

“It’s difficult to interpret why someone would do this,” said Carrill, who declined to disclose if police have identified the backpack’s owner. “It is my hope and intent, for the health and safety of the community to get to the bottom of why.”

The police department is in the town’s main retail center, which includes a grocery store and multiple shops.

Carrill urged the public to come forward with information because “the individual or individuals who may have assembled this could be a risk to their neighbors.”

Nederland is about 15 miles southwest of Boulder.

Weld County officials drawing criticism for emergency management training in Breckenridge (Complete Colorado)

October 12, 2016 5:04 PM· **By Sherrie Peif**

Editors Note: This is the third story in a series of stories about the board of Weld County Commissioners and issues brought to the Weld County Council for reasons to audit the board's performance. The previous two look at the commissioner's decision to form a charter review committee and the criticisms leveled at the commissioners by residents. Next up, Complete Colorado will look at spending by the commissioners on conferences, meals and travel and potential improprieties.

GREELEY – Many praised the board of Weld County Commissioners both during and after the 2013 flood because their actions saved time, money, and in some cases, headaches for Weld residents.

However, how much the county should pay to train its employees for just such an event recently came under fire. Also who could help pay the bill was questioned. So, rather than accept direct donations from corporate partners, the county directed those entities to donate to the United Way, who would then turn around and cut a check to the county.

At several recent meetings of both the board of Weld County Commissioners and the Weld County Council, residents have said a recent training trip to Breckenridge was too much and accused the commissioners of using United Way to launder donations from organizations that depend on the commissioners for decisions on land use in the county.

Commissioners say the county's response in 2013 was the result of ongoing training, including a 2012 trip to Emmetsburg, Md. for specialized training provided and paid for by FEMA.

Commissioners were so pleased by the hands-on experiences employees got that they decided to replicate it on their own this year when a subsequent grant application was unsuccessful.

In August, 41 county employees and 20 other emergency responders from other organizations spent four days in Breckenridge training for an emergency.

However, some – including one of the commissioners – said the training could have taken place for much less than the $45,000 the Breckenridge location cost.

"We budgeted this for $15,000," said Commissioner Sean Conway at a July 18 regular board meeting. "The taxpayers paid a lot of money for (Weld's Emergency Operations Center) for when a disaster's going to happen."

According to the Office of Emergency Management's (OEM) website, the final ticket price was $41,455.

Through a Colorado Open Records Act request, Complete Colorado also found another nearly $4,000 in expenses for employee transportation and meals, making the grand total more than $45,000. Some employees on the attendance list had not yet submitted expense reports at the time of the request.

The reason given for going to Breckenridge was to keep people from straying too far from the event.

“One of the biggest concerns I have about doing this training and investing in it is people coming and going and saying, ‘well I have this other meeting scheduled,’” Commissioner Julie Cozad said at that July meeting. “It just takes away from the overall training. I think it’s really important that the people that do go, are there, and they’re focused, and they’re working on the training together for the full entire time.”

Commissioner Barbara Kirkmeyer told the Greeley Tribune something similar.

“If it’s too close, people will just pop out for some reason or another,” the Tribune article reported. “Maybe they’d go home for lunch or go run an errand. They can’t leave meetings for their own offices when they’re more than two hours away from them.”

However, both Kirkmeyer and Commissioner Steve Moreno left the conference early.

Moreno left to attend a national clerk and recorder’s conference in Philadelphia.

When questioned if it was appropriate to leave the training for the clerk’s conference considering he is no longer the clerk and recorder in Weld County, Moreno said the Election Center board believes his perspective as a commissioner is a valuable resource.

“I was first asked to serve on the Board of Directors for the Election Center in 2012 when I was still Weld County Clerk & Recorder,” Moreno said. “I was going to resign when I was elected Weld County Commissioner, but the Chairman and members of the Board asked if I would consider continuing my service in my capacity as a county commissioner on their board. … They felt my insight to the board from the position of commissioner, who oversees county budgets including elections, could be beneficial to the group.”

Moreno is also currently hearing criticism that he supports changing the clerk and recorder position from an elected one to an appointed one, so that he can get his old job back.

Moreno was term limited from the position in 2014. Moreno has denied that and said publicly he will not support that change.

Kirkmeyer left to attend an award’s banquet in Fort Collins. She said she believed it was important to represent Weld County on the North I-25 Coalition, which was receiving the award.

“I think it is appropriate for an elected official to represent the organizations to which they belong, especially when being recognized for their positive work on a project crucial not only to Weld County but the Northern Colorado region as well,” Kirkmeyer said.

She also said she believed her prior experience in emergency management helped during her missing time.

“I not only attended the FEMA training with the county in 2012, but I also had direct experience with disasters and disaster recovery during my role as acting director of the Office of Emergency Management at (Department of Local Affairs),” Kirkmeyer said. “My role in the training was not so much as that of student new to the world of EOCs and disasters but as a contributing mentor and facilitator for the training and the exercise.”

She pointed out that she didn’t miss any of the actual training exercises and was briefed on what she did miss over lunch.

Commissioner Conway, who attended the same awards ceremony in Fort Collins, did not attend the Breckenridge training out of principal, he said.

“I did not attend the exercise because I felt the exercise should have been conducted in the Weld County EOC, which we constructed at great taxpayer expense in 2011,” Conway said. “The 2016 Budget allocated $15,000 to do an exercise. The decision to move the exercise from Weld County to Breckenridge resort resulted in tens of thousands dollars of additional taxpayer expense, which I believed was unnecessary. The four days of the exercise, I remained in Weld County to hold down the fort at the commissioner’s office while my four fellow commissioners were at the exercise.”

Corporate donations processed through United Way

The debate over where and how much, is just one concern for residents who have spoken repeatedly against it. Who paid for the training and how has also been a matter of concern.

“I would also raise the question in terms of some of the sponsorships I’ve seen,” Conway said at that July meeting. “I think we need to be very careful in terms of what financial sponsorships we have in regards to this and in regards to conflict of interest.”

Conway was referring to what the county has said was $11,500 in sponsorships for the event that came from companies such as Xcel Energy, BASE Tactical, Waste Management, PDC Energy, TetraTech, Martin Marietta and Felsburg Holt & Ullevig, all companies that at some point have come before the board for quasi-judicial hearings on land use and other issues and are likely to again. Those hearings require commissioners to be judge-like in their fact findings.

Somewhere between the July meeting and the training, Weld County Attorney Bruce Barker weighed in on the matter because in a letter also obtained through open records, OEM Director Roy Rudisill asked those partners to reissue their donations to the United Way instead of the county.

MONTANA:

Oct. 19 events focus on natural disasters and how to survive them- Helena Independent Record

AL KNAUBER Independent Record October 12, 2016

Wednesday’s meeting to talk about what can be done to reduce the effect of disasters couldn’t be timelier.

The Oct. 19 event at 3 p.m. in the lower level of the Law Enforcement Center is part of the five-year update of the county’s pre-disaster mitigation plan.

It comes on the same day as the 10:19 a.m. statewide earthquake drill.

Those who attend the pre-disaster mitigation plan meeting are invited to bring local knowledge and ideas on how to mitigate the effects of hazards.

“The (pre-disaster mitigation) plan will reexamine the wide range of hazards that affect Lewis and Clark County, recent hazard events, the probability of future occurrences, and the vulnerabilities of structures and the population. From that risk assessment, a plan of action to mitigate these hazards will be developed and/or updated,” Daphne Digrindakis, senior project manager with Tetra Tech Inc., which has been hired by the county to assist in updating the plan, wrote in an email.

The update is also required for the county to apply to the Federal Emergency Management Agency for funds to offset the damage from disasters.

FEMA funding was used by the county this year to help lease the Helena Trap Club gravel pit for use in a flood emergency to divert some of the water there temporarily.

Wildfire and flooding will be discussed and how the impact of these events can be reduced, according to a news release.

Earthquakes, another of the natural disasters that has happened in Lewis and Clark County and Helena, will also be a topic for discussion.

The Oct. 18, 1935, earthquake damaged much of Helena and was the worst of a seven-month series of quakes that lasted from October 1935 into April 1936, said Paul Spengler, the county’s disaster and emergency services response coordinator.

The statewide annual earthquake drill, Spengler said, will last a few minutes.

Last year more than 160,000 participated in The Great Montana Shakeout, according to the program’s website, where people can register to be included in this year’s event.

As of Wednesday more than 98,000 people were registered, the website noted.

Those who participate in the drill will seek shelter inside their buildings as they would while waiting for the ground to cease shaking from an actual earthquake, Spengler said.

After that wait, when there is less danger of building facades collapsing into streets, people will exit their buildings and assemble in pre-determined locations to be tallied, Spengler explained.

This tally would allow people to know if anyone was trapped inside a building by an earthquake.

The Shakeout, he added, is a way to keep the memory alive and prepare for the day when another earthquake occurs.

While clearing brush and trees from around homes is one of the pre-disaster mitigation steps that can be taken for those who live in areas that could be burned by wildfire, removing heavy items from high shelving in homes is also a means to reduce the potential threat to life from earthquakes, Spengler noted

Storm system could bring potential for rockslides- KECI TV Missoula

By: Barrett Tryon
Updated: Oct 13, 2016 07:24 AM MDT
MISSOULA, Mont. - Weather could have a big impact on your travel plans late Thursday through Friday in northwest Montana.

The Severe Weather Alert team is tracking a strong storm that just moved through the Seattle area — and is headed our way.

With the risk of severe weather, rockslides could be a problem in places like Lookout Pass, where Interstate 90 crosses the state line into Idaho.

Drivers should also be prepared for possible ponding on roadways and the potential for hydroplaning.

USDA AG disaster declared in county- Chouteau Acantha News

By Nancy Thornton Acantha reporter -15 hrs ago

The U.S. Department of Agriculture on Oct. 5 designated Teton County and 10 other counties in Montana as primary natural disaster designations because of a recent drought. Those counties are Big Horn, Carbon, Flathead, Granite, Lewis and Clark, Missoula, Park, Powell, Stillwater, Sweet Grass and Teton counties.

Farmers and ranchers in 20 other counties in Montana also qualified for natural disaster assistance because their counties are contiguous. Those counties include Cascade, Chouteau, Glacier and Pondera counties, among others.

All qualified farm operators in the designated areas are now eligible for low interest emergency loans from USDA’s Farm Service Agency provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses.

FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the emergency loan program, to help eligible farmers recover from adversity, a USDA press release said.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program, Livestock Forage Disaster Program, Livestock Indemnity Program, Emergency Assistance for Livestock, Honeybees and Farm-Raised Fish Program and the Tree Assistance Program.

Interested farmers may contact the local USDA Service Center in Choteau for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online at http://disaster.fsa.usda.gov.

Free smoke alarms for fire prevention month in Great Falls- Great Falls Tribune

Jenn Rowell, jrowell@greatfallstribune.com 5:49 p.m. MDT October 11, 2016

This week is National Fire Prevention Week and free smoke alarms are available to Great Falls residents through the Montana Red Cross later this month.

On Oct. 21, volunteers through the Red Cross, Great Falls Fire/Rescue, Malmstrom Air Force Base, PayneWest Insurance and Cascade County United Way will be installing free smoke alarms in homes without them and teaching about home fire safety.

Great Falls residents can sign up to have up to three free smoke alarms installed by calling the Red Cross at 800-272-6668 before Oct. 21.

The event is part of an ongoing nationwide Red Cross campaign to reduce death and injuries from home fires by as much as 25 percent in five years.

“While we were able to install over 270 alarms in Great Falls last year, we know there are homes that still need them,” said Diane Wright, executive director of Montana Red Cross.

Smoke alarms should be replaced every 10 years, according to the National Fire Protection Association.

In addition to installing the smoke alarms, volunteers will also share information about fire safety, including how to draft a fire escape plan, Wright said. The visits take about 20 minutes and the Great Falls event will install at least 100 free smoke alarms, Wright said.

To learn more about fire safety, visit redcross.org/homefires.

NORTH DAKOTA:

ND receives federal hazardous materials safety funds (The Bakken)

By Patrick C. Miller | October 12, 2016

The U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) announced that North Dakota will receive $194,331 in funds to aid personnel responding to hazardous material-related emergencies.

PHMSA is issuing $20.4 million in Hazardous Materials Emergency Preparedness (HMEP) grants to states, territories and Native American tribes to enhance their ability to respond to hazardous materials transportation incidents.

Texas and California will get $1.5 million each. The states receiving a half million dollars or more are Alabama, Florida, Illinois, Louisiana, Michigan, New York, Ohio and Pennsylvania. No tribes in the Dakotas received funding.

“The department’s partnership with our states, territories and tribes is an integral component of our strong national safety program,” said Anthony Foxx, U.S. transportation secretary. “These grants are important tools for communities to plan and stay prepared for transportation incidents involving hazardous materials, including those involving high-hazard flammable trains.”

The HMEP grant program is part of DOT’s comprehensive approach to improving the safe transportation of crude oil and other hazardous material across the country. PHMSA’s HMEP grants program allows recipients to design and implement planning and training programs according to their specific needs.

“Our nation’s emergency responders have an immensely challenging job, and this grant funding supports their efforts to protect our communities,” said Marie Therese Dominguez, PHMSA administrator. “PHMSA has taken a comprehensive approach to enhance the safe transportation of energy products that includes prevention, mitigation, and emergency preparedness and response. These grants are another critical element of our focus to improve safety.”

For the current grant cycle, HMEP applicants are encouraged to allocate funding for:

- Developing or revising emergency plans and training activities to account for bulk transportation of energy product by rail and over the road;

- Conducting commodity flow studies to determine the frequency and quantity of hazardous materials shipments being transported through local communities; and

- Training emergency responders to respond appropriately to incidents involving hazardous materials.

UTAH:

How is the Red Cross Working to Reduce House Fire Deaths? Good 4 Utah.com KYVX- TV

Updated 10/12 2016 10:02PM

The Red Cross has committed to an ongoing nationwide campaign to reduce the number of home fire deaths and injuries by 25 percent over the next few years.

As part of Fire Prevention Week, Rich Woodruff from the Utah Red Cross explains why it is so important to have working smoke detectors in your home.

According to the Red Cross, the biggest disaster threat in the United States isn't floods, hurricanes or tornadoes; it's fire. The American Red Cross responds to nearly 70,000 disasters year- one every eight minutes and most are house fires.

Home fires can happen quickly, devastating lives and property. But unlike other disasters, most home fires can be prevented.

For more information about fire safety and how you can help support the Red Cross visit www.redcross.org.

72 Hour Kits: What You Really Need- Good 4 Utah.com

By MICHELLE MONEY | mmoney@good4utah.com
Updated 10/12 2016 11:01AM

Have you ever wondered what you really need in a 72 hour kit? Debbie Kent from Store This Not That has done all the research and work for you.

72 hour kits are geared to help you survive for 3 days after something BIG has happened: earthquake, flooding, hurricane, tornado, EMP, etc. In other words, a disaster where the power is out, your house is likely unsafe (or you would be staying there) or you are at work and need to get home and you are on the move taking your kit with you, hopefully in a car, in worst case scenarios on foot.

Maybe you only have to travel a mile or two to get somewhere safe or maybe you have to travel a long distance, either way the hope is your kit can carry you through until you arrive safely. These kinds of survival bags usually contain the bare bones of survival, keeping them somewhat small and lightweight and relying heavily on the skills of the person carrying them. Their contents include items for: first aid, fire starting, simple tools and shelter, food and food procurement, water and filtering, light, personal items and safety.

Visit StoreThisNotThat.com for more resources.

WYOMING:

Funds to be used for burned-out areas from summer fires – Cody Enterprise

By SCOTT KOLB Updated 17 hrs ago

On Oct. 6 the Park County Commissioners voted to approve county sponsorship of a Natural Resources Conservation Service program which provides federal funds for the rehabilitation of land that burned in this summer's wildfires.

The funds would be disbursed under the Emergency Watershed Protection Program from the Conservation Service. This money is usually used for flood control, which could be a problem if the burned-out areas from this summer's fires aren't re-seeded.

"We request Federal assistance ... to restore damages to private lands in Park County sustained by wildfires during the months of August and September," stated the letter signed by the commissioners. "We understand, as sponsors of this program that our responsibilities will include, where applicable, acquiring land rights and any permits needed to construct; and, if required, to operate and maintain the proposed measures."

Commissioner Joe Tilden abstained from the vote due to a potential conflict of interest as he is listed as an employee of the Big Hat Ranch, one of the landowners likely to receive assistance.

"This is the first time this program has been used for wildfires," commissioner Lee Livingston reminded the board. He then suggested entire watershed areas be brought in under the program. The re-seeding will be done not only to prevent erosion, but to prevent invasive cheatgrass from taking over the scorched land.

The letter, approved and signed by the commissioners, will move the process forward. Landowners affected by the fires will be contacted by the county to get into the program.

In other business, bids were taken for the county to purchase two new motor graders. The purchases fall under a buyback program from John Deere in which the company purchases the old graders for essentially the price the county paid for the equipment two years ago.

"With the budget being tight, we really scaled back on what we did with equipment," said Brian Edwards, an engineer for Park County.

The bid went to Honnen Equipment of Mills. With the trade-in value, it will cost the County $43,776 to buy two new graders as well as pay for warranties.

There was $50,000 in the budget to cover the expense, so the purchase came under the projected cost. The vote was unanimous to approve this purchase. The County will stay in the two-year buyback plan and can opt for as long as five years.

Commissioners Bucky Hall and Joe Tilden gave a report on their recent trips to the Wyoming Association of County Officers and Wyoming County Commissioners Association meetings.

In their meeting with the other county commissioners from around the state, Hall and Tilden sat in on discussions about pressing business like insurance costs.

“If all the counties banded together, we would save a lot of money on worker’s compensation going through the WCCA,” Hall said. “This is worth looking into.”

Talks were also held about the role of special districts within a county. This also brought up the contentious subject of mill levies for these special districts, which the commissioners are asked to rubber stamp even if they oppose or would like to modify the measures.

A court case in Johnson County is pending on this issue. The case involves the Johnson County commission, which refused to approve some levies for special districts. That decision not to approve the special district mill levies has been challenged in court.

Tilden had some good news to report. It appears the governor is trying to free up money for the struggling counties to use in meeting their yearly budgets.

“The governor said he will ask for interim funding for the counties,” Tilden said. “He said we have a rainy day fund and it’s pouring on the counties.”

Not only did they discuss business at these meetings, but there was also some quality entertainment. Tilden told the board that they had a good magician at the conference and he put on a fine show.

In other business at the meeting:

•A boundary line adjustment for Ben Johnson was approved in rural Park County.

•Approval was given to allow the board chairman to sign for a Homeland Security grant of $40,000.

•Reviewed and signed three Department of Revenue Notice of Valuation Changes. These dealt with two tax rebates for Marathon Oil and Vanguard Operating, LLC.

•Approved changes to the flood plain permit for the Brown Thomas Meadow bank stabilization project.

• Request approved to hire a new part-time janitor at the courthouse. Failure to approve this request would’ve resulted in future overtime for a salaried employee.

• TANF grant recipients were approved for seven different groups. Big Brothers and Sisters of NW Wyoming, Boys and Girls Club of Park Co., Crisis Intervention Services, Children’s Resource Center, NW College, NW Wyoming Family Planning and Yellowstone Country Assistance Network.

USDA designates Park County in Wyoming as a primary natural disaster area –Northern Wyoming Daily News

October 11, 2016

CASPER — The U.S. Department of Agriculture (USDA) has designated Park County in Wyoming as a primary natural disaster area due to a recent drought.

"Our hearts go out to those Wyoming farmers and ranchers affected by recent natural disasters," said Agriculture Secretary Tom Vilsack. "President Obama and I are committed to ensuring that agriculture remains a bright spot in our nation's economy by sustaining the successes of America's farmers, ranchers, and rural communities through these difficult times. We're also telling Wyoming producers that USDA stands with you and your communities when severe weather and natural disasters threaten to disrupt your livelihood."

Farmers and ranchers in Big Horn, Fremont, Hot Springs, Teton and Washakie counties in Wyoming also qualify for natural disaster assistance because their counties are contiguous.

Farmers and ranchers in Carbon, Gallatin and Park counties in Montana also qualify for natural disaster assistance because their counties are contiguous.

All counties listed above were designated natural disaster areas on Oct. 5, 2016, making all qualified farm operators in the designated areas eligible for low interest emergency (EM) loans from USDA's Farm Service Agency (FSA), provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses. FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the EM loan program, to help eligible farmers recover from adversity.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program; Livestock Forage Disaster Program; Livestock Indemnity Program; Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program; and the Tree Assistance Program. Interested farmers may contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online athttp://disaster.fsa.usda.gov.

FSA news releases are available on FSA's website at www.fsa.usda.gov via the "Newsroom" link.

FEMA-RELATED STORIES:

Weather Forecasters Can't Manipulate Hurricane Warnings — Here's Why (Houston Chronicle)

Houston Chronicle, October 12, 2016

Many mini-dramas develop during major disasters like Hurricane Matthew, which has left a trail of devastation in the Caribbean and the southeastern United States. One such drama occurred outside of the storm zone: Conservative news blogger Matt Drudge accused the federal government last week of hyping the threat to the U.S. coast, purportedly to play up possible links between extreme weather and climate change.

The Twitter universe rightfully jumped on this claim, calling it extremely irresponsible. Some critics invited Drudge to stand on the central Florida coast and witness the passage of Matthew so he could personally verify its strength.

But here is a larger, key point: It would be virtually impossible for our government, or any weather service, to intentionally overhype or downplay the real risks of a major hurricane as it approaches the United States.

I have been involved with operational weather forecasting for nearly 40 years. From 2005 through 2009 I was responsible for typhoon forecasts that the Defense Department's Joint Typhoon Warning Center, or JTWC, issued for the western Pacific and Indian oceans. After retiring from the Navy, I served as chief operating officer for the National Oceanic and Atmospheric Administration. In this position I was responsible for the National Weather Service and its components, including the National Hurricane Center, or NHC.

During my career I have seen the internet and social media transform weather forecasting in general, and hurricane forecasting in particular, from a skill that was seen and practiced by a small community of specialists into one of the most transparent technical endeavors we do on a routine basis. Every forecaster I have ever worked with – military or civilian – wants to get predictions right. And even if they wanted to shade the forecast one way or another to support some agenda, it would be impossible to do it in today's networked world.

In the pre-internet era, hurricane forecasting was more of an art than a science. Modern weather forecasting developed in the 1960s with the advent of radar, computers and satellites. Well into the 1980s, forecasters were still working out how best to integrate satellite data into computer-based forecasts, and both satellite measurements and computing power were crude by today's standards.

Observations and computer prediction models traveled on government-only, proprietary circuits, with only limited access by private forecasters or academia. Government forecasters would share storm track and intensity forecasts with the public, along with short written discussions (TRANSMITTED IN ALL CAPS), but little else. The actual processes for deriving forecasts were closely held, available only to members of a very select and specialized guild. Private-sector forecasting of hurricanes was in its infancy, hampered by a lack of real-time information.

Starting in the 1990s personal computers, dial-up access and then the internet fundamentally changed the way weather information could be accessed and distributed. Today global weather models from the United States, Canada, United Kingdom and the European Centre for Medium Range Weather Forecasting are available to anyone with an internet connection. When the NHC directs U.S. Air Force Reserve personnel or NOAA "Hurricane Hunters" to fly a hurricane reconnaissance mission, the data they collect are posted virtually in real time. Satellite images from the JTWC or NHC forecast are available online free of charge.

For hurricanes, the federal government produces one official forecast from either the NHC for the eastern Pacific and Atlantic oceans or the JTWC for the western Pacific and Indian oceans. This forecast draws on computer-based weather forecast models, an assessment of the storm's real-time characteristics, and the knowledge of a highly trained typhoon duty officer or hurricane specialist. It would be obvious instantaneously if the forecast deviated substantially from observed conditions or from a blend of the computerized forecast guidance without providing some meteorological or physical explanation.

This level of transparency is fairly new. As recently as the early 2000s, there were significant and sometimes emotional debates within the weather forecasting community over how much computer modeling data and information from weather observations should be publicly available in real time. Some forecasters worried (and still do now) that users could misinterpret individual pieces of data or second-guess official forecasts. Over time, however, consensus has grown in favor of making all the data available to anyone interested, so that everyone can see how forecasts are put together.

Now that so much weather data is publicly available, the explosion of social media guarantees that thousands of observers are looking over forecasters' shoulders. And forecasts get a lot of attention, especially when they involve extreme events.

Hundreds of people with varying credentials comment on every tropical storm, hurricane or cluster of thunderstorms. Popular sites like Weather Underground and Windyty further attest to broad public interest in all things meteorological.

If the NHC or JTWC appeared to be disregarding either observations or reliable forecast models without explanation, weather enthusiasts would quickly point this out on social media, and major news media would pick up the story. We don't see this in headlines because it doesn't happen.

With a few days of hindsight, it's clear that the NHC was eye-wateringly accurate in its forecasts of where Matthew would be two days in advance, and pretty good at forecasting the storm's position, three, four, and even five days in advance. NHC initially forecast that the storm would remain east of the U.S. coast in the Bahamas. Gradually the storm track "walked" westwards as the computer forecast guidance trended in that direction. Matthew also traveled close to the coast farther north than initially forecast, producing extreme rainfall in North Carolina (which can be physically linked to a warming climate). This aspect was predicted with impressive precision up to five days in advance.

Weather forecasters understand that they walk on a knife's edge between overwarning on the one hand – which can produce false alarms and complacency – and underwarning on the other, potentially trapping people in life-threatening situations. The NHC, backed by a national and international network of observers, scientists and computer models, did an amazing job on a very dangerous storm. There always are lessons to be learned, but the bottom line is that we owe them thanks and Mr. Drudge owes them an apology.

– David Titley, Pennsylvania State University

Federal Agencies Deploy Thousands Of Feds For Hurricane Matthew Response

(Government Executive)

By Eric Katz

Government Executive, October 12, 2016

Federal agencies have deployed more than 10,000 employees, including nearly 3,000 civilians, to five states and three countries to assist local communities as they recover from the devastation wrought by Hurricane Matthew.

The Federal Emergency Management Agency is spearheading the efforts, establishing survivor assistance, incident management, and search and rescue teams throughout the Carolinas, Georgia and Florida in response to disaster declarations issued by President Obama. FEMA has deployed 1,500 employees in an effort to distribute 6.9 million meals, 4.3 million liters of water, 89,000 blankets and 522 generators to affected regions.

Hundreds of thousands remain without power in North Carolina, where flooding has worsened in recent days. More than 1,000 deaths are attributed to the storm, mostly in Haiti but including at least 38 in the United States. More than a dozen federal agencies and components have joined the response efforts, deploying approximately 11,000 personnel, according to their estimates. Here is a look at what each agency is doing:

Defense Department

The National Guard initially deployed 8,000 guardsmen to prepare for the storm and help in the aftermath, though that number dipped to 6,000 on Wednesday. The citizen soldiers have rescued people and animals, cleared debris and helped combat flooding. More guardsmen were activated as flooding in North Carolina worsened.

The U.S. Northern Command has staffed seven Incident Support Bases in affected states and assisted in deploying resources. The Army Corps of Engineers has sent 100 employees to the hurricane zone to assist with power restoration, coastal damage assessments, emergency operation center activations and dam inspections.

Health and Human Services Department

The U.S. Public Health Service's National Disaster Medical System and HHS' Office of the Assistant Secretary for Preparedness and Response has deployed 570 personnel to assist in medical emergency efforts, with an additional 350 individuals on alert for possible activation. HHS sent a 46-member Disaster Medical Assistance Team to Brevard County, Florida, to assist a hospital in handling the surge in the demand for emergency services.

Interior Department

The National Park Service deployed more than 130 personnel for Matthew response to "coordinate and oversee the assessment and recovery" of affected parks. Ten park units remain closed due to the storm as NPS continues to monitor the damage.

The U.S. Geological Survey organized the largest deployment in its history, posting 393 sensors in 290 locations. Now, 40 crews are collecting them and additional crews are measuring flooding and repairing gauges. USGS is posting all of the data it collects on its website. The Fish and Wildlife Service said 19 wildlife refuges and two fish hatcheries "remain closed until it is safe for staff to return."

Justice Department

Justice has deployed 77 law enforcement personnel to affected states, where a spokesman said they have conducted search and rescue missions along the coasts of North and South Carolina. They remain in the region awaiting additional missions, the spokesman said, and 50 more law enforcement officers and medics are on stand-by for deployment if necessary.

U.S. Agency for International Development

USAID initially deployed Disaster Assistance Response Teams to Jamaica, Haiti and the Bahamas in anticipation of the storm, though the teams have since focused their efforts in just the latter two countries. More than 60 employees are currently deployed, according to a spokesman. USAID initially made $400,000 in aid available to the affected countries, and plans to make more available shortly. It has also sent hygiene kits, plastic sheeting, kitchen sets, blankets, collapsible water containers and water storage units to the region.

"USAID is working with the government of Haiti and local non-governmental organizations to continually assess the damage and ensure life-saving emergency relief reaches people in need, especially in the hard-hit regions along the country's southwest peninsula," said Gayle Smith, the agency's administrator. She added the efforts were expected to benefit 100,000 people.

Transportation Department

The Federal Highway Administration deployed "about a dozen" employees for storm response, including through making damage assessments of roads and bridges. The Federal Motor Carrier Safety Association is issuing necessary emergency waivers and permits, while the Federal Aviation Administration has issued emergency flight restrictions.

Energy Department

Energy has deployed nearly a dozen employees to FEMA's National Response Coordination Center and other regional centers, a spokeswoman said. Energy officials have worked with industry to assist it in restoring power, including by holding daily calls both before and after the storm.

Homeland Security Department

In addition to FEMA's efforts, U.S. Citizenship and Immigration Services has made relief available to those whose "application, petition or immigration status" has been affected by the storm. The Coast Guard has assisted in search and rescue missions and ensured safe commercial vessel navigation. It is also providing disaster relief in Haiti.

Small Business Administration

SBA has made low-interest disaster loans available in North Carolina, and deployed staff to conduct "preliminary damage assessments" in affected regions.

Corporation for National and Community Service

CNCS deployed more than 500 AmeriCorps members to assist with various FEMA, state, local and volunteer organizations' efforts.

Feds To Fund Plans To Take On Zika Virus With Drones (NBC News)

By Maggie Fox

NBC News, October 12, 2016

Two groups that want to deploy drones to fight Zika won support from the federal government Wednesday.

They funding will go to helping them develop drones that could drop off Zika-fighting mosquitoes or ferry lab samples from remote regions.

They join a batch of inventive solutions for fighting Zika and other mosquito-borne diseases being funded by the U.S. Agency for International Development (USAID).

Delaware-based WeRobotics will use seed money from USAID to develop drones that can carry sterile mosquitoes into hard-to-reach zones. Flooding mosquito populations with sterile insects can greatly reduce populations as lovesick bugs waste time and energy mating with barren sweethearts.

"Usually, when you think about fighting Zika you think of trucks driving up and down and fogging streets," said Wendy Taylor, who directs USAID's Center for Accelerating Innovation and Impact.

But there are plenty of places with packed humanity vulnerable to the Zika-carrying Aedes mosquitoes that are also hard to reach. "Mosquitoes are pretty small and they are pretty light so you can pack a lot of punch in these small devices."

"Think about Rio — think about the favelas," Taylor said, describing the haphazard neighborhoods that define parts of Brazil's coastal metropolis.

"It might be easier to use a UAV (unmanned aerial vehicle) instead of driving up and down small, winding streets with a truck."

The idea is to pack the drones with sterile mosquitoes and drop them into mosquito hot zones. Or they could deliver a load to hard-to-reach zones that cannot quite be reached by trucks, larger aircraft or people on foot.

"Those little spots can turn into hot spots that spread," Taylor said.

USAID is using $30 million borrowed from Ebola-fighting efforts to pay for its "Grand Challenge" grants.

The Obama administration pulled the Ebola cash when Congress failed to provide a requested $1.9 billion in new funding earlier this year. Part of the money got approved when Congress passed a temporary budget at the end of last month but it won't go to pay back any Ebola funds.

Taylor said all of the projects being funded can fight not only Zika, but a range of mosquito-borne diseases including malaria and yellow fever, as well as dengue fever and chikungunya.

"Mosquitoes are pretty small and they are pretty light so you can pack a lot of punch in these small devices," Taylor said. "That drone can then go back and reload."

Delaware-based WeRobotics will work with United Nations agencies to deliver the sterile mosquitoes. Michigan-based Vayu is working on drones that can deliver medical supplies or ferry lab samples to and from remote regions.

Other projects getting USAID funding include a group making sandals impregnated with mosquito repellent that protect vulnerable feet and ankles for months; groups working to infect mosquitoes with bacteria called Wolbachia that make them sterile; and a team at Johns Hopkins University making natural insecticides out of soil bacteria.

Taylor said the agency got overwhelming response when it sent out a call for new ideas.

"In two months, we ended up getting 900 ideas," she said.

A group called BluSense is working to develop a one-drop blood test that can show on the spot if someone's infected with Zika, or with one of its close relatives such as dengue or chikungunya.

It's tricky to test someone for Zika infection and people who think they may be infected say they sometimes have to wait weeks for results. Having a quick test that can be used in the field would greatly improve efforts to study and fight Zika.

Zika has spread across much of Latin America and the Caribbean, and it's caused outbreaks in south Florida.

The Florida department of health reports more than 1,000 cases of Zika. Most have been carried in by travelers but 172 people have been infected in Florida, presumably by Aedes mosquitoes that live there. Travelers infected with Zika can infect other people sexually and if they are bitten by Aedes mosquitoes when they get back home, those mosquitoes can infect more people.

Zika Research Could Show Disease Impact On Children Beyond Infancy (McClatchy)

By Jessica Campisi

McClatchy, October 12, 2016

Research has shown that toddlers and adults – as well as fetuses and infants – could face developmental effects after contracting Zika, and scientists are trying to find out why.

After months of controversy among lawmakers, Congress passed a bill late last month to fund Zika relief efforts, and the virus has continued to spread in countries including the U.S. and Brazil, which is gearing up for its next mosquito season.

Meanwhile, scientists are investigating the dangers of Zika outside the womb.

This summer, the New England Journal of Medicine published a report highlighting a child in Sao Paulo, Brazil, who was infected with Zika for at least 67 days after he was born, allowing scientists to take a closer look at the virus and its impacts on both fetuses and young children.

"It's well known that there are certain viruses that cause problems in the fetal brain," said Dr. Deborah Levine, a radiology professor at Harvard Medical School. "But the brain continues to develop after birth, and we don't know the other (impacts) yet."

Levine helped write a separate study that showed that babies with Zika can face severe brain damages "that basically mean no normal outcome," even after they've been born and continue to grow, she said. Even if symptoms are not apparent at first, children are at risk of permanent physical, mental and cognitive effects.

Brain development occurs until a child is about 3 years old, according to the Urban Child Institute. And while a fetus is prone to more serious harm from Zika, it is unknown whether similar developmental problems could also occur in a child bitten by a virus-carrying mosquito, Levine said.

During a pregnancy in which Zika is present, Levine said, most of the fetuses observed showed "unusual" instances of calcium buildup and a loss of white matter in the brain, disrupting development.

After this fluid builds up, it decompresses, typically leading to brain folding and an abnormally small head.

As a result, babies infected with Zika could face several developmental issues aside from microcephaly – a typical indicator of the virus – such as potential blindness, deafness and an inability to move normally, Levine said.

"You need the brain for just about everything," Levine said. "There's a huge amount of concern for how babies develop and what they'll be able to do."

And a study published Aug. 18 that was conducted in part by the La Jolla Institute of Allergy and Immunology revealed it's not just kids who could be at risk, after results found Zika affected the brains of adult mice.

"It shifted the focus from fetuses to adults, and also children whose brains are still developing," said Sujan Shresta, a professor at the La Jolla Institute of Allergy and Immunology who's a co-author of the study. "We're trying to suggest that this is one more aspect and that we should pay attention to children and adults, too."

Specifically, she said, the implications Zika has for toddlers and children are "more devastating," as it affects their memories and ability to learn. In adults, Zika may cause depression or Alzheimer's disease, according to the study.

A Centers for Disease Control and Prevention report published Sept. 30 found that Zika is typically mild when contracted by children. But, the report warned, doctors should watch for more serious complications.

At the state and local levels, the response to Zika has been centered on identifying and monitoring cases brought in to the U.S. by travelers, running lab tests, getting rid of infected mosquitoes and educating the public, Scott Briscoe, senior communications director for the Association of State and Territorial Health Officials, wrote in an email. There is no vaccine yet, but the National Institutes of Health has entered the first phase of clinical trials for an investigational vaccine.

"We're putting a lot of effort into decreasing the mosquito population," Levine said. "We have enough information, but do we have enough money? . . . I would love it if there was more" to address these issues.

In Florida – which had 812 cases of Zika as of last week, according to the CDC – the Department of Health is conducting active investigations, door-to-door outreach and targeted testing, according to its website. Also aiding in the effort are researchers at University of Miami Miller School of Medicine, who are trying to find a vaccine and control the budding mosquito population.

In its last week in session in September, Congress voted to support a bill appropriating $1.1 billion in funding to address Zika in the United States. Lawmakers had spent months wrestling over the details of the bill, such as provisions that would have kept Puerto Rico Planned Parenthood clinics from getting federal money. Republicans agreed to provide the money without this additional measure.

Florida, New York and Puerto Rico will receive a large portion of these funds, which will aim at protecting more people, but especially pregnant women and children, against the virus.

Shresta said the next step for researchers was to vary the ages and genders of mice used for testing, as well as to use different strains of mice to represent diversity, and to infect them with different strains of Zika to observe the various responses. They're also investigating the possibility of other bodily fluids besides blood and semen being infectious, she added.

"We just find out more and more terrible and interesting aspects of this virus," Shresta said. "The more we look at this virus, the more we're puzzled."

Using insect repellent is recommended for adults to prevent contraction of Zika, but it shouldn't be used on babies younger than 2 months, according to the CDC. Parents should spray insect repellent onto their hands and then apply it to their children, and babies should instead be dressed in clothing that covers their arms and legs.

While Zika has existed around the world for decades and is not a new infection, Levine said, there remains “a lot of hype and worry,” and scientists will continue to investigate the disease and its impacts.

“We’re going to continue to follow” this, Levine said. “This is the beginning of a very severe and sad epidemic.”

Black Forest fire recovery leaders think about next time

By: Ellie Mulder Colorado Springs Gazette
August 13, 2016 Updated: August 13, 2016 at 9:32 pm
About 480 were destroyed, but at this point, "it's slowed down a lot. I don't think we're going to see more than what we have now," said Kenneth Clark, forest director for Black Forest Together.

The nonprofit organization, which has been a resource for those recovering after the fire, is looking to the future.

"It doesn't make any sense to clean up the black sticks if you're not trying to prevent another (fire)," Clark said. "The disaster showed us what's going to happen - it gives you a preview of what can happen at any time."

And Eddie Bracken, co-founder of Black Forest Together, said, "It's not a question of if, but when the next fire will come."

Near the organization's booth at the Black Forest Festival Saturday, Bracken and Clark discussed the progress that's been made since the fire and what more there is to be done.

Until 2016, all of the organization's work projects were completed for free, Clark said. Now, volunteers continue to complete mitigation and cleanup work for a small fee.

Education efforts occur in part to demonstrate the importance of continued mitigation and maintenance, Clark said. There is also a sense that after three years, people in the Colorado Springs area have begun to forget about the Black Forest fire.

"What we need people to understand is that there's still a lot of work to be done, and people in Colorado Springs specifically have become somewhat complacent with, 'The fire happened, it's over, it's fine,'" Clark said. "We get hundreds, if not thousands of volunteers from all over the country, but we're not getting them from home, and we need volunteers here to help us with the projects."

But the work continues. In 2014, the organization gave away about 10,000 seedlings for reforestation efforts, followed by between 6,000 and 7,000 in both 2015 and 2016, Bracken said.

And in 2014 and 2015, the organization completed over 180 work projects, including cleaning up burned land, reforestation, erosion control and green forest mitigation.

"There's a responsibility that you have to the forest to keep it mitigated, to your own home and to other people's homes that are adjacent," Bracken said.

For more information about Black Forest Together, visit blackforesttogether.org.

MONTANA:

New book recounts 1959 Yellowstone-area earthquake

CLAIR JOHNSON For the Star-Tribune

A powerful earthquake that struck the Hebgen Lake area near Yellowstone National Park in 1959 also left a powerful mark on a 7-year-old boy who was asleep in his Idaho Falls home.

Historian and author Larry E. Morris said he didn’t wake up. “My mom certainly did. I think a jar fell and broke,” he said.

The 7.5 magnitude earthquake killed 28 people, including an Idaho Falls family of five who was believed to have been entombed by a massive, quake-triggered landslide that buried a campground and plugged the Madison River about 9½ miles downstream from the Hebgen Lake Dam.

The slide took less than a minute and brought down more than 80 million tons of rock into the river, forming what became Earthquake Lake. At the time, the earthquake was the second-strongest in the lower 48 states in the 20th century, said the Forest Service, which operates the Earthquake Lake Visitor Center.

“It made quite an impression on me from the start,” Morris said.

Morris, who lives in Salt Lake City, is the author of a book released in July and titled, “The 1959 Yellowstone Earthquake,” published by Arcadia Publishing and The History Press.

The book tells the story of the earthquake with a focus on the victims and survivors and those who responded to the emergency.

The book also features a foreword by Lee Whittlesey, Yellowstone National Park historian.

Morris said his parents took him and his siblings to the memorial site on top of the landslide in the early 1960s, before the visitors center was built, heard a Forest Service ranger talk about the earthquake and toured the area.

"All those dead trees and Earthquake Lake. And one cabin tilted squeewampus. But that plaque with the names on it and how the folks were buried there made a powerful impression on me," Morris said.

Morris has been captivated by the story ever since and has taken his own family to the site.

"It was a natural subject for a book. I find the story so compelling," Morris said.

Morris initially began research for a book in 1990 but became sidetracked by other projects and put the earthquake story aside. But, he said, he always knew he'd return to it. A few years ago, Morris resumed his research and finished his book.

"I was really thinking of the human interest, both survivors and first responders. It's just one incredible story after another. It's amazing," he said.

One of the first responders was Montana Highway Patrol Trooper Glen Stevens, who was dispatched from his Whitehall home to warn residents in the Madison River Valley of flooding should the Hebgen Dam fail. In the hours after the 11:37 p.m. earthquake, there were conflicting reports about whether the dam had held.

"I had a nice phone interview with him. He seemed to remember it quite well," Morris said. Stevens, now deceased, a deputy sheriff and two others drove up the valley, working their way toward the dam.

"They were one of the first people to reach Cliff Lake," where a boulder dislodged and killed Edgar H. Stryker and his wife, Ethel M. Stryker, who were camping with Edgar's three young sons, Morris said. The boys, who were in a separate tent nearby, were unhurt.

After helping at Cliff Lake, Stevens and his companions drove on toward the Madison River where they encountered the massive landslide. There they helped Irene Bennett and her son, Phil Bennett, who had camped with their family on the downstream side of the slide. Irene's husband, Purley, and their three other children died in the quake.

Morris also interviewed Carole Painter, who was 16 at the time and the daughter of Myrtle L. Painter, who later died of injuries in a Bozeman hospital.

And Morris interviewed Billings, Montana, resident Mildred "Tootie" Greene, a nurse who was camped with her family upstream of the slide. The Greene family survived uninjured, and Greene spent the night and next day aiding others, including Myrtle Painter.

Morris said he spent an afternoon about a year ago with Greene at her Billings home. "She was fantastic and sharp as a tack. She's one of the great heroes. She really stayed cool. I think she probably saved some lives," Morris said.

"She had a healthy attitude toward the tragedy," Morris said. Greene has been "extremely cooperative with anyone who ever asked" about the experience, he said.

Another nurse, Frances Donegan of Ohio, was camped with her husband, Fred, and their children near the dam, Morris said. His book recounts how Donegan rushed to help others who had gathered at what became known as Refuge Point.

Fred Donegan also helped rescue Grover and Lillian Mault, an elderly couple who had clung to a tree for hours as water rose around them.

"They deserve a lot of credit," Morris said. The Donegans went back to Ohio and "didn't make a lot of noise themselves. They really did a great job and deserve to be remembered," he said.

Morris' book features more than 100 photographs from national government archives, from survivors who contributed family photos and Morris' own photographs. The front and back cover photographs, he said, came from the Gallatin History Museum in Bozeman, Montana.

Morris started his research at the museum. “They were really great in helping me,” he said.

Morris also credits Joanne Girvin, a Forest Service employee at the Earthquake Lake Visitor Center, with keeping the story alive.

The Forest Service opened the center on top of the slide in 1967. More than 50,000 visitors stop annually at the site, the agency said.

Morris dedicated the book to the memory of Ernest Bruffey, the 29th victim of the earthquake. Morris said Bruffey, a Havre resident, had told others of his plan to hike Granite Peak in the Beartooth Mountains between Aug. 16 and 19. Bruffey was never heard from again.

Strong shocks were recorded in the area after the initial quake and there were slides on Granite Peak, Morris said. Searchers never found Bruffey’s body and his name was never included on official victim lists, he said. But evidence suggests Bruffey was a victim of the earthquake and deserves to be remembered, he said.

Morris will speak at the Montana Book Festival in Missoula, from Sept. 20 to 25.

His interest in the region extends beyond the 1959 earthquake. He authored, “The Fate of the Corps: What Became of the Lewis and Clark Explorers after the Expedition,” and co-authored, “The Mystery of John Colter: The Man Who Discovered Yellowstone.”

Morris is an independent writer and historian and has a master’s degree in American literature and a bachelor’s degree in philosophy, both from Brigham Young University.

NORTH DAKOTA:

Richland County water board appeals ND approval of diversion dam permit

By Tu-Uyen Tran on Aug 14, 2016 at 8:33 p.m.

FARGO — A month after the state of North Dakota gave a permit to the Fargo-Moorhead Diversion Authority for a dam south of the metro, opponents of the $2.2 billion project have appealed in a lawsuit.

It's the third lawsuit filed by diversion opponents, all three of which are still up in the air.

In a brief filed in state district court Aug. 3, the Richland County Water Resource District accused the State Engineer's Office of infringing on the district's right to regulate flood-control projects within the county and failing to give proper notification.

The dam would temporarily submerge farmland, mostly in Cass and Clay counties, when the Red River floods. But it could also flood 10,400 acres, or 16 square miles, of farmland in Richland County.

The state said in a brief filed Thursday, Aug. 11, that the water district needs to first seek a hearing with an administrative law judge, who presides over a separate court system, and asked the state district judge to dismiss the case for now.

Richland County and its neighbor in Minnesota, Wilkin County, are involved in the other two lawsuits as a joint power authority. The counties sued the U.S. Army Corps of Engineers and the Diversion Authority in 2013 and was eventually able to convince the judge to require an environmental review from the Minnesota Department of Natural Resources.

The DNR has completed the mostly favorable review, but the Richland-Wilkin group appealed in a lawsuit, saying the review isn't good enough.

The state of Minnesota is still reviewing the permit application for the diversion dam.

The North Dakota permit signed by State Engineer Garland Erbele July 8 listed the dam and its various components but allowed immediate construction only of an inlet structure that controls how much water from the dam enters the diversion channel. The dam is meant to reduce the Red River's flows into the diversion channel, which would route floodwater away from the metro area through a massive ditch to its west.

Each of the other components, such as the dam itself, also called an embankment, and inlets on several Red River tributaries, will require separate approval by the State Engineer.

Crucially for the Richland County water board, the only local water district the North Dakota permit mentioned the Diversion Authority must work with is the Southeast Cass County Water Resource District. That district is effectively a part of the Diversion Authority through its membership in Cass County Joint Water Resource District, a voting member on the authority board.

While some water will be stored in Richland County, the dam structures regulated by the State Engineer are all in Cass County. The Richland County district argues it must also be consulted because of the water stored within its jurisdiction.

The permit also mentioned another point of contention for diversion foes. The State Engineer had required that the Diversion Authority show it had the ability to acquire all land needed for the project, including in Richland County. Authority attorneys argued state courts have set precedent that allow entities like the Cass County Joint Water Resource District to exercise eminent domain outside their jurisdiction. The Cass County district is the Diversion Authority member charged with buying land for the project.

The Richland County water district argued that such a simple assertion was insufficient.

In a memo accompanying the permit, the State Engineer noted that the Attorney General's Office has said the state won't take a position on the legal validity of the assertion.

Nevertheless, the State Engineer agreed the authority did have a "realistic plan for the procurement of the necessary property rights."

The state district court has not set a hearing date yet. In the meantime, the state has filed for a hearing in front of an administrative law judge.

In North Dakota, people vs. oil pipeline protest strengthens

- By JAMES MacPHERSON
- Updated Aug 13, 2016

NEAR THE STANDING ROCK SIOUX RESERVATION, N.D. (AP) — Opponents of a $3.8 billion Midwest oil pipeline are vowing to keep up the pressure after this week's arrests at a construction zone in North Dakota.

The Standing Rock Sioux had quietly opposed the Dakota Access pipeline for months at a "spirit camp" near their reservation, which straddles the North Dakota-South Dakota border.

Protesters' resistance heated up this week as at least 18 people were arrested, and a Hollywood actress joined their gathering.

Tribal members say the pipeline would disturb sacred sites and could affect drinking water on the reservation and for people downstream.

The four-state pipeline's path in North Dakota would cross beneath the Little Missouri River once and the Missouri River twice. The company said the pipeline would include safeguards such as leak detection equipment.

SOUTH DAKOTA:

Disaster Declaration Sends Repairs, New Homes To Pine Ridge Reservation

Associated Press, August 14, 2016

PINE RIDGE, S.D. (AP) – The Federal Emergency Management Agency says roughly 200 manufactured homes have been turned over to tribal residents a year after a federal disaster declaration for the Pine Ridge Indian Reservation.

FEMA initiated a permanent housing construction program to address the extreme housing need on the reservation after the severe weather disaster. Officials identified over 300 households eligible for repairs or for replacement with a new manufactured home.

The agency says 196 new manufactured homes have been turned over to residents. Eighty five homes had been repaired as of Aug. 2, while a remaining 23 homes are expected to be fixed by early September.

President Barack Obama signed the disaster declaration in August 2015.

Little Growth On Wyoming Wildfires

Associated Press, August 12, 2016

CHEYENNE, Wyo. (AP) – Yellowstone National Park firefighters have contained a wildfire burning between Old Faithful and West Thumb and hope to have it controlled by Saturday.

The fire began Wednesday and firefighters immediately attacked it. They have kept it to less than an acre in size.

Better weather conditions have helped firefighters keep several new Wyoming wildfires largely in check Thursday and Friday.

A fire burning in the Shoshone National Forest east of Yellowstone and northwest of Cody grew slightly Thursday. The fire has burned about 2 square miles and is threatening about 95 structures.

Progress was expected Friday on another new fire burning about 20 miles southwest of Meeteetse.

Firefighters Thursday evening attacked a new fire that started in the John D. Rockefeller Jr. Memorial Parkway between Yellowstone and Grand Teton parks.

COLORADO:

Black Forest fire recovery leaders think about next time

By: Ellie Mulder Colorado Springs Gazette
August 13, 2016 Updated: August 13, 2016 at 9:32 pm
About 480 were destroyed, but at this point, "it's slowed down a lot. I don't think we're going to see more than what we have now," said Kenneth Clark, forest director for Black Forest Together.

The nonprofit organization, which has been a resource for those recovering after the fire, is looking to the future.

"It doesn't make any sense to clean up the black sticks if you're not trying to prevent another (fire)," Clark said. "The disaster showed us what's going to happen - it gives you a preview of what can happen at any time."

And Eddie Bracken, co-founder of Black Forest Together, said, "It's not a question of if, but when the next fire will come."

Near the organization's booth at the Black Forest Festival Saturday, Bracken and Clark discussed the progress that's been made since the fire and what more there is to be done.

Until 2016, all of the organization's work projects were completed for free, Clark said. Now, volunteers continue to complete mitigation and cleanup work for a small fee.

Education efforts occur in part to demonstrate the importance of continued mitigation and maintenance, Clark said. There is also a sense that after three years, people in the Colorado Springs area have begun to forget about the Black Forest fire.

"What we need people to understand is that there's still a lot of work to be done, and people in Colorado Springs specifically have become somewhat complacent with, 'The fire happened, it's over, it's fine,'" Clark said. "We get hundreds, if not thousands of volunteers from all over the country, but we're not getting them from home, and we need volunteers here to help us with the projects."

But the work continues. In 2014, the organization gave away about 10,000 seedlings for reforestation efforts, followed by between 6,000 and 7,000 in both 2015 and 2016, Bracken said.

And in 2014 and 2015, the organization completed over 180 work projects, including cleaning up burned land, reforestation, erosion control and green forest mitigation.

"There's a responsibility that you have to the forest to keep it mitigated, to your own home and to other people's homes that are adjacent," Bracken said.

For more information about Black Forest Together, visit blackforesttogether.org.

MONTANA:

New book recounts 1959 Yellowstone-area earthquake

CLAIR JOHNSON For the Star-Tribune

A powerful earthquake that struck the Hebgen Lake area near Yellowstone National Park in 1959 also left a powerful mark on a 7-year-old boy who was asleep in his Idaho Falls home.

Historian and author Larry E. Morris said he didn’t wake up. “My mom certainly did. I think a jar fell and broke,” he said.

The 7.5 magnitude earthquake killed 28 people, including an Idaho Falls family of five who was believed to have been entombed by a massive, quake-triggered landslide that buried a campground and plugged the Madison River about 9½ miles downstream from the Hebgen Lake Dam.

The slide took less than a minute and brought down more than 80 million tons of rock into the river, forming what became Earthquake Lake. At the time, the earthquake was the second-strongest in the lower 48 states in the 20th century, said the Forest Service, which operates the Earthquake Lake Visitor Center.

“It made quite an impression on me from the start,” Morris said.

Morris, who lives in Salt Lake City, is the author of a book released in July and titled, “The 1959 Yellowstone Earthquake,” published by Arcadia Publishing and The History Press.

The book tells the story of the earthquake with a focus on the victims and survivors and those who responded to the emergency.

The book also features a foreword by Lee Whittlesey, Yellowstone National Park historian.

Morris said his parents took him and his siblings to the memorial site on top of the landslide in the early 1960s, before the visitors center was built, heard a Forest Service ranger talk about the earthquake and toured the area.

“All those dead trees and Earthquake Lake. And one cabin tilted squeewampus. But that plaque with the names on it and how the folks were buried there made a powerful impression on me,” Morris said.

Morris has been captivated by the story ever since and has taken his own family to the site.

“It was a natural subject for a book. I find the story so compelling,” Morris said.

Morris initially began research for a book in 1990 but became sidetracked by other projects and put the earthquake story aside. But, he said, he always knew he’d return to it. A few years ago, Morris resumed his research and finished his book.

“I was really thinking of the human interest, both survivors and first responders. It’s just one incredible story after another. It’s amazing,” he said.

One of the first responders was Montana Highway Patrol Trooper Glen Stevens, who was dispatched from his Whitehall home to warn residents in the Madison River Valley of flooding should the Hebgen Dam fail. In the hours after the 11:37 p.m. earthquake, there were conflicting reports about whether the dam had held.

“I had a nice phone interview with him. He seemed to remember it quite well,” Morris said. Stevens, now deceased, a deputy sheriff and two others drove up the valley, working their way toward the dam.

“They were one of the first people to reach Cliff Lake,” where a boulder dislodged and killed Edgar H. Stryker and his wife, Ethel M. Stryker, who were camping with Edgar’s three young sons, Morris said. The boys, who were in a separate tent nearby, were unhurt.

After helping at Cliff Lake, Stevens and his companions drove on toward the Madison River where they encountered the massive landslide. There they helped Irene Bennett and her son, Phil Bennett, who had camped with their family on the downstream side of the slide. Irene’s husband, Purley, and their three other children died in the quake.

Morris also interviewed Carole Painter, who was 16 at the time and the daughter of Myrtle L. Painter, who later died of injuries in a Bozeman hospital.

And Morris interviewed Billings, Montana, resident Mildred “Tootie” Greene, a nurse who was camped with her family upstream of the slide. The Greene family survived uninjured, and Greene spent the night and next day aiding others, including Myrtle Painter.

Morris said he spent an afternoon about a year ago with Greene at her Billings home. “She was fantastic and sharp as a tack. She’s one of the great heroes. She really stayed cool. I think she probably saved some lives,” Morris said.

“She had a healthy attitude toward the tragedy,” Morris said. Greene has been “extremely cooperative with anyone who ever asked” about the experience, he said.

Another nurse, Frances Donegan of Ohio, was camped with her husband, Fred, and their children near the dam, Morris said. His book recounts how Donegan rushed to help others who had gathered at what became known as Refuge Point.

Fred Donegan also helped rescue Grover and Lillian Mault, an elderly couple who had clung to a tree for hours as water rose around them.

“They deserve a lot of credit,” Morris said. The Donegans went back to Ohio and “didn’t make a lot of noise themselves. They really did a great job and deserve to be remembered,” he said.

Morris’ book features more than 100 photographs from national government archives, from survivors who contributed family photos and Morris’ own photographs. The front and back cover photographs, he said, came from the Gallatin History Museum in Bozeman, Montana.

Morris started his research at the museum. “They were really great in helping me,” he said.

Morris also credits Joanne Girvin, a Forest Service employee at the Earthquake Lake Visitor Center, with keeping the story alive.

The Forest Service opened the center on top of the slide in 1967. More than 50,000 visitors stop annually at the site, the agency said.

Morris dedicated the book to the memory of Ernest Bruffey, the 29th victim of the earthquake. Morris said Bruffey, a Havre resident, had told others of his plan to hike Granite Peak in the Beartooth Mountains between Aug. 16 and 19. Bruffey was never heard from again.

Strong shocks were recorded in the area after the initial quake and there were slides on Granite Peak, Morris said. Searchers never found Bruffey's body and his name was never included on official victim lists, he said. But evidence suggests Bruffey was a victim of the earthquake and deserves to be remembered, he said.

Morris will speak at the Montana Book Festival in Missoula, from Sept. 20 to 25.

His interest in the region extends beyond the 1959 earthquake. He authored, "The Fate of the Corps: What Became of the Lewis and Clark Explorers after the Expedition," and co-authored, "The Mystery of John Colter: The Man Who Discovered Yellowstone."

Morris is an independent writer and historian and has a master's degree in American literature and a bachelor's degree in philosophy, both from Brigham Young University.

NORTH DAKOTA:

Richland County water board appeals ND approval of diversion dam permit

By Tu-Uyen Tran on Aug 14, 2016 at 8:33 p.m.

FARGO — A month after the state of North Dakota gave a permit to the Fargo-Moorhead Diversion Authority for a dam south of the metro, opponents of the $2.2 billion project have appealed in a lawsuit.

It's the third lawsuit filed by diversion opponents, all three of which are still up in the air.

In a brief filed in state district court Aug. 3, the Richland County Water Resource District accused the State Engineer's Office of infringing on the district's right to regulate flood-control projects within the county and failing to give proper notification.

The dam would temporarily submerge farmland, mostly in Cass and Clay counties, when the Red River floods. But it could also flood 10,400 acres, or 16 square miles, of farmland in Richland County.

The state said in a brief filed Thursday, Aug. 11, that the water district needs to first seek a hearing with an administrative law judge, who presides over a separate court system, and asked the state district judge to dismiss the case for now.

Richland County and its neighbor in Minnesota, Wilkin County, are involved in the other two lawsuits as a joint power authority. The counties sued the U.S. Army Corps of Engineers and the Diversion Authority in 2013 and was eventually able to convince the judge to require an environmental review from the Minnesota Department of Natural Resources.

The DNR has completed the mostly favorable review, but the Richland-Wilkin group appealed in a lawsuit, saying the review isn't good enough.

The state of Minnesota is still reviewing the permit application for the diversion dam.

The North Dakota permit signed by State Engineer Garland Erbele July 8 listed the dam and its various components but allowed immediate construction only of an inlet structure that controls how much water from the dam enters the diversion channel. The dam is meant to reduce the Red River's flows into the diversion channel, which would route floodwater away from the metro area through a massive ditch to its west.

Each of the other components, such as the dam itself, also called an embankment, and inlets on several Red River tributaries, will require separate approval by the State Engineer.

Crucially for the Richland County water board, the only local water district the North Dakota permit mentioned the Diversion Authority must work with is the Southeast Cass County Water Resource District. That district is effectively a part of the Diversion Authority through its membership in Cass County Joint Water Resource District, a voting member on the authority board.

While some water will be stored in Richland County, the dam structures regulated by the State Engineer are all in Cass County. The Richland County district argues it must also be consulted because of the water stored within its jurisdiction.

The permit also mentioned another point of contention for diversion foes. The State Engineer had required that the Diversion Authority show it had the ability to acquire all land needed for the project, including in Richland County. Authority attorneys argued state courts have set precedent that allow entities like the Cass County Joint Water Resource District to exercise eminent domain outside their jurisdiction. The Cass County district is the Diversion Authority member charged with buying land for the project.

The Richland County water district argued that such a simple assertion was insufficient.

In a memo accompanying the permit, the State Engineer noted that the Attorney General's Office has said the state won't take a position on the legal validity of the assertion. Nevertheless, the State Engineer agreed the authority did have a "realistic plan for the procurement of the necessary property rights."

The state district court has not set a hearing date yet. In the meantime, the state has filed for a hearing in front of an administrative law judge.

COLORADO:

Minor charged with arson in Beaver Creek Fire

Jason Pohl , jasonpohl@coloradoan.com 6:07 p.m. MDT October 21, 2016

A juvenile has been formally charged with arson in connection with thesprawling Beaver Creek Fire that was first detected in June and continues to smolder four months later in Jackson County, near Walden.

The Eighth Judicial District Attorney's Office, which spans Larimer and Jackson counties, filed the charges Oct. 4. Prosecutors refused on Friday to release further information about the case, including details that might indicate how the fire started or what the suspect's role was.

They also declined to explain the nearly three-week gap between formally filing the charges and making the announcement through a news release.

FIRE: Prescribed burns planned for Soapstone Prairie

U.S. Forest Service Law Enforcement had indicated throughout summer that the fire was human-caused, and an incident update in August confirmed the findings. Further details have not yet been made available, and investigators are continuing to conduct follow-up interviews and finalize reports, the district attorney's office said.

The Beaver Creek Fire was first detected June 19 north of Walden and had burned 38,380 acres as of Friday afternoon. One cabin was destroyed, along with 16 other outbuildings. No homes were destroyed, and no injuries were reported.

The fire charred the most acreage this year among all of Colorado's wildfires. Friday marked the day crews had hoped to completely contain the fire, but officials have said it might continue to smolder in some areas until snow falls.

Out of the flood, tiny house hotel sprouts up in Lyons

WeeCasa is an inn, but also lets people try tiny-house living before they buy

A Lyons mobile home park that washed out in the 2013 floods is gaining new life, one 135- to 238-square-foot structure at a time.

Nestled near a crook of St. Vrain Creek, the 10-acre property — just steps from downtown Lyons — is home to 17 tiny houses and counting, all of them on wheels, licensed as recreational vehicles and able to be pulled away in 30 minutes or less.

It’s one part hotel and one part showroom for Colorado’s burgeoning tiny house industry.

“We couldn’t put mobile homes back here,” said “Wee-EO” Kenyon Waugh, a Lyons resident who joined forces with the property owners to open WeeCasa in 2015. “Reading through the things that you can do in a flood plain, in (Federal Emergency Management Agency) regulations, it actually says an RV park is a good thing to have.”

Guests can spend a night or two in one of WeeCasa’s tiny houses, whether they’re there to try before they buy or to just check off a bucket-list item. The tiny house hotel also offers regularly scheduled tours for anyone interested in checking out their units, most of which were built by Colorado-based manufacturers.

The decision to operate both as a hotel and de facto tiny house showroom, Waugh said, was a matter of economics, as well as wanting to help support the larger tiny-living movement.

“It’s such a new industry,” he said. “The more people know about tiny houses, the more people will want to say, ‘I’ve stayed in a tiny house.’ ”

And people are staying. In its short life, WeeCasa has been featured multiple times on HGTV, and earlier this year, Outside magazine named WeeCasa one of its 28 best trips of 2016 anywhere in the world.

“We held the first jamboree two years ago, and we thought we’d have 4,000-5,000 people attend. We had 40,000,” said Whalen, who also works for EcoCabins, a founding sponsor of the jamboree. “The movement has national support that is larger and more public than anybody ever imagined.”

With its creative, outdoors-oriented population and supportive state government, Colorado is also home to a growing number of tiny house manufacturers, she said. Among them is arguably the biggest name in tiny houses, Tumbleweed Tiny House Co., which has its production factory in Colorado Springs.

“It’s come from something that was completely underground to something that’s extremely public,” Whalen said. “It’s large enough that it can actually support many different types of professionals in something that’s really become an industry.”

At WeeCasa, five more tiny houses — already on order — are set to be delivered this spring. That will bring Colorado’s first tiny house hotel up to 22 units. There were 10 when it opened in May 2015.

Clustered in two rows, the tiny houses share their riverfront property with River Bend, a wedding venue operated by the property’s owners, Betsy Burton and Mike Whipp. Burton and Whipp also own the Lyons Farmette, on the east side of town.

The weddings bring a good business, but 60 percent of guests are people who just want to stay in a tiny house, Waugh said.

Overnight guests generally fall into two categories: people who have heard about tiny houses or seen them on TV and want the experience of staying in one; and those who are considering making the switch to tiny living full-time and who want to do a test drive before they invest in their own small home.

“Especially when we first opened, we had a lot of people who were thinking about doing it,” Waugh said. “They bring things as though they were going to live in them. One woman brought a cat bed — she wasn’t allowed to have the cat here, but she wanted to see where it would fit and how it would be.”

Guests have even specifically requested a unit with an oven, because they wanted to see what it would be like to make a quiche in a tiny kitchen. (Some WeeCasa units have fully equipped kitchens, while others have more spartan setups, including mini-fridges and single-burner cook tops.)

For many prospective tiny house owners, being able to climb around inside a unit — or even stay overnight — is an important part of the decisionmaking process, said Daniel Patterson, supervisor at Durango-based Rocky Mountain Tiny Houses.

“People are a little skeptical. They think they’re cute, but is it really going to work for them?” Patterson said. “You can’t get a feel for a space from just looking at it. It’s an aesthetics judgment that comes to you when you actually get in the space — oh, you can stand up and stretch out and not touch both walls.”

Rocky Mountain Tiny Houses has one unit at WeeCasa: The 135-square-foot unit, which is the tiniest of the hotel’s homes, is owned by a woman who splits her time between Colorado and Alaska and lets WeeCasa rent out her home for the part of the year she’s not living in it.

Founder Greg Parham said he would “certainly be interested” in showcasing more of his houses that way, but for now, the small company doesn’t have the capital to build a bunch of showroom models.

“The benefit to me is that people get to see our work and our design and our craftsmanship,” Parham said. “Most people have done their homework. We’re one of the few builders that can build to the custom level they’re looking for.”

Right now, WeeCasa owns about half of its units. The rest either are leased from their owners or are showroom models from builders, Waugh said. Eleven are from Sprout Tiny Homes in La Junta, including two that were custom-built specifically with hotel guests in mind.

One change that was made to all of the units: Any composting toilets have been replaced with dual flush toilets connected to city water and sewer.

“A lot of people ask about compost toilets,” Waugh said. “Ninety-five percent of the world does not want to use a compost toilet and 99.99 percent don’t want want to use somebody else’s compost toilet.”

For his part, Waugh was first drawn to the idea of tiny living after he and his wife thru-hiked the 2,190-mile Appalachian Trail as ultra-light backpackers.

“I just started being fascinated with the idea,” he said. “Living in a tiny house is basically permanently living as a backpacker. Everything has to have three uses or it shouldn’t be in the house.”

Waugh bought his first tiny house on Craigslist and probably put 1,000 miles on his car looking at different styles and models. He still lives in a full-size house — he and his wife have two young kids — but he hasn't ruled it out of his future.

"I tell my kids that when they have a house, I'm going to put one in the backyard, in each of theirs," Waugh said. "They can rent it out except for the eight weeks I get. I don't want to stay in your house — I see how you keep your rooms now. Mom and I will be in the back."

Flood diversion project aims to remove entire city of Grafton from flood plain

By Angeline McCall on Oct 22, 2016 at 12:09 a.m.

GRAFTON, ND (WDAZ-TV) - An effort to keep one city safer has leaders scrambling to find $14 million.

Chris West, Grafton mayor: "It's a daunting experience. It's hard on everybody."

Grafton's mayor talks of the city's struggle with flooding. Just two years ago, three floods hit Grafton during the spring snowmelt.

Grafton has secured $32 million in funding for a flood diversion program, but that's not enough. The project costs $50 million, so the city needs to come up with $15 million more. They have only $1 million in the bag.

Mary Dusek, Grafton resident: "I think it's an important thing to do. I think it will help our town, it will help the people living here. It will benefit most everyone."

The other $14 million will come from taxpayers, but most in town say they're okay with that.

Time is running out to come up with the funds. Construction for the project will start next summer, so the city is hoping to get a loan in the meantime.

Mayor West: "The three branches of the river come in, and it's allowed to take the water through the north end of the community."

The 13-mile levy system around the entire city is going to start on the outskirts of Grafton at 6th and 17th.

While taxpayers will fund part of the project it will actually help their pocketbooks by keeping flood insurance costs down, which can climb as high as $4,000 per year for Grafton residents.

Jo Ditz, Grafton resident: "Every year the insurance goes up and up for flood insurance. And the house we live in has never had a flood. And yet we have to pay flood insurance."

Richard Tarrell, Grafton resident: "If we get the flood insurance, it will help immensely for us to compete for the people. We need people moving to town."

And the hope is that the project will completely take Grafton off of the 100-year flood plain.

Mayor West: "We know that what we're doing for our community will be provided for many years and some great protection."

FEMA-RELATED STORIES:

After Sandy, Overpromising And Underdelivering

New York Times, October 21, 2016

The fourth anniversary of Hurricane Sandy will come and go next week, but thousands of storm-struck New York City homeowners will still be waiting for their houses to be rebuilt under the city's misbegotten Build It Back program.

The program is $500 million over budget and on track to blow its end-of-2016 completion deadline. Under the program, begun by Mayor Michael Bloomberg, the city was to repair or rebuild homes or to reimburse homeowners for repairs they completed themselves.

Of the 5,565 single-family homes in the city-managed construction pipeline, only 44 percent have been completed so far, and Mayor Bill de Blasio says that figure will reach 75 percent by the end of the year. Build It Back was originally budgeted to use $1.7 billion in federal housing funds, but now the de Blasio administration says it needs an additional $500 million in city funds to finish the job.

"My team and I take personal responsibility," Mr. de Blasio said in a letter accompanying an October report laying out the bad news. The administration hasn't set any new final deadlines, given some uncertainty in coming months over when rebuilding will start; the city is allowing homeowners to delay construction so that they can stay in their homes over the holidays.

It's clear from the anger that administration officials faced at a City Council hearing on Thursday that Mr. de Blasio is paying the price for the managerial blunder of overpromising and underdelivering. Councilman Mark Treyger, chairman of the Recovery and Resiliency Committee, called it an "outrage" that the budget had somehow climbed by half a billion dollars, even though the total number of participants — about 8,500 — was far lower than the 22,000 who filed applications when the program began.

Build It Back started slowly. When Mr. de Blasio took office in 2014, no homes were under construction, and no checks had been written. Mr. de Blasio set himself up for a stumble with his now-unrealistic 2016 deadline, as construction costs climbed and the job of rebuilding homes in the Sandy zone proved extremely difficult. Bringing decades-old bungalows up to stringent building codes, with insulation and sprinklers, heating, ventilation and air-conditioning systems — and then lifting them 10 to 12 feet on stilts in the sand — was no simple task.

In fairness to the mayor, storm rebuilding is always messed up, from Louisiana to Mississippi to South Carolina to the Jersey Shore, and the federal government and the states are rife with storm-recovery programs bogged down by complexity, bureaucratic inertia, homeowner resistance and nonparticipation, and construction and engineering challenges. And while the Staten Island borough president, James Oddo, vented about the many Sandy recovery foul-ups in a recent Twitter barrage and on Facebook, he also said Mr. de Blasio had been right to set a hard deadline for Build It Back, even if he blew it, because without one, the program wouldn't have gotten as far as it has.

Mr. de Blasio clearly needs more time, a chance to deliver on his promises. But there should also be, as Mr. Oddo has urged, an independent post-mortem investigation of this and other Sandy failures, looking into why its initial cost estimates were so far off and what the city plans to do to avoid problems the next time.

One likely answer is going to be very hard for homeowners to accept: In a rapidly changing climate, their windblown condos and bungalows are in harm's way, and what government really should be rebuilding is storm-absorbing wetlands and parks.

Everybody wants to live on the beach. But when the storms blow and the waters rise, overmatched bureaucrats and frustrated homeowners will end up caught in the undertow, for years to come. In this sense, the very words "Build It Back" miss the point — unless by "back" you mean back, way back, from the water's edge.

Washington State's Plan For Megaquake "Grossly Inadequate," Review Finds

By Sandi Doughton And Daniel Gilbert

Seattle Times, October 22, 2016

The largest disaster drill ever conducted in the Pacific Northwest found that, despite decades of warnings, the region remains dangerously unprepared to deal with a Cascadia megaquake and tsunami.

During the four-day "Cascadia Rising" exercise in June, 23,000 participants grappled with a hypothetical catastrophe that knocked out power, roads and communications and left communities battered, isolated — and with no hope of quick relief.

Washington state officials called their own response plans "grossly inadequate," according to a draft report and records reviewed by The Seattle Times. The report warns that "the state is at risk of a humanitarian disaster within 10 days" of the quake.

The government's ability to provide aid in the immediate aftermath of a catastrophic earthquake is so limited that Washington state's Emergency Management Division will now ask residents to stock enough resources to survive on their own for up to two weeks, instead of the three days it advised in the past.

The report also warned that Washington's own laws could actually prevent officials from marshaling medical resources to treat the legions of injured people.

The blunt assessment comes from a late-stage draft of Washington state's post-mortem on the exercise, which followed two years of planning and included officials from three states, the U.S. government and British Columbia. Washington's emergency-management division plans to brief the governor on the findings in January.

"We know this is an issue that will require strong coordination at every level of government," said Tara Lee, a spokeswoman for Gov. Jay Inslee.

Beyond the immediate aftermath of the disaster, the report says Washington lacks any long-term strategy to help the region's economy, cities and businesses recover from what would be one of the worst natural disasters the United States has ever faced.

"Everything we depend on to live our 21st-century lives is going to be significantly degraded or eradicated," said Washington Emergency Management Director Robert Ezelle. "The needs are going to be immediate, they are going to be urgent and they are going to be overwhelming."

The "Cascadia Rising" scenario, developed by the Federal Emergency Management Agency (FEMA), estimates that a magnitude 9 quake and tsunami could kill 14,000 people and injure more than 30,000 in Washington and Oregon alone. More than 7,000 highway bridges and 16,000 miles of roadway are expected to suffer moderate to severe damage, including all routes to the Pacific Coast and Washington's major east-west corridors.

The severity of the destruction was not news to emergency managers, Ezelle said. But the drill succeeded in exposing gaps and weaknesses in plans that had never been tested on such a massive scale.

"It gave us perspective that we did not have," Ezelle said.

State, local and federal agencies are now finalizing their own "after-action" reports that will identify what worked, what failed and how to apply the lessons learned.

A lack of resources is a recurring theme in those post-mortems. FEMA's report noted that emergency management operations across the Northwest suffer from staffing and budget shortages. In many jurisdictions, a single person is responsible for emergency planning.

"If this event happens, the first question everybody is going to ask is: 'How come you weren't ready?'" said Chuck Wallace, the manager and only full-time employee of Grays Harbor County's emergency department. "Right now, we're working with pennies."

The state already has a plan to improve its resilience. Published in 2012, it calls for a series of steps to strengthen vulnerable buildings, ensure the safety of schools and harden critical infrastructure.

However, as the "Cascadia Rising" report notes, the recommendations haven't been implemented.

"Washington is not currently a resilient state," the report says.

The challenges posed by the simulated disaster were obvious from the first day. When Ezelle attempted to contact Gov. Inslee's office, his satellite phone didn't work and he had to get a second one to make the call.

Several participants had trouble getting satellite phones to operate as they attempted to simulate operations without regular phone or internet service. Ham radio operators helped fill the gap, along with military-communications units deployed by the National Guard.

One of the state's top priorities is to develop a robust emergency-communications system, though Ezelle said he's not sure what form it would take.

"We've got to be able to talk and we've got to be able to share data," he said.

The breakdown in communications illustrated a problem with current plans that require state and federal responders to wait for local communities to request assistance. That works well in smaller-scale emergencies, like floods and fires, but in the chaos and blackouts that follow a Cascadia megaquake and tsunami, those pleas may not get through, Ezelle said.

During the drill, Seattle emergency managers got little or no response to their requests for assistance, including for urban search-and-rescue teams, according to the city's analysis of the exercise.

A better approach is for the state to anticipate what communities will need and be prepared to push out supplies and personnel as soon as possible, Ezelle said.

The Washington National Guard is already working with local jurisdictions to anticipate their needs and let them know what types of resources are available, said Lt. Col. Clayton Braun, deputy joint operations officer at the Washington Military Department.

During the drill, participants simulated situations ranging from a sinkhole opening up in downtown Seattle, to coordinating rescues from collapsed buildings and allocating scarce fuel supplies.

Though the scenarios were hypothetical, tempers sometimes flared for real.

One of the biggest sources of tension noted in the report was over how quickly damaged roads and bridges could be reopened. There aren't enough helicopters in the region to supply all the communities that will need help, Ezelle said, so damaged roadways will need to be cleared as soon as possible.

"If you cannot get the transportation infrastructure up and running, you're not going to have a response," he said.

On one occasion, emergency managers told Washington State Department of Transportation (WSDOT) officials that it was "unacceptable" to take three days to clear a massive landslide from Interstate 90, according to records reviewed by The Times.

Transportation officials were frustrated when emergency officials were slow to identify priority routes for clearance. The result was an atmosphere one evaluator described as "poisonous."

Washington Military Department spokeswoman Karina Shagren said the friction "highlights the stressful environment — which can exist in both real-world and exercise scenarios."

WSDOT is working on a plan to address gaps identified in the exercise and to better manage expectations of how long it will take to repair damage, WSDOT spokeswoman Barbara LaBoe said.

The exercise also showed that the state's traditional approach of relying on the Red Cross won't be adequate to handle the nearly 3 million people who could need food, water and shelter.

Hospitals will be overwhelmed with casualties, yet Washington's governor lacks the authority to grant some types of medical waivers, such as allowing doctors and nurses from other states and countries to help.

Lee, the governor's spokeswoman, said the issue "is one of many that we are looking into following the exercise."

With no expectation of more funding in the near term, several emergency-management departments around the state hope to recruit and train more volunteers.

Seattle Emergency Management Director Barb Graff recently assigned one staff person to coordinate a corps of volunteers to assist with search and rescue, help run emergency shelters and perform other tasks.

The state Emergency Management Division is requesting $750,000 a year for a public-education campaign urging citizens to beef up their emergency kits for up to two weeks.

Clallam County emergency coordinator Penny Linterman goes even further. On the Olympic Peninsula, where communities are likely to be cut off due to road and bridge damage, she recommends people keep enough supplies on hand for three weeks to a month.

"What you have on hand when this occurs is how you're going to survive," she said.

COLORADO:

Minor charged with arson in Beaver Creek Fire

Jason Pohl , jasonpohl@coloradoan.com 6:07 p.m. MDT October 21, 2016

A juvenile has been formally charged with arson in connection with the sprawling Beaver Creek Fire that was first detected in June and continues to smolder four months later in Jackson County, near Walden.

The Eighth Judicial District Attorney's Office, which spans Larimer and Jackson counties, filed the charges Oct. 4. Prosecutors refused on Friday to release further information about the case, including details that might indicate how the fire started or what the suspect's role was. They also declined to explain the nearly three-week gap between formally filing the charges and making the announcement through a news release.

FIRE: Prescribed burns planned for Soapstone Prairie

U.S. Forest Service Law Enforcement had indicated throughout summer that the fire was human-caused, and an incident update in August confirmed the findings. Further details have not yet been made available, and investigators are continuing to conduct follow-up interviews and finalize reports, the district attorney's office said.

The Beaver Creek Fire was first detected June 19 north of Walden and had burned 38,380 acres as of Friday afternoon. One cabin was destroyed, along with 16 other outbuildings. No homes were destroyed, and no injuries were reported.

The fire charred the most acreage this year among all of Colorado's wildfires. Friday marked the day crews had hoped to completely contain the fire, but officials have said it might continue to smolder in some areas until snow falls.

Out of the flood, tiny house hotel sprouts up in Lyons

WeeCasa is an inn, but also lets people try tiny-house living before they buy

A Lyons mobile home park that washed out in the 2013 floods is gaining new life, one 135- to 238-square-foot structure at a time.

Nestled near a crook of St. Vrain Creek, the 10-acre property — just steps from downtown Lyons — is home to 17 tiny houses and counting, all of them on wheels, licensed as recreational vehicles and able to be pulled away in 30 minutes or less.

It's one part hotel and one part showroom for Colorado's burgeoning tiny house industry.

"We couldn't put mobile homes back here," said "Wee-EO" Kenyon Waugh, a Lyons resident who joined forces with the property owners to open WeeCasa in 2015. "Reading through the things that you can do in a flood plain, in (Federal Emergency Management Agency) regulations, it actually says an RV park is a good thing to have."

Guests can spend a night or two in one of WeeCasa's tiny houses, whether they're there to try before they buy or to just check off a bucket-list item. The tiny house hotel also offers regularly scheduled tours for anyone interested in checking out their units, most of which were built by Colorado-based manufacturers.

The decision to operate both as a hotel and de facto tiny house showroom, Waugh said, was a matter of economics, as well as wanting to help support the larger tiny-living movement.

"It's such a new industry," he said. "The more people know about tiny houses, the more people will want to say, 'I've stayed in a tiny house.' "

And people are staying. In its short life, WeeCasa has been featured multiple times on HGTV, and earlier this year, Outside magazine named WeeCasa one of its 28 best trips of 2016 anywhere in the world.

"We held the first jamboree two years ago, and we thought we'd have 4,000-5,000 people attend. We had 40,000," said Whalen, who also works for EcoCabins, a founding sponsor of the jamboree. "The movement has national support that is larger and more public than anybody ever imagined."

With its creative, outdoors-oriented population and supportive state government, Colorado is also home to a growing number of tiny house manufacturers, she said. Among them is arguably the biggest name in tiny houses, Tumbleweed Tiny House Co., which has its production factory in Colorado Springs.

"It's come from something that was completely underground to something that's extremely public," Whalen said. "It's large enough that it can actually support many different types of professionals in something that's really become an industry."

At WeeCasa, five more tiny houses — already on order — are set to be delivered this spring. That will bring Colorado's first tiny house hotel up to 22 units. There were 10 when it opened in May 2015.

Clustered in two rows, the tiny houses share their riverfront property with River Bend, a wedding venue operated by the property's owners, Betsy Burton and Mike Whipp. Burton and Whipp also own the Lyons Farmette, on the east side of town.

The weddings bring a good business, but 60 percent of guests are people who just want to stay in a tiny house, Waugh said.

Overnight guests generally fall into two categories: people who have heard about tiny houses or seen them on TV and want the experience of staying in one; and those who are considering making the switch to tiny living full-time and who want to do a test drive before they invest in their own small home.

"Especially when we first opened, we had a lot of people who were thinking about doing it," Waugh said. "They bring things as though they were going to live in them. One woman brought a cat bed — she wasn't allowed to have the cat here, but she wanted to see where it would fit and how it would be."

Guests have even specifically requested a unit with an oven, because they wanted to see what it would be like to make a quiche in a tiny kitchen. (Some WeeCasa units have fully equipped kitchens, while others have more spartan setups, including mini-fridges and single-burner cook tops.)

For many prospective tiny house owners, being able to climb around inside a unit — or even stay overnight — is an important part of the decisionmaking process, said Daniel Patterson, supervisor at Durango-based Rocky Mountain Tiny Houses.

"People are a little skeptical. They think they're cute, but is it really going to work for them?" Patterson said. "You can't get a feel for a space from just looking at it. It's an aesthetics judgment that comes to you when you actually get in the space — oh, you can stand up and stretch out and not touch both walls."

Rocky Mountain Tiny Houses has one unit at WeeCasa: The 135-square-foot unit, which is the tiniest of the hotel's homes, is owned by a woman who splits her time between Colorado and Alaska and lets WeeCasa rent out her home for the part of the year she's not living in it.

Founder Greg Parham said he would "certainly be interested" in showcasing more of his houses that way, but for now, the small company doesn't have the capital to build a bunch of showroom models.

“The benefit to me is that people get to see our work and our design and our craftsmanship,” Parham said. “Most people have done their homework. We’re one of the few builders that can build to the custom level they’re looking for.”

Right now, WeeCasa owns about half of its units. The rest either are leased from their owners or are showroom models from builders, Waugh said. Eleven are from Sprout Tiny Homes in La Junta, including two that were custom-built specifically with hotel guests in mind.

One change that was made to all of the units: Any composting toilets have been replaced with dual flush toilets connected to city water and sewer.

“A lot of people ask about compost toilets,” Waugh said. “Ninety-five percent of the world does not want to use a compost toilet and 99.99 percent don’t want want to use somebody else’s compost toilet.”

For his part, Waugh was first drawn to the idea of tiny living after he and his wife thru-hiked the 2,190-mile Appalachian Trail as ultra-light backpackers.

“I just started being fascinated with the idea,” he said. “Living in a tiny house is basically permanently living as a backpacker. Everything has to have three uses or it shouldn’t be in the house.”

Waugh bought his first tiny house on Craigslist and probably put 1,000 miles on his car looking at different styles and models. He still lives in a full-size house — he and his wife have two young kids — but he hasn’t ruled it out of his future.

“I tell my kids that when they have a house, I’m going to put one in the backyard, in each of theirs,” Waugh said. “They can rent it out except for the eight weeks I get. I don’t want to stay in your house — I see how you keep your rooms now. Mom and I will be in the back.”

Washington State’s Plan For Megaquake “Grossly Inadequate,” Review Finds

By Sandi Doughton And Daniel Gilbert

Seattle Times, October 22, 2016

The largest disaster drill ever conducted in the Pacific Northwest found that, despite decades of warnings, the region remains dangerously unprepared to deal with a Cascadia megaquake and tsunami.

During the four-day “Cascadia Rising” exercise in June, 23,000 participants grappled with a hypothetical catastrophe that knocked out power, roads and communications and left communities battered, isolated — and with no hope of quick relief.

Washington state officials called their own response plans “grossly inadequate,” according to a draft report and records reviewed by The Seattle Times. The report warns that “the state is at risk of a humanitarian disaster within 10 days” of the quake.

The government’s ability to provide aid in the immediate aftermath of a catastrophic earthquake is so limited that Washington state’s Emergency Management Division will now ask residents to stock enough resources to survive on their own for up to two weeks, instead of the three days it advised in the past.

The report also warned that Washington’s own laws could actually prevent officials from marshaling medical resources to treat the legions of injured people.

The blunt assessment comes from a late-stage draft of Washington state’s post-mortem on the exercise, which followed two years of planning and included officials from three states, the U.S. government and British Columbia. Washington’s emergency-management division plans to brief the governor on the findings in January.

“We know this is an issue that will require strong coordination at every level of government,” said Tara Lee, a spokeswoman for Gov. Jay Inslee.

Beyond the immediate aftermath of the disaster, the report says Washington lacks any long-term strategy to help the region’s economy, cities and businesses recover from what would be one of the worst natural disasters the United States has ever faced.

“Everything we depend on to live our 21st-century lives is going to be significantly degraded or eradicated,” said Washington Emergency Management Director Robert Ezelle. “The needs are going to be immediate, they are going to be urgent and they are going to be overwhelming.”

The “Cascadia Rising” scenario, developed by the Federal Emergency Management Agency (FEMA), estimates that a magnitude 9 quake and tsunami could kill 14,000 people and injure more than 30,000 in Washington and Oregon alone. More than 7,000 highway bridges and 16,000 miles of roadway are expected to suffer moderate to severe damage, including all routes to the Pacific Coast and Washington’s major east-west corridors.

The severity of the destruction was not news to emergency managers, Ezelle said. But the drill succeeded in exposing gaps and weaknesses in plans that had never been tested on such a massive scale.

“It gave us perspective that we did not have,” Ezelle said.

State, local and federal agencies are now finalizing their own “after-action” reports that will identify what worked, what failed and how to apply the lessons learned.

A lack of resources is a recurring theme in those post-mortems. FEMA’s report noted that emergency management operations across the Northwest suffer from staffing and budget shortages. In many jurisdictions, a single person is responsible for emergency planning.

"If this event happens, the first question everybody is going to ask is: 'How come you weren't ready?'" said Chuck Wallace, the manager and only full-time employee of Grays Harbor County's emergency department. "Right now, we're working with pennies."

The state already has a plan to improve its resilience. Published in 2012, it calls for a series of steps to strengthen vulnerable buildings, ensure the safety of schools and harden critical infrastructure.

However, as the "Cascadia Rising" report notes, the recommendations haven't been implemented.

"Washington is not currently a resilient state," the report says.

The challenges posed by the simulated disaster were obvious from the first day. When Ezelle attempted to contact Gov. Inslee's office, his satellite phone didn't work and he had to get a second one to make the call.

Several participants had trouble getting satellite phones to operate as they attempted to simulate operations without regular phone or internet service. Ham radio operators helped fill the gap, along with military-communications units deployed by the National Guard.

One of the state's top priorities is to develop a robust emergency-communications system, though Ezelle said he's not sure what form it would take.

"We've got to be able to talk and we've got to be able to share data," he said.

The breakdown in communications illustrated a problem with current plans that require state and federal responders to wait for local communities to request assistance. That works well in smaller-scale emergencies, like floods and fires, but in the chaos and blackouts that follow a Cascadia megaquake and tsunami, those pleas may not get through, Ezelle said.

During the drill, Seattle emergency managers got little or no response to their requests for assistance, including for urban search-and-rescue teams, according to the city's analysis of the exercise.

A better approach is for the state to anticipate what communities will need and be prepared to push out supplies and personnel as soon as possible, Ezelle said.

The Washington National Guard is already working with local jurisdictions to anticipate their needs and let them know what types of resources are available, said Lt. Col. Clayton Braun, deputy joint operations officer at the Washington Military Department.

During the drill, participants simulated situations ranging from a sinkhole opening up in downtown Seattle, to coordinating rescues from collapsed buildings and allocating scarce fuel supplies.

Though the scenarios were hypothetical, tempers sometimes flared for real.

One of the biggest sources of tension noted in the report was over how quickly damaged roads and bridges could be reopened. There aren't enough helicopters in the region to supply all the communities that will need help, Ezelle said, so damaged roadways will need to be cleared as soon as possible.

"If you cannot get the transportation infrastructure up and running, you're not going to have a response," he said.

On one occasion, emergency managers told Washington State Department of Transportation (WSDOT) officials that it was "unacceptable" to take three days to clear a massive landslide from Interstate 90, according to records reviewed by The Times.

Transportation officials were frustrated when emergency officials were slow to identify priority routes for clearance. The result was an atmosphere one evaluator described as "poisonous."

Washington Military Department spokeswoman Karina Shagren said the friction "highlights the stressful environment — which can exist in both real-world and exercise scenarios."

WSDOT is working on a plan to address gaps identified in the exercise and to better manage expectations of how long it will take to repair damage, WSDOT spokeswoman Barbara LaBoe said.

The exercise also showed that the state's traditional approach of relying on the Red Cross won't be adequate to handle the nearly 3 million people who could need food, water and shelter.

Hospitals will be overwhelmed with casualties, yet Washington's governor lacks the authority to grant some types of medical waivers, such as allowing doctors and nurses from other states and countries to help.

Lee, the governor's spokeswoman, said the issue "is one of many that we are looking into following the exercise."

With no expectation of more funding in the near term, several emergency-management departments around the state hope to recruit and train more volunteers.

Seattle Emergency Management Director Barb Graff recently assigned one staff person to coordinate a corps of volunteers to assist with search and rescue, help run emergency shelters and perform other tasks.

The state Emergency Management Division is requesting $750,000 a year for a public-education campaign urging citizens to beef up their emergency kits for up to two weeks.

Clallam County emergency coordinator Penny Linterman goes even further. On the Olympic Peninsula, where communities are likely to be cut off due to road and bridge damage, she recommends people keep enough supplies on hand for three weeks to a month.

"What you have on hand when this occurs is how you're going to survive," she said.

Children From Central America Flood U.S. Border--Again USA Today

STORIES

COLORADO:

Solar Science, Education

By Billie Stanton Anleu

Colorado Springs (CO) Gazette, September 24, 2016

A new scientific endeavor in Colorado Springs could help safeguard the nation's electric grid, satellites, aircraft, spacecraft and radio transmissions and save hundreds of billions of dollars.

The first step is a biggie at 14,115 feet. It requires putting an observatory atop Pikes Peak – perhaps the only high-altitude site in the world with year-round access, a continual power source and hundreds of thousands of visitors a year.

The mountaintop observatory has been a two-decade quest by Dimitri Klebe, founder of the Pikes Peak Observatory and space content specialist for the Denver Museum of Nature & Science.

But he and Robert Sallee, board chairman of the National Space Science & Technology Institute, remain undeterred.

"We understand that the process may take (another) three or more years, but we are willing to stay the course," Sallee said last week.

The proposal has been lauded as a way to lure more people to the city's most famous icon, to spur more science, technology, engineering and math (STEM) education, to enlighten and entertain visitors and to complement the impending new Summit House.

But it could do so much more.

Scientists will be able to test instruments and learn how the sun affects the Earth.

When a big storm on the sun sends magnetized clouds through the atmosphere to Earth, for example, currents shoot through the ground and endanger everything from electrical grids to oil pipelines, said NSSTI board member Mark Miesch, a scientist with the National Center for Atmospheric Research High Altitude Observatory (HAO).

The potential effect is billions of dollars in losses. But hundreds of billions would be lost if a large solar storm hit, Miesch said.

Compare that with the $108 billion tab for Hurricane Katrina, the worst natural disaster in the U.S.

That's why space weather – the HAO's focus – is so important to the $1 billion-a-year satellite industry, utilities, airlines and others.

It's so important that the federal government has created a National Space Weather Strategy and Action Plan.

And in June, U.S. Sen. Gary Peters, D-Mich., introduced the Space Weather Research and Forecasting Act to the Senate to better predict and mitigate the effects of space weather. Co-sponsors are U.S. Sens. Cory Gardner, R-Colo. Gary Peters, D-Mich., and Cory Booker, D-N.J.

Forecasts are critical. A solar flare can disrupt radio transmissions, which are very important to the military.

Flight attendants traveling between London and Colorado can build up significant amounts of radiation, but planes can dodge a solar storm by changing routes or flying lower.

"But you don't want to do that unless you're sure. It costs a lot of money," Miesch said. "In order to improve forecasts, you need to increase understanding."

And that's a primary aim of the observatory, which would start with an 18-foot-diameter dome that can withstand 200 mph winds. It will be equipped with a viewing deck, a main 1-meter PlaneWave telescope for various kinds of research and a Lunt 6-inch H-Alpha Solar Telescope geared for sun studies. The entire installation would cover only 900 square feet.

Small telescopes, particularly with the sensors used today, collect more light than the older, bigger telescopes did, so they're more efficient for their size, Klebe said.

They also fill a niche for research needing a big view of the sky, such as finding planets around other stars. That can't be done through bigger telescopes, which only observe a smaller slice of sky, he said.

The 1-meter telescope will be the largest in Colorado, and it will be used by Colorado College, the Air Force Academy, the University of Denver and the University of Colorado at Boulder, among other educational and scientific institutions. It will be the biggest telescope in the Air Force Academy's international Falcon Telescope Network.

The solar telescope will be equipped with a camera, with images displayed in the Summit House, the city or on the Internet. And both scopes can be operated remotely.

Another instrument, an All Sky Visual and Infrared Analyzer, will record atmospheric conditions and phenomena, providing a 180-degree hemispheric perspective. A modified version of the instrument will identify smoke and ash particles in the atmosphere to help the Forest Service with swift response to wildfires.

The push will be to increase understanding not only among scientists, but also among students – including undergraduates from tribal colleges.

"We appreciate that Pikes Peak is a sacred space for Native Americans (including the Utes) and would not build anything there without their blessing," Miesch said. "We want them to be a partner in this. We want to inspire individuals of all backgrounds to pursue science and technology careers."

Construction of the observatory first requires obtaining a permit from the U.S. Forest Service. The observatory team will request a 15-year permit. An environmental impact statement also is needed, and the scientists would like to establish a private-government partnership to accomplish the EIS.

In 2019, the new Summit House is to be erected and the Army's High Altitude Research Laboratory on the peak will be moved. The following summer, the original research lab will be demolished, the site prepared and the observatory installed, if all goes according to plan.

Use of that site for the observatory reduces impacts on the fragile permafrost and is scientifically advantageous in relation to prevailing winds.

The Pikes Peak Observatory is expected to greatly enhance the new Summit House's destination value.

But tourism wasn't the motive for Klebe, who incorporated the observatory as a nonprofit in 1997 with a group of astronomers, astronauts, engineers and educators.

As a researcher at the University of Denver, whose telescope on Mount Evans closes in winter, he saw Pikes Peak as the ideal site for infrared astronomy and education.

In addition to the observatory, the group plans to deploy mobile science labs to remote schools to advance science and technology education.

Its mission, in addition to advancing scientific research, is “to promote the understanding and enjoyment of the universe through education at all levels, media presentations, environmental studies, historical preservation, cultural exhibits and the expansion of tourism to benefit the community.”

Storm damages 18 Oglala-area homes

Associated press 7:57 a.m. CDT September 26, 2016

OGLALA — A severe storm with strong winds damaged 18 homes in the Oglala area over the weekend.

The American Red Cross says most of the homes suffered minor damage to roofs, windows and siding, but four homes were deemed too damaged to be occupied. Those families are getting help with lodging.

Red Cross regional director Richard Smith says the agency is continuing to monitor the situation with Oglala Sioux emergency management officials.

FEMA-RELATED STORIES:

Children From Central America Flood U.S. Border--Again

By Alan Gomez

USA Today, September 23, 2016

The number of Central American children fleeing to United States is booming once again, as security and economic troubles continue to grip El Salvador, Guatemala and Honduras.

The rush of minors across the southwest border became a political firestorm in the summer of 2014, prompting the Obama administration to enact emergency measures to stem the flow and drawing intense scrutiny from critics of the president's immigration policies.

Last year, the efforts seemed to work as the number of unaccompanied minors from those three countries entering the U.S. dropped from nearly 70,000 in 2014 to 39,970.

Now the exodus to the USA is back on the rise. In the first 11 months of the 2016 fiscal year, which ends in September, 54,052 children made the journey.

There are many reasons for the surge:

--In El Salvador, people are fleeing a staggering level of violence that has made the country the murder capital of the world. It recorded a homicide rate of 104 people per 100,000 in 2015, the highest for any country in nearly 20 years, according to data from the World Bank.

--In Honduras, violence has come down in recent years, with a 15% drop in homicides in 2015, meaning many people leaving there are seeking better economic opportunities in the United States.

--In Guatemala, pockets of intense violence are driving some to the U.S. But Guatemalan officials said at the United Nations this week that their migrants are leaving mostly for economic reasons and should not be considered refugees.

And in all three, U.S. politics are at play. Republican presidential nominee Donald Trump has made a crackdown on illegal immigration a central tenet of his campaign, vowing to build a giant wall along the southwest border and deport millions of undocumented immigrants living in the U.S.

Mark Krikorian, executive director of the Center for Immigration Studies, a group that advocates against illegal immigration, said the prospect of a Trump presidency is a terrifying one for would-be immigrants, and is spurring the current rush of minors.

Krikorian said the Obama administration's "policy of deterrence" — warning Central Americans that they will be deported if they make the voyage — has fallen flat.

"Eighty percent of the people (Customs and Border Protection) catches are released," Krikorian said. "That's not deterrence. You'd be an idiot not to get into the United States now while you can."

The countries are making some progress in addressing their problems. In Honduras, the government created a commission to review all 14,000 members of the national police force, which has long been plagued by corruption. In the past few months, the commission has interviewed nearly 300 high-ranking police officers and dismissed 110 of them, according to a report from the Wilson Center, a Washington-based think tank.

In El Salvador, the government passed a law that's made it more difficult for gang members to continue running their operations from prisons. Before, people could easily smuggle cell phones into jail and even set up WiFi networks near the prisons so leaders could stay in contact with their gangs. But the new law has slowed that, according to Reuters.

President Obama requested $1 billion to help the so-called Northern Triangle countries improve their economies, security institutions and immigration enforcement capabilities. Congress approved $750 million in December, but most of that money hasn't arrived.

Nine Things to Know About Chemical Weapons
The Pueblo Chemical Depot is set to begin destroying the United States' largest remaining stockpile of chemical weapons this week in southern Colorado. Here are a few things to know about these chemical weapons and how we got here: April 22 marks the 100th anniversary of the first use of chemical weapons in modern warfare at Ypres in Belgium. From World War I to 1968, the United States produced nearly 40,000 tons of chemical weapons. These weapons were either nerve agents or blister agents. Mustard agent is a blister agent, which can cause redness and itching of the skin, irritation in the eyes, scarring and increased risk for lung and respiratory cancer. The Pueblo Chemical Depot in southern Colorado will destroy 2,600 tons of aging mustard agent beginning in March. The depot has about 780,000 shells containing mustard agent.

The Pueblo Chemical Depot is set to begin destroying the United States' largest remaining stockpile of chemical weapons this week in southern Colorado. Here are a few things to know about these chemical weapons and how we got here:

April 22 marks the 100th anniversary of the first use of chemical weapons in modern warfare at Ypres in Belgium.

From World War I to 1968, the United States produced nearly 40,000 tons of chemical weapons.

These weapons were either nerve agents or blister agents. Mustard agent is a blister agent, which can cause redness and itching of the skin, irritation in the eyes, scarring and increased risk for lung and respiratory cancer.

The Pueblo Chemical Depot in southern Colorado will destroy 2,600 tons of aging mustard agent beginning in March.

The depot has about 780,000 shells containing mustard agent.
Inform

PUEBLO – Destroying the nation's stash of World War II-era chemical weapons is nasty work, and after decades of delays, the Army is using robots to start the job inside a $4.5 billion plant on the Colorado prairie.

A newly trained human workforce of 1,400 controls the robotic machinery — one canary-yellow, long-armed device is dubbed Inga, another Igor — beginning a mission of emptying 780,000 wine-bottle-shaped projectiles inside sealed chambers behind 24-inch-thick blast walls.

The process minimizes human contact with deadly chemicals known as mustard agent, which was used to deny enemies access to land by attacking their eyes, skin and lungs.

"I like the work. This stuff has been sitting around 40, 50 years. It's about time we got to destroying it," said Jose Rosario, 33, an Army war veteran who in Iraq found a stash of Saddam Hussein's weapons.

Joe Amon, The Denver Post

Instrumentation technician Philip Kell washes down his partner Eric Irvinin wash down area at the Pueblo Chemical agent Pilot plant training area on Sept. 14, 2016 in Pueblo.

"These robots were built for precision, all computer programmed. I don't have any worries that the machines will make mistakes," Rosario said during training.

The destruction, ordered by Congress in 1986, entered a pilot testing phase last week that, as of Wednesday, has dismantled 80 projectiles at the Pueblo Chemical Depot, located on windswept prairie where tumbleweeds roll and antelope nibble dry grass.

Full-bore destruction of mustard agent cannot begin until state officials issue a permit, expected in January, project manager Rick Holmes said. And the job will be done by July 2020, Holmes said.

"We're going to make the world cleaner by having this stuff go away, and go away the right way," he said.

A 1997 international treaty ordered eradication of chemical weapons, outlawed since 1925, and the United States as an original signatory is obligated to comply. Foreign observers are posted at this plant to verify destruction of the weapons. In recent years, concerns about the delay intensified amid cybersecurity threats and evidence that Islamic State and Syrian forces have used chemical weapons.

In 2002, the Department of Defense hired the Bechtel corporation to run and close the nation's chemical weapons stockpile here, which represents about 8 percent of the nation's chemical weapons (another 2 percent are sitting in Kentucky). About 90 percent were burned.

Pentagon officials initially planned to install an incinerator in Pueblo. But Congress intervened in 1996, responding to public concerns about safety, ordering a program to demonstrate at least two alternative systems, other than incineration, for destroying chemical weapons.

Project leaders settled on the current low-temperature, low-pressure system that neutralizes the chemicals and then unleashes bacteria – from sludge imported from Pueblo's wastewater treatment plant – to eat the weapons out of existence.

No liquid waste will remain at the Pueblo Chemical Depot, and a "salt cake" sludge from filters will be hauled to a hazardous waste landfill. Emissions are filtered from a black stack above the facility.

Colorado Department of Public Health and Environment hazardous materials and waste management officials have inspected the facility to ensure safety. The pilot testing is being done under a research, development and demonstration permit, CDPHE spokeswoman Jeannine Natterman said.

The CDPHE "does not believe the Pueblo Chemical Agent Disposal Plant will have a significant impact on air quality," Natterman said in an e-mailed response to The Denver Post.

The plant "is considered only a minor source by the air pollution control division," she said. State inspectors also are "overseeing the collection of air samples from plant emission sources during pilot-testing of the facility."

Today, an estimated 2,611 tons of the mustard chemical agent is stored in projectiles and mortar cartridges buried in igloos at the 35-square-mile Pueblo Chemical Depot.

In 1952, the Army began storing mustard agent hauled here from a manufacturing plant called the Rocky Mountain Arsenal northeast of Denver. A staff of about 250 guards and maintains the weapons. Guards have detected and dealt with at least 90 leaks over 35 years.

Five of the 12-foot-tall yellow robots, run by workers at keyboards, open the projectiles packed with liquid mustard agent, which freezes at 56 degrees. The robots unscrew and remove caps on each projectile, drain the liquid into titanium containers. Robots later inject 190-degree water and sodium hydroxide. Then the bacteria from sludge is used to eat broken-down chemicals.

The project brings total employment at the Army's depot to nearly 2,000, ranking it among the largest employers on Colorado's economically lagging southern Front Range. New jobs pay $40,000 to $70,000 a year, plus health benefits.

"It means a lot," said Kurtis Wolf, 35, a union worker at the Russian-owned Evraz steel factory until that operation recently ran into trouble.

Wolf said his wife a couple months later lost her job at a dental office, jeopardizing the situation for their three children.

"Now I have a job, stable income," he said. "We'll be able to keep paying for our house, for the vehicles. … Lord willing, I hope to be one of the guys who helps close this place down."

Biggest projects still ahead after Colorado's 2013 floods

http://www.9news.com/news/biggest-projects-still-ahead-after-colorados-2013-floods/318085066

Three years have passed since it happened – since the peak of a week of weather that Coloradans had never seen in their lives.

The scale of the disaster defied description. Rivers were overrun, cities flooded.

The floods of September 2013 still don't have a name.

Photos: 2013 floods

It's been three years since the water came and left.

Since the news crews came and left.

Since the attention came and left.

Here's what we've largely missed in 2016…

This summer has been the busiest period for permanently rebuilding roads and bridges, since the floods of 2013. The single largest reconstruction project is just getting started. Most of the federal aid is still unspent.

The permanent reconstruction of Highway 36 from Lyons to Estes Park was completed this year. The permanent fix for Highway 34 from Loveland to Estes is underway, and won't be complete until 2018 or 2019.

We're finishing the summer of construction - the busiest time since the floods - as highways, roads, bridges, river banks and multi-family housing units were put in place.

You have to remember that federal grant money didn't arrive until 2014.

$350 million is promised.

$80 million of it was spent through the first half of this year.

Spending is about to ramp up. Another $40 million will be spent by year's end.

And while we talk numbers, and remember the number of lives impacted, we pause to remember the 10 lives lost in the floods three years ago this week.

Wildfire Near Kremmling Estimated At Roughly 9 Acres, 35 Percent Contained

By Jesse Paul

Denver Post, September 14, 2016

A wildfire sparked near Kremmling on Tuesday and which has prompted the evacuation of roughly a dozen homes was estimated at about nine acres on Wednesday and 35 percent contained.

A mass of resources have been called to battle the fire, including local, state and federal firefighting crews.

Lt. Dan Mayer of the Grand County Sheriff's Office says a smoke report was called in to authorities about 12:20 p.m. on Tuesday. When the chief of the Kremmling Fire Protection District went to investigate, he found that a person was burning a slash pile that had gotten out of control.

The fire is off Grand County Road 14, about five miles from Kremmling. The blaze is burning in heavy timber on county land.

Mandatory evacuations are in effect within a mile of the blaze and residents within three miles of the burn are on pre-evacuation notice.

Emergency officials seek up to $6 million to offset costs during pipeline protests

Issues Associated Press · Bismarck, N.D. · Sep 15, 2016

North Dakota emergency services officials are asking for up to $6 million from the state-owned bank to offset costs associated with help provided to law enforcement during protests against the Dakota Access pipeline.

The Bismarck Tribune reports the state Department of Emergency Services would set up a loan with the Bank of North Dakota and repay it with interest.

Emergency Services Department spokeswoman Cecily Fong says the state had never responded to large protests.

- FAQ: The Dakota Access pipeline and protest

Gov. Jack Dalrymple has also asked for federal help. The newspaper reports his office says the state has spent $1.8 million so far policing the protests.

A federal judge declined to block the four-state pipeline Friday, but federal agencies stopped work near Lake Oahe. Federal agencies also asked pipeline operator Energy Transfer Partners to voluntarily stop work on a 40-mile stretch.

FEMA-RELATED STORIES:

Fight For Zika Money Hampered By Partisan Squabbles

By Ledyard King

USA Today, September 14, 2016

WASHINGTON – Turns out Zika is as much a political quagmire as it is a health crisis.

Finger-pointing and partisan backbiting abound on Capitol Hill, despite pleas from both sides of the aisle to take the politics out of efforts to combat the disease that has infected 805 Floridians and tarnished the state’s reputation as a tourist mecca.

Just this week alone:

– Democratic congressman Alan Grayson took GOP Gov. Rick Scott to task for once proposing massive cuts in the state's mosquito control budget.

– Scott blasted the Obama administration for failing to give the state enough help to fight Zika, then accused Democratic Sen. Bill Nelson of abandoning his constituents in voting against a controversial Zika bill last week.

– The pro-choice group NARAL lashed Republican Sen. Marco Rubio for missing a bipartisan news conference on Zika to meet with GOP presidential candidate Donald Trump's running mate, Indiana Gov. Mike Pence. The organization is running online ads to highlight the criticism.

Floridians see the partisan squabbles holding up action on Zika as "one more example of a broken Washington," said Susan MacManus, a political science professor at the University of South Florida in Tampa. But she's not surprised at the stalemate or the bickering.

"This issue is arising in the middle of a very contentious, competitive election," she said. "And each party wants to take credit for the good and dis their opponent with the bad. That's what we've seen happening on the Zika issue."

Congressional leaders have reported some progress in reaching a $1.1 billion deal to fund anti-Zika efforts, including vaccine development, insect spraying and distribution of testing kits. If a compromise is reached, it's likely to be attached to a broad spending bill lawmakers will be asked to vote on at the end of the month.

Earlier Zika legislation in the Republican-controlled Congress was blocked by Democrats who objected to unrelated provisions, including barriers to contraception, the display of the Confederate flag at national cemeteries and laxer environmental standards for pesticides. The deal being discussed would not include those.

Rubio and the Democrat running against him this year, Rep. Patrick Murphy, have spent weeks blaming each other for not doing enough to end the stalemate.

They both initially backed Obama's request in February for $1.9 billion, though Rubio also has supported GOP measures that would have provided less money and included provisions Murphy and others found objectionable.

On Wednesday, NARAL pounced on Rubio's absence from the bipartisan press conference the day before, saying he was "putting his own political needs ahead of the needs of women and families in Florida."

Rubio spokesman Olivia Perez-Cubas responded that Murphy "is the only candidate to have voted against every measure to fund Zika – once again putting himself and his political aspirations before Floridians."

Rubio spent part of Tuesday and Wednesday meeting with Scott, who admonished the Obama administration for ignoring Florida.

"Since June 1, I've asked for a plan to work with (the Federal Emergency Management Agency). Haven't given it to me," the governor told reporters. "The White House has not been a good partner."

Administration officials pushed back against Scott's allegations, detailing efforts they've made to help the state:

– A Centers for Disease Control and Prevention team was recently dispatched to Florida to monitor Zika efforts.

– The Health and Human Services Department has provided more than $35 million that can be used for Zika-related activities. In August, Florida received materials for an additional 6,300 lab tests in addition to the 2,000 already provided. CDC also provided on-site technical consultation to Florida's public health laboratories, enabling them to substantially increase testing capacity.

– FEMA officials have been in contact with the state to discuss the role the agency can play, though the White House said FEMA assistance may not be the best option for a mosquito-borne disease like Zika.

"This is why the president put forward a supplemental request in February, to ensure that states like Florida would have the resources they need to effectively response to Zika," the White House spokesman said.

Grayson, the Democratic congressman from Orlando, said Scott should look in the mirror if there are fingers to be pointed.

Under the governor's watch, state aid to mosquito control programs around Florida in 2011 was sliced 40% — from $2.16 million to $1.29 million — and he vetoed a $500,000 grant that would have kept a state mosquito lab open in Panama City.

"If the governor would revisit those decisions, that would be a good start in itself," Grayson said.

Nelson was miffed that Scott singled him out for joining other Democrats in blocking the Zika bill.

"He should know better," said Nelson. "This is a serious situation, not a time for partisan politics."

Whom do voters blame? MacManus said the accusations have come in such rapid-fire, head-spinning fashion it's hard to decide who's the real culprit.

"There's enough blame to go around for all officials in the minds of Floridians," she said. "What they want is action, and there just doesn't appear to be any out of Washington. That's what they really find fault with."

Rubio tried to strike a bipartisan tone Wednesday afternoon as he spoke on the Senate floor. He defended Nelson as an important ally in the push for Zika funding, then implored his colleagues to rally around a compromise.

"We fight about so many things around here," Rubio said. "We have so many issues we could have a debate over. So let's have debates about those issues. But isn't there at least, when it comes to public health and safety, something we can say on this issue that we're not going to play politics?"

U.S. deploys robots to destroy chemical weapons buried under Colorado prairie

Share this:

By Bruce Finley | bfinley@denverpost.com
PUBLISHED: September 14, 2016 at 11:56 pm | UPDATED: September 15, 2016 at 11:01 am

PUEBLO – Destroying the nation’s stash of World War II-era chemical weapons is nasty work, and after decades of delays, the Army is using robots to start the job inside a $4.5 billion plant on the Colorado prairie.

A newly trained human workforce of 1,400 controls the robotic machinery — one canary-yellow, long-armed device is dubbed Inga, another Igor — beginning a mission of emptying 780,000 wine-bottle-shaped projectiles inside sealed chambers behind 24-inch-thick blast walls. The process minimizes human contact with deadly chemicals known as mustard agent, which was used to deny enemies access to land by attacking their eyes, skin and lungs.

“I like the work. This stuff has been sitting around 40, 50 years. It’s about time we got to destroying it,” said Jose Rosario, 33, an Army war veteran who in Iraq found a stash of Saddam Hussein’s weapons.

Joe Amon, The Denver Post
Instrumentation technician Philip Kell washes down his partner Eric Irvinin wash down area at the Pueblo Chemical agent Pilot plant training area on Sept. 14, 2016 in Pueblo.

“These robots were built for precision, all computer programmed. I don’t have any worries that the machines will make mistakes,” Rosario said during training.

The destruction, ordered by Congress in 1986, entered a pilot testing phase last week that, as of Wednesday, has dismantled 80 projectiles at the Pueblo Chemical Depot, located on windswept prairie where tumbleweeds roll and antelope nibble dry grass.

Full-bore destruction of mustard agent cannot begin until state officials issue a permit, expected in January, project manager Rick Holmes said. And the job will be done by July 2020, Holmes said.

“We’re going to make the world cleaner by having this stuff go away, and go away the right way,” he said.

A 1997 international treaty ordered eradication of chemical weapons, outlawed since 1925, and the United States as an original signatory is obligated to comply. Foreign observers are posted at this plant to verify destruction of the weapons. In recent years, concerns about the delay intensified amid cybersecurity threats and evidence that Islamic State and Syrian forces have used chemical weapons.

In 2002, the Department of Defense hired the Bechtel corporation to run and close the nation’s chemical weapons stockpile here, which represents about 8 percent of the nation’s chemical weapons (another 2 percent are sitting in Kentucky). About 90 percent were burned.

Pentagon officials initially planned to install an incinerator in Pueblo. But Congress intervened in 1996, responding to public concerns about safety, ordering a program to demonstrate at least two alternative systems, other than incineration, for destroying chemical weapons.

Project leaders settled on the current low-temperature, low-pressure system that neutralizes the chemicals and then unleashes bacteria – from sludge imported from Pueblo’s wastewater treatment plant – to eat the weapons out of existence.

No liquid waste will remain at the Pueblo Chemical Depot, and a “salt cake” sludge from filters will be hauled to a hazardous waste landfill. Emissions are filtered from a black stack above the facility.

Colorado Department of Public Health and Environment hazardous materials and waste management officials have inspected the facility to ensure safety. The pilot testing is being done under a research, development and demonstration permit, CDPHE spokeswoman Jeannine Natterman said.

The CDPHE “does not believe the Pueblo Chemical Agent Disposal Plant will have a significant impact on air quality,” Natterman said in an e-mailed response to The Denver Post.

The plant “is considered only a minor source by the air pollution control division,” she said. State inspectors also are “overseeing the collection of air samples from plant emission sources during pilot-testing of the facility.”

Today, an estimated 2,611 tons of the mustard chemical agent is stored in projectiles and mortar cartridges buried in igloos at the 35-square-mile Pueblo Chemical Depot.

Zinke, Tester Help Unveil New Helena Fire Engines

KTVH-TV Helena (MT), October 27, 2016

HELENA – The Helena Fire Department unveiled its newest equipment Wednesday, with help from two of the state's top elected representatives.

The two new fire engines were delivered on Tuesday. Sen. Jon Tester and Rep. Ryan Zinke both got a look at the vehicles while visiting Fire Station #1.

The new pumpers will replace Helena's current engines, one from 1995 and one from 2005. All together, they cost just under $1 million. Helena Fire Chief Mark Emert says support from Zinke, Tester and Sen. Steve Daines was key to securing a FEMA grant to help pay for the equipment.

"The fire department's great, the firemen themselves dedicated," said Zinke after his tour. "But it's great to see them have the right equipment, the right training, the right mission focus to get the job done, and I think Helena ought to be proud of this department."

Emert says the new engines could be operational by the middle of November.

The 1995 engine will become a backup for the department, while the 2005 vehicle will be sold.

NORTH DAKOTA:

Moorhead mayor says Dayton wants to continue talks despite opposing F-M diversion

By Tu-Uyen Tran on Oct 26, 2016 at 6:16 p.m.

MOORHEAD — When Mayor Del Rae Williams met with Gov. Mark Dayton in St. Paul Tuesday Oct. 25, she said she walked him through several maps showing the effect of a 100-year flood on the city.

One shows how the city would look with sandbagging in place and one shows how it would look if the sandbags are breached.

It's not just along the Red River, but also inland, she said. Concordia College and Minnesota State University Moorhead would be affected, as would the area between them where she happens to live, she said.

The Minnesota Department of Natural Resources has denied a permit application for a dam that's part of the Fargo-Moorhead flood diversion and Williams' task, as a member of the Diversion Authority, was to help avoid a deadlock. With her were City Engineer Bob Zimmerman, Rep. Ben Lien, DFL-Moorhead, Sen. Kent Eken, DFL-Twin Valley, and lobbyists for the Diversion Authority.

Dayton was joined by his staff and DNR Commissioner Tom Landwehr.

"It was worthwhile to go down, but it's clear we still have some work to do," Williams said Wednesday Oct. 26.

The governor's spokesman said in a statement that the governor had a "very cordial and constructive meeting" with Lien, Eken, city leaders and the DNR. He said Dayton thanked the two lawmakers for "their leadership in starting this constructive conversation."

The Diversion Authority has until Wednesday, Nov. 2, to decide whether to appeal the DNR's decision.

Moorhead City Attorney John Shockley, who's also an attorney for the Diversion Authority, said his understanding is the decision was on the "permitability" of the dam — meaning can it actually get a permit — rather than the permit itself since no dam design has been submitted.

Focus on Minnesota

The DNR announced on Oct. 3 that it would deny the permit in part because it believes new dikes and emergency measures, such as sandbagging, are good enough, to the dismay of many local officials who have experienced desperate flood fights in the recent past. In a statement released the same day, Dayton said he supports the decision because the dam would flood a larger area in Minnesota than in North Dakota, but protect a smaller area.

For Williams, that small area includes 820 Moorhead homes, which she said might not seem like much compared to the thousands of homes at risk in Fargo, but "820 homes is a considerable amount of homes really."

"It's important to talk in terms of how it affects Minnesota land because that's his purview," she said.

Williams also suggested the DNR and Diversion Authority staff create a working group that would meet monthly to clarify their differences. She said she hopes they'll find a way to "tweak" the project in a way that would satisfy the DNR.

"We could tell that we had different viewpoints on certain things that weren't going to be resolved in this short little meeting," she said. "But the governor was very much up for continuing conversation about it, continuing to talk."

She said she didn't get an immediate response to her work-group proposal, but expected the DNR would need time to decide.

Council divided

Moorhead city leaders back some form of permanent flood protection, but support for the diversion project is mixed. The City Council on Monday, Oct. 24, voted 8-0 to approve a resolution in support of "permanent flood protection" by working with the Diversion Authority and the U.S. Army Corps of Engineers. It also said that "emergency measures, including sandbagging, are an insufficient means to continue fighting spring and summer flood events and are not a workable solution for residents in the long term."

But other than the name of the Diversion Authority, it didn't mention support for the diversion.

Council member Heidi Durand said she and council members Mari Daley and Chuck Hendrickson asked that references to the diversion be replaced with "permanent flood protection" because they supported the latter but not the former. She has long opposed the diversion because it shifts the impact from the city to property owners who wouldn't now get flooded.

However, the only project the corps and the Diversion Authority is committed to is the diversion and several other commissioners expressed strong support for the project during discussion of the resolution on Oct. 11.

Council member Brenda Elmer said it's "outrageous" to expect Moorhead to rely on emergency measures. She also reminded colleagues that even if there isn't a flood anytime soon, the Federal Emergency Management Agency has said it will change the flood plain map to reflect new risks and many residents will have to pay much higher rates for flood insurance.

FEMA-RELATED STORIES:

Hurricane Intensity Is Not Exaggerated To Scare People, And Here's How We Know

By Phil Klotzbach

Washington Post, October 26, 2016

Hurricane Matthew brushed the East Coast as a Category 4 in early October. It scoured the Florida coast with a storm surge that washed out roads and flooded homes and businesses. It dumped over a foot of rain on the Carolinas and triggered deadly flooding. And before all of this, Matthew devastated Haiti and killed at least 600 people — it's possible we'll never know the final death toll.

But the hurricane's deadly encounter with Haiti and multibillion-dollar brush with the East Coast wasn't bad enough for some people — mainly, Matt Drudge, a political commentator and news aggregator, who tweeted skepticism about Matthew's actual intensity as it barreled toward Florida. Perhaps, he suggested, the National Hurricane Center was overhyping the storm's maximum winds.

Drudge deletes his tweets regularly, so here's a screenshot from the morning of Oct. 7:

"The deplorables are starting to wonder if govt has been lying to them about Hurricane Matthew intensity to make exaggerated point on climate," Drudge mused. ("The deplorables" refers to supporters of Republican presidential nominee Donald Trump.)

Then this (image saved by the BBC):

Drudge argued the point based on data from Caribbean weather stations and buoys that were not reporting winds as strong as what the National Hurricane Center used in its advisories. But the National Hurricane Center uses a lot of different methods to determine a hurricane's actual peak intensity, and there are some serious issues with relying simply on weather stations and buoys.

The National Hurricane Center — or NHC — uses a variety of satellite-based tools to estimate a hurricane's winds when the storm is far from land, and as the storm moves closer to land, additional devices are employed.

Hurricane Hunter aircraft are dispatched to investigate the storm in more detail. These planes measure winds both at flight-level, which is approximately 10,000 feet, as well as at the surface through the use of a device called a stepped-frequency microwave radiometer which measures radiation transmitted from the ocean surface back up to the airplane. When high winds churn up the ocean surface, the amount of microwave radiation measured is diffused compared with the amount of radiation measured when the ocean surface is calm.

NHC also utilizes devices called "dropwindsondes" that are dropped from the aircraft at about 10,000 feet and measure temperature, humidity, pressure and wind speed as they descend to the surface. When a storm nears shore, radars can also be utilized to estimate wind velocity.

All of these different measurement devices, combined with surface observations from ships and buoys, are combined to assess a storm's intensity.

There are several reasons buoys are likely to underestimate a hurricane's wind.

First, buoys utilize an eight-minute average maximum wind, and NHC uses one-minute average wind. The shorter the wind averaging time, the stronger the reported winds will be. The adjustment factor would be approximately 0.90, which means if a buoy measures 80-mph eight-minute average winds, the one-minute average wind would be about 89 mph.

A more significant bias in the buoy data is the insanely severe ocean conditions that it's reporting from. Waves in a major hurricane can be as high as 50 feet, and consequently, a buoy experiences very large crests and troughs as the hurricane passes over. When a buoy is on the crest of a wave, it is exposed to the full force of the surface winds, but when it is in the trough of a wave, it is going to be sheltered from the strongest winds. These weaker winds measured in the trough of a wave get averaged into the eight-minute averaging period measured by the buoy, which therefore gives the buoy's estimated wind speed in a hurricane a low bias.

Surface stations also have significant measurement challenges in hurricanes.

Often during strong wind speeds, the anemometers break. Storm surge can also wash away weather stations before the strongest winds come ashore.

Importantly, a hurricane's wind field is a wide swath, and the strongest winds may only be found in a small region of the hurricane. The number of surface stations in any area struck by a hurricane is likely not dense enough to accurately measure the strongest winds. For example, one 2014 study found that on average, "a single perfect anemometer experiencing a direct hit by the right side of the eyewall will underestimate the actual peak intensity by 10-20% percent. Even an unusually large number of anemometers (e.g., 3-5) experiencing direct hits by the storm together will underestimate the peak wind speeds by 5%-10%."

The number of surface weather stations reporting hurricane-force winds, even in notoriously strong United States landfalling hurricanes are surprisingly small. For example, in NHC's post-storm report on Hurricane Katrina (2005), a Category 3 hurricane on the Saffir-Simpson Wind Scale, only five surface weather stations reported sustained hurricane-force winds, with the strongest sustained hurricane-force winds reported being 86 mph. Many of the surface stations reporting the strongest winds were also flagged by NHC as being incomplete, indicating failure of the station before the strongest winds likely occurred. For reference, NHC estimated Katrina's Louisiana landfall to have had maximum winds of 125 mph and its Mississippi landfall to have had maximum winds of 120 mph.

The peak winds in a hurricane are confined to a small region of the storm called the eyewall, which is the ring of thunderstorms that surround the eye. Beyond the eyewall, the wind speed drops off relatively quickly.

In the case of Hurricane Matthew, while the southeast United States suffered significant flooding damage due to both storm surge and heavy rain, the east coast of Florida dodged a huge bullet. Had Matthew tracked 50 miles farther to the west, the eyewall of the storm would have come ashore, causing much more extensive flooding as well as significant wind damage.

In any case, Matthew's strongest winds would likely not have been measured by a weather station. The National Hurricane Center provides the best analysis that science can offer.

FEMA's Flood Insurance Program Is at the Center of the Climate Change Storm

With the authorization of the program set to expire on Sept. 30, 2017, flood insurance could become a hot-button legislative issue next year.

Jeremy Dillon, CQ-Roll Call | October 18, 2016

Flood damage in Minot, N.D., in July 2011. (FEMA Photo by David Valdez)

(TNS) — As the federal government continues its disaster relief efforts after Hurricane Matthew and catastrophic flooding in Louisiana and other states, lawmakers and the Obama administration are considering how to limit the government's liability for increasingly severe natural disasters — and the solutions could include designating more places as flood-prone and encouraging residents to move out of harm's way.

At issue: The effects of climate change — more frequent flooding from torrential rains, hurricanes and other phenomena — are straining the federal flood insurance program, exposing U.S. taxpayers to a potentially growing price tag of flood relief payouts.

In the past five years, the National Flood Insurance Program, operated by the Federal Emergency Management Agency (FEMA), has taken in between $3.2 billion and $3.5 billion in premiums from its policyholders, and in most years that's more than enough to cover claims. In fiscal 2014, for example, it paid out about $372 million for claims, and its 2015 payout was approximately $839 million.

The problem arises in years with particularly powerful storms. In fiscal 2013, the agency paid out $8.2 billion mostly for damage resulting from Superstorm Sandy — well above the approximate $3.5 billion the NFIP acquired by premiums that year and enough to swamp the years in which premiums exceeded claims.

“The issues associated with adapting to climate change and making our country more resilient keep getting louder and louder,” said Brian Deese, a White House senior adviser on climate, during an event at Columbia University last week. “We know that the frequency and severity of natural disasters like hurricanes and droughts are increasing rapidly, and we need to deal with their impacts even if we succeed on the mitigation front.”

The flood insurance program is at the center of the climate change storm. And with the authorization of the program set to expire on Sept. 30, 2017, flood insurance could become a hot-button legislative issue next year.

“We are going to need to fully embed climate resilience in the way our federal agencies operate. We need to move away from this idea that you pay for rebuilding after the disaster strikes and move toward awarding resiliency efforts before the storm gets there,” Deese said. “We are going to need to have very tough conversations about things like the federal Flood Insurance Program and start to recognize what major insurance companies are recognizing, which is the 100-year flood standard is less useful when 100-year floods are occurring every five years.”

While Deese didn't say so directly, those tough choices could include some politically risky measures, such as redrawing the boundaries of flood zones, which could require more property owners to purchase flood insurance in order to qualify for mortgages.

Deese added that the federal government needs to look at “practices that expose the federal budget sheet and taxpayers to big, lingering liabilities.”

In a 2015 report, the Government Accountability Office came to the same conclusion: Losses generated by the program, as well as the potential for future losses, “have created substantial financial exposure for the federal government.” The flood program has been on GAO’s High Risk List since 2006, and the program owes $23 billion to the U.S. Treasury, according to a June report.

In a separate GAO report, issued in March, the agency said FEMA must do a better job of collecting information that would ensure that flood insurance premiums align with changes in flood risk — especially as those risks grow in areas where they historically occurred less frequently.

Zinke, Tester Help Unveil New Helena Fire Engines

KTVH-TV Helena (MT), October 27, 2016

HELENA – The Helena Fire Department unveiled its newest equipment Wednesday, with help from two of the state's top elected representatives.

The two new fire engines were delivered on Tuesday. Sen. Jon Tester and Rep. Ryan Zinke both got a look at the vehicles while visiting Fire Station #1.

The new pumpers will replace Helena's current engines, one from 1995 and one from 2005. All together, they cost just under $1 million. Helena Fire Chief Mark Emert says support from Zinke, Tester and Sen. Steve Daines was key to securing a FEMA grant to help pay for the equipment.

"The fire department's great, the firemen themselves dedicated," said Zinke after his tour. "But it's great to see them have the right equipment, the right training, the right mission focus to get the job done, and I think Helena ought to be proud of this department."

Emert says the new engines could be operational by the middle of November.

The 1995 engine will become a backup for the department, while the 2005 vehicle will be sold.

NORTH DAKOTA:

Moorhead mayor says Dayton wants to continue talks despite opposing F-M diversion

By Tu-Uyen Tran on Oct 26, 2016 at 6:16 p.m.

MOORHEAD — When Mayor Del Rae Williams met with Gov. Mark Dayton in St. Paul Tuesday Oct. 25, she said she walked him through several maps showing the effect of a 100-year flood on the city.

One shows how the city would look with sandbagging in place and one shows how it would look if the sandbags are breached.

It's not just along the Red River, but also inland, she said. Concordia College and Minnesota State University Moorhead would be affected, as would the area between them where she happens to live, she said.

The Minnesota Department of Natural Resources has denied a permit application for a dam that's part of the Fargo-Moorhead flood diversion and Williams' task, as a member of the Diversion Authority, was to help avoid a deadlock. With her were City Engineer Bob Zimmerman, Rep. Ben Lien, DFL-Moorhead, Sen. Kent Eken, DFL-Twin Valley, and lobbyists for the Diversion Authority.

Dayton was joined by his staff and DNR Commissioner Tom Landwehr.

"It was worthwhile to go down, but it's clear we still have some work to do," Williams said Wednesday Oct. 26.

The governor's spokesman said in a statement that the governor had a "very cordial and constructive meeting" with Lien, Eken, city leaders and the DNR. He said Dayton thanked the two lawmakers for "their leadership in starting this constructive conversation."

The Diversion Authority has until Wednesday, Nov. 2, to decide whether to appeal the DNR's decision.

Moorhead City Attorney John Shockley, who's also an attorney for the Diversion Authority, said his understanding is the decision was on the "permitability" of the dam — meaning can it actually get a permit — rather than the permit itself since no dam design has been submitted.

Focus on Minnesota

The DNR announced on Oct. 3 that it would deny the permit in part because it believes new dikes and emergency measures, such as sandbagging, are good enough, to the dismay of many local officials who have experienced desperate flood fights in the recent past. In a statement released the same day, Dayton said he supports the decision because the dam would flood a larger area in Minnesota than in North Dakota, but protect a smaller area.

For Williams, that small area includes 820 Moorhead homes, which she said might not seem like much compared to the thousands of homes at risk in Fargo, but "820 homes is a considerable amount of homes really."

"It's important to talk in terms of how it affects Minnesota land because that's his purview," she said.

Williams also suggested the DNR and Diversion Authority staff create a working group that would meet monthly to clarify their differences. She said she hopes they'll find a way to "tweak" the project in a way that would satisfy the DNR.

"We could tell that we had different viewpoints on certain things that weren't going to be resolved in this short little meeting," she said. "But the governor was very much up for continuing conversation about it, continuing to talk."

She said she didn't get an immediate response to her work-group proposal, but expected the DNR would need time to decide.

Wildfire Near Agate In Eastern Colorado Scorches 2,000 Acres

By Kieran Nicholson

Denver Post, August 15, 2016

A wildfire in northeastern Colorado has burned about 2,000 acres, according to firefighters.

The Basin fire is burning about four miles east of Agate in a wide ravine, said Kara Gerczynski, an Elizabeth Fire Protection District spokeswoman.

There were no reports of injuries or structures lost to the fire, Gerczynski said.

About 30 firefighters and 25 trucks were working the fire, which was first reported at about 6:30 p.m. Monday.

"It's a little hard for the crews to get down into the ravine," Gerczynski said.

The cause of the fire is under investigation.

MONTANA:

Bullock announces funding to rebuild community

AUGUST 12, 2016 BY M. CASTLEBERRY IN NEWS · 0 COMMENT

Governor Steve Bullock today announced that Federal Emergency Management Agency (FEMA) funding has been made available to the State of Montana to support recovery efforts of Fallon County in the aftermath of a severe tornado on June 11, 2016.

"The community of Baker can now get back on their feet and rebuild to become stronger and create more opportunities for future economic growth and job creation," said Governor Bullock.

On June 11, the Governor executed the State Emergency Management Plan with the activation of the State Emergency Coordination Center to a level three. A state disaster declaration was declared on July 18, 2016, with an effective date of June 9, 2016, for Fallon County.

A Joint Preliminary Damage Assessment (PDA) was requested on July 1, 2016, and conducted from July 13 to July 14, 2016. The costs of responding to the storm exceeded the capability of the State of Montana.

On July 20, Governor Bullock requested FEMA evaluate the devastating effects of the tornado and affirm the area as a major disaster eligible for a Presidential Major Disaster Declaration. Federal funding is now available on a cost-sharing basis for emergency work and the repair or replacement of facilities damaged by the severe tornado and the deposit of small and large debris into Lake Baker.

NORTH DAKOTA:

Cass County, Fargo voters will vote on diversion sales tax extensions

By Tu-Uyen Tran on Aug 15, 2016 at 8:47 p.m.

FARGO — City and county leaders have agreed to separate ballot measures extending their three sales taxes for decades to help pay for the $2.2 billion Fargo-Moorhead flood diversion.

"That will be the biggest amount of money that we'll ever vote on in the history of our lives," said Fargo City Commissioner Dave Piepkorn after joining his colleagues in a unanimous vote to put the measure on the Nov. 8 ballot.

The Cass County Commission also voted unanimously to do the same.

Together, the three sales taxes will pay for about half the project, which will protect Fargo-Moorhead from flooding on the Red River. The state and federal government has pledged enough funds for the remaining half.

The decision by the city and county commission didn't come easily though everyone agreed a sales tax extension was needed. Deliberating separately, they both agonized over language that was as restrictive as possible to win over skeptical voters.

Though both ballot measures will extend three half-cent sales taxes as late as Dec. 31, 2084, city and county leaders added language that implores their successors to pay off all debts as early as tax revenues allow. That is, they want to prevent future city and county leaders from making minimal payments and allowing surplus revenue to accrue.

County Commission Chairwoman Mary Scherling said the county paid off the jail debt early and taxpayers would want to see the same with the diversion.

Making millions

One of the reasons city and county leaders wanted these restrictions is the continuing growth of sales tax revenues, which will far exceed the annual debt payments required. By 2084, for example, the city and county are expected to collect more than $275 million a year while payments would be less than $50 million. This assumes revenue will grow 3 percent, a conservative rate compared to the actual rate of about 4 percent.

But investors don't like to buy government bonds based on money governments think they'll have but on what they have now. 2084 is how long it'll take for the city and county to pay off the debt if revenue doesn't grow at all.

Tom Rousakis, an executive with Ernst & Young who worked on the diversion financing plan, told county commissioners that it's entirely possible they'll pay off the debt by 2059 or 2061.

Cass County voters will be asked to extend the half-cent sales tax dedicated to flood control, which expires in 2031. The money is used to match city diversion funding with whatever's left — about 9 percent of the total — used for flood control elsewhere in the county, according to commissioners.

City voters will be asked to extend two half-cent sales taxes. One is dedicated to flood control and expires in 2029. Another is dedicated to both flood control and infrastructure, and expires in 2032.

City Commissioner Tony Gehrig won praise from his colleagues for proposing to have the second tax dedicated only to flood control, a move meant to assure voters the commission wouldn't try to take advantage of the revenue to pay for streets and sewers.

North Bismarck homeowners see property slipping away

- LEANN ECKROTH Bismarck Tribune

LeAnn Eckroth

Aug 14, 2016

Water from an Aug. 10 downpour caused Hay Creek to overflow and flood Pebble Creek Golf Course and a walking trail.

Homeowners along Arizona Drive are questioning the long-term safety of their houses as some backyards dropped as much as seven feet in June.

"It keeps dropping every time there is a rain," said Jim Hopfauf, one of the homeowners affected by the collapsing hill where houses are perched in north Bismarck.

Residents are pointing the blame at overland flooding of Hay Creek below their properties.

The outcome of a Braun Intertec study on the slope above Pebble Creek Golf Course will be presented at 5:15 p.m. Thursday at the Bismarck Park Board meeting at the City/County Building.

Hopfauf and homeowner David Wolf, who cringe when it rains as heavily as it did Tuesday and Wednesday nights, said they have sought help from every local government entity, including the Burleigh County Water Resource District, the Bismarck Engineering Department, city utility services and the Bismarck Park District and consulted with the state. The entities and the homeowners shared in the cost of the study.

Since Hopfauf's home was built in 2004, about one-third of the backyard has sunk with the hill along with a tree line and a walking path — all of which are tumbling into Hay Creek, he said.

The walking path has been blocked off by the Bismarck Park District because it is no longer safe. It is not caused by excess stormwater flowing down his property but by overland flooding feeding Hay Creek from the north of the city, Hopfauf said.

More development has created more pavement and fewer fields to absorb the water before it feeds Hay Creek, according to Hopfauf.

Wolf has experienced the same in the past decade.

"Nobody has come up with a plan, and nobody is spending any money on it," he said. "As homeowners, we can't do anything until the hill is stable."

The problem became serious in October 2013. Noting the park district had installed riprap on the slope, Hopfauf, Wolf and a neighbor invested $20,000 in more riprap. That, too, is failing three years later, Hopfauf said.

Hopfauf suggests that some of the Hay Creek water could be diverted from winding below the hill and further eroding it.

Michael Gunsch, advisory engineer for the Burleigh County Water Resource District, will present the findings of the study at the meeting.

"There are two parts: There is the erosion of the banks near Hay Creek and the falling slopes the landowners are dealing with. They are totally different issues," he said.

The study suggests the rip-rap landscaping the owners placed to secure their land, is actually weighing it down, said Randy Bina, executive director of the Bismarck Parks and Recreation Department.

"The sloping by the residents' homes — that slope failure — is different than what might be happening below by Hay Creek," he said.

Bina said the walking trail, built in 2000, has dropped.

"We are closing that segment of the walking path for the time-being. The two property owners will be removing the rock. After the rock is removed, we'll have to make a determination on that section of trail," he said.

"It appears significant materials were added to the upper slope during the earlier slope repair," said Dave Mayer, operations director for the park district. "They had a direct negative effect with further degraded sloping."

He said water at Pebble Creek Golf Course quickly subsides.

"It's uncommon to close the golf course, but there are days when we do not allow golf carts because the course is wet," Mayer said.

The homeowners said they have been asked to removed the rock because of the study findings. Wolf and Hopfauf said they want to donate it for any future rip-rapping work further below the slope, if it helps.

For the bank stabilization near Hay Creek, the study suggests the city and park district cooperatively seek funding for a $295,000 bank stabilization project, consisting of rock and fabric, from the state Water Commission.

The study recommends a couple of alternatives for the homeowners, Bina said.

"The first is to remove the rock and some is with reshaping the slope. The next is hiring a consultant," he said.

Dakota Access pipeline owners sue North Dakota protesters

- By JAMES MacPHERSON
- 17 hrs ago

BISMARCK, N.D. (AP) — Developers of a $3.8 billion, four-state oil pipeline sued in federal court Monday to stop protesters near an American Indian reservation in North Dakota from interfering with the project, alleging the safety of workers and law enforcement is at risk.

Dakota Access LLC filed a lawsuit against Standing Rock Sioux Tribal Chairman David Archambault II and other protesters, seeking restraining orders and unspecified monetary damages.

The protesters "have created and will continue to create a risk of bodily injury and harm to Dakota Access employees and contractors, as well as to law enforcement personnel and other individuals at the construction site," the company wrote in court papers.

Archambault was among several protesters charged last week with disorderly conduct or criminal trespass at the construction site near the Standing Rock Sioux reservation that straddles the North Dakota-South Dakota border.

The tribe sued federal regulators late last month for approving the pipeline, which will take crude oil from the Bakken oil fields in North Dakota to Illinois and cross the Missouri River just upstream of the reservation. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Dakota Access said in court papers that threats have been made to workers, and rocks and bottles have been thrown, and that Archambault excused tribal employees from work last week to protest the pipeline's construction.

Archambault told reporters Monday that he was arrested for "doing what everybody else was doing: demonstrating." He said he expected more arrests and acts of civil disobedience to continue, calling the pipeline "a black poisonous snake" that "is made from nothing but greed."

Workers accompanied by armed private security guards started construction on the project near the reservation last week.

Several sheriff's deputies and about 30 North Dakota Highway Patrol troopers were on site Monday, and the highway patrol asked motorists to avoid a state highway near the reservation because of the protests.

Texas-based Dakota Access claims the protesters are causing the company "to lose goodwill among its customers" because of delays and are "diminishing" its "opportunity to complete construction of the pipeline's water crossing before its permits expire."

SOUTH DAKOTA:

Great Plains Fire reports several fires over weekend

August 14, 2016

Gary Matthews

RAPID CITY, S.D. - The Great Plains Fire dispatch reported several wildfires over the weekend.

On Saturday, the Brady Creek Fire burned had burned over 50 acres northwest of Kadoka. Fire crews had the blaze 75-percent contained Sunday afternoon. The fire was sparked by lightning.

The Mathews County Asist Fire burned approximately 35 acres southwest of Fort Pierre on Saturday. Lightning also sparked that fire.

Two small fires were reported in northeast Wyoming as well.

On Sunday, a grass fire was reported near New Underwood Road, north of I-90. It's believed lightning sparked the fire. There was not an estimate on its size as of Sunday evening.

La Nina to replace El Nino

August 15, 2016
By Jack Taylor

SIOUX FALLS, S.D. (KELO AM) - Warming of the Pacific, or El Nino, is coming to an end and the long range prediction calls for La Nina to develop.

Acting South Dakota State Climatologist Laura Edwards says La Nina may have an impact in the fall and winter season.

Edwards says the likelihood of La Nina did go down a little bit from the prediction's center which indicates to her that it won't ben especially strong event.

She says La Nina means the Pacific will cool below normal adding that the northern plains may not take the brunt of the change.

She say the impacts in the northern plains may not be as strong as what we saw with El Nino last year.

In most La Nina years, Edwards says, our winters are colder.

But she says it doesn't have an impact on snowfall much. She says La Nina usually brings cooler than average temperatures.

Edwards says the extended forecast calls for cooler temperatures and above normal precipitation this fall.

South Dakota responds to Louisiana flooding

August 15, 2016
By Mark Russo

SIOUX FALLS, SD (KELO-AM) The Red Cross of Eastern South Dakota is sending a larger than usual contingent of volunteers to the catastrophic flooding in Louisiana.

"This is an unusually large disaster that is in need of a large response" says Executive Director Jennifer Ross.

She's sending at least seven volunteers. Two to five volunteers is a more typical response. Ross says that for Red Cross chapters in South and North Dakota combined a total of 15 volunteers are heading to the disaster. The Red Cross is also sending four emergency response vehicles.

"They're going to help assist with the relief, which means working in shelters, providing food and care and casework to the individuals who are affected by this flooding," says Ross.

At least seven people have died and some 20,000 have been rescued from the flooding.

Progress made on Wyoming wildfires, several new blazes pop up over weekend

- Updated 12 hrs ago
- CHEYENNE — Firefighters have been making progress on battling wildfires in northwest Wyoming.
  The Hunter Peak Fire in the Shoshone National Forest northwest of Cody has increased in size to about 3 square miles, but most of that was because of firefighters conducting burnouts to help contain it.

The fire is about 5 percent contained.

Firefighters have gained about 15 percent containment on another fire that is burning about 20 miles southwest of Meeteetse. The Twin Lakes Fire was reported Friday evening and is about 1,000 acres. Firefighters also are making use of burnouts to help contain it.

In Yellowstone National Park, a new fire that started Saturday on the north side the park of is being monitored along with two other remote fires. A fire between Old Faithful and West Thumb was extinguished over the weekend.

FEMA-RELATED STORIES:

Intensity of 48-hour rainstorm caught Louisiana flat-footed

By MICHAEL KUNZELMAN, MELINDA DESLATTE and REBECCA SANTANA The Associated Press
First Published Aug 15 2016 05:06PM • Last Updated Aug 15 2016 08:42 pm

Baton Rouge, La. • An act of God is how some are describing it, a catastrophic 48-hour torrent of rain that sent thousands of people in Louisiana scrambling for safety and left many wondering how a region accustomed to hurricanes could get caught off guard so badly.

At least six people have been killed and more than 20,000 have had to be rescued since Friday in some of the worst flooding the state has ever seen.

As of Monday, the rain had mostly stopped, but rivers and creeks in many areas were still dangerously bloated and new places were getting hit by flooding. More than 11,000 people were staying in shelters; a movie studio and a civic center, which usually hosts concerts and ballets, were pressed into service.

"It was an absolute act of God. We're talking about places that have literally never flooded before," said Anthony "Ace" Cox, who started a Facebook group to help collect information about where people were stranded. He was in Baton Rouge to help his parents and grandparents, who were flooded out.

"Everybody got caught off guard," he said.

Forecasters said one reason was the sheer, almost off-the-charts intensity of the storm and the difficulty of predicting how bad it would be.

Meteorologist Ken Graham of the National Weather Service's office in Slidell said forecasters alerted people days in advance of the storms. The forecasts Thursday were for 8 inches of rain, with higher totals expected in some areas. But Graham emphasized that forecasting exactly how much rain is going to fall and where is nearly impossible. "It's one thing to say we're getting set up for a lot of rain. It's another thing to say where is this going to be," he said.

Some areas, such as the town of Zachary, received more than 2 feet of rain in a 48-hour period that ended Saturday morning. Another hard-hit area, Livingston, got nearly 22 inches during the same stretch.

Graham said the odds of that much rain were 1 in 500 in some places and 1 in 1,000 in others.

Unlike during a hurricane when shelters are established well in advance by parish governments and the Red Cross when the threat becomes obvious, shelters for those driven from their homes by the flooding were set up more haphazardly by parish officials.

As the scope of the disaster became clear, churches, schools and other places opened their doors to take in evacuees. Shelters filled up so fast that some people had to sleep on the floor

Saturday night because not enough cots had arrived. And some shelters had to shut down when they, too, started to take on water.

Marc and Crystal Matherne and their three children loaded up their cars with their three dogs and drove out of their flooded Baton Rouge neighborhood Sunday before the water got too deep to pass.

"I want to blame somebody because of all the hurt that's going on, but I don't know if anybody knew" how bad the flooding would be, Crystal Matherne said. "It just seemed like a normal event for us, but it wasn't."

Volunteers have also been going out in boats — locally referred to as the "Cajun Navy" — to rescue people, supplementing the efforts of National Guardsmen, state officials and Coast Guardsmen in high-water vehicles, boats and helicopters.

Jared Serigne of St. Bernard Parish said he helped organize volunteer efforts involving roughly 70 experienced boaters who helped hundreds of people from flooded communities. He criticized government officials for closing roads, a move that prevented boats from reaching launch areas.

"You've got all of these people who hunt and fish who have more experience than the average first responder," he said.

But going out on the water carries dangers, too.

Lt. Davis Madere of the Louisiana Department of Wildlife & Fisheries, who spent days rescuing people and their animals, said the floodwaters are a potential minefield of submerged vehicles, fences and mailboxes that can trip up boats.

Above the water, he said, snakes trying to escape the deluge have been spotted in trees, and rescuers must be careful of power lines that are close overhead because the water is so high.

National Guard Col. Ed Bush said parish officials want the volunteer rescuers to coordinate more with the authorities overseeing the rescue effort.

"What they're trying to do is prevent overzealous people from getting stuck themselves. We've had a couple of examples of that," Bush said.

By The Numbers: A Look At Flooding That Ravaged Louisiana

Associated Press, August 16, 2016

BATON ROUGE, La. — A look at the deadly flooding that has ravaged Louisiana:

— 7: The number of storm-related deaths since rain began falling Friday.

— More than 20,000: The number of people who have had to be rescued from their homes as floodwaters rose.

— More than 11,000: The number of people staying in shelters.

— More than 2,000: The number of evacuees staying at a large film studio complex that has been turned into a makeshift shelter.

— More than 500: The number of pets rescued.

— 48 hours: The amount of time a torrent of rain fell across parts of south Louisiana.

— More than 2 feet: The amount of rain that fell in two days in the town of Zachary, Louisiana.

— 8 inches: The amount of rain initially forecast on Thursday, with some higher totals possible in some areas.

— 12 percent: The portion of homes in hard-hit Baton Rouge covered by flood insurance; in Lafayette, which has also been hammered, the number is 14 percent.

Wildfire Near Agate In Eastern Colorado Scorches 2,000 Acres

By Kieran Nicholson

Denver Post, August 15, 2016

A wildfire in northeastern Colorado has burned about 2,000 acres, according to firefighters.

The Basin fire is burning about four miles east of Agate in a wide ravine, said Kara Gerczynski, an Elizabeth Fire Protection District spokeswoman.

There were no reports of injuries or structures lost to the fire, Gerczynski said.

About 30 firefighters and 25 trucks were working the fire, which was first reported at about 6:30 p.m. Monday.

“It’s a little hard for the crews to get down into the ravine,” Gerczynski said.

The cause of the fire is under investigation.

MONTANA:

Bullock announces funding to rebuild community

AUGUST 12, 2016 IN NEWS ·

Governor Steve Bullock today announced that Federal Emergency Management Agency (FEMA) funding has been made available to the State of Montana to support recovery efforts of Fallon County in the aftermath of a severe tornado on June 11, 2016.

“The community of Baker can now get back on their feet and rebuild to become stronger and create more opportunities for future economic growth and job creation,” said Governor Bullock.

On June 11, the Governor executed the State Emergency Management Plan with the activation of the State Emergency Coordination Center to a level three. A state disaster declaration was declared on July 18, 2016, with an effective date of June 9, 2016, for Fallon County.

A Joint Preliminary Damage Assessment (PDA) was requested on July 1, 2016, and conducted from July 13 to July 14, 2016. The costs of responding to the storm exceeded the capability of the State of Montana.

On July 20, Governor Bullock requested FEMA evaluate the devastating effects of the tornado and affirm the area as a major disaster eligible for a Presidential Major Disaster Declaration. Federal funding is now available on a cost-sharing basis for emergency work and the repair or replacement of facilities damaged by the severe tornado and the deposit of small and large debris into Lake Baker.

NORTH DAKOTA:

Cass County, Fargo voters will vote on diversion sales tax extensions

By Tu-Uyen Tran on Aug 15, 2016 at 8:47 p.m.

FARGO — City and county leaders have agreed to separate ballot measures extending their three sales taxes for decades to help pay for the $2.2 billion Fargo-Moorhead flood diversion.

"That will be the biggest amount of money that we'll ever vote on in the history of our lives," said Fargo City Commissioner Dave Piepkorn after joining his colleagues in a unanimous vote to put the measure on the Nov. 8 ballot.

The Cass County Commission also voted unanimously to do the same.

Together, the three sales taxes will pay for about half the project, which will protect Fargo-Moorhead from flooding on the Red River. The state and federal government has pledged enough funds for the remaining half.

The decision by the city and county commission didn't come easily though everyone agreed a sales tax extension was needed. Deliberating separately, they both agonized over language that was as restrictive as possible to win over skeptical voters.

Though both ballot measures will extend three half-cent sales taxes as late as Dec. 31, 2084, city and county leaders added language that implores their successors to pay off all debts as early as tax revenues allow. That is, they want to prevent future city and county leaders from making minimal payments and allowing surplus revenue to accrue.

County Commission Chairwoman Mary Scherling said the county paid off the jail debt early and taxpayers would want to see the same with the diversion.

Making millions

One of the reasons city and county leaders wanted these restrictions is the continuing growth of sales tax revenues, which will far exceed the annual debt payments required. By 2084, for example, the city and county are expected to collect more than $275 million a year while payments would be less than $50 million. This assumes revenue will grow 3 percent, a conservative rate compared to the actual rate of about 4 percent.

But investors don't like to buy government bonds based on money governments think they'll have but on what they have now. 2084 is how long it'll take for the city and county to pay off the debt if revenue doesn't grow at all.

Tom Rousakis, an executive with Ernst & Young who worked on the diversion financing plan, told county commissioners that it's entirely possible they'll pay off the debt by 2059 or 2061.

Cass County voters will be asked to extend the half-cent sales tax dedicated to flood control, which expires in 2031. The money is used to match city diversion funding with whatever's left — about 9 percent of the total — used for flood control elsewhere in the county, according to commissioners.

City voters will be asked to extend two half-cent sales taxes. One is dedicated to flood control and expires in 2029. Another is dedicated to both flood control and infrastructure, and expires in 2032.

City Commissioner Tony Gehrig won praise from his colleagues for proposing to have the second tax dedicated only to flood control, a move meant to assure voters the commission wouldn't try to take advantage of the revenue to pay for streets and sewers.

North Bismarck homeowners see property slipping away

- LEANN ECKROTH Bismarck Tribune

Aug 14, 2016

Water from an Aug. 10 downpour caused Hay Creek to overflow and flood Pebble Creek Golf Course and a walking trail.

Homeowners along Arizona Drive are questioning the long-term safety of their houses as some backyards dropped as much as seven feet in June.

"It keeps dropping every time there is a rain," said Jim Hopfauf, one of the homeowners affected by the collapsing hill where houses are perched in north Bismarck.

Residents are pointing the blame at overland flooding of Hay Creek below their properties.

The outcome of a Braun Intertec study on the slope above Pebble Creek Golf Course will be presented at 5:15 p.m. Thursday at the Bismarck Park Board meeting at the City/County Building.

Hopfauf and homeowner David Wolf, who cringe when it rains as heavily as it did Tuesday and Wednesday nights, said they have sought help from every local government entity, including the Burleigh County Water Resource District, the Bismarck Engineering Department, city utility services and the Bismarck Park District and consulted with the state. The entities and the homeowners shared in the cost of the study.

Since Hopfauf's home was built in 2004, about one-third of the backyard has sunk with the hill along with a tree line and a walking path — all of which are tumbling into Hay Creek, he said.

The walking path has been blocked off by the Bismarck Park District because it is no longer safe. It is not caused by excess stormwater flowing down his property but by overland flooding feeding Hay Creek from the north of the city, Hopfauf said.

More development has created more pavement and fewer fields to absorb the water before it feeds Hay Creek, according to Hopfauf.

Wolf has experienced the same in the past decade.

"Nobody has come up with a plan, and nobody is spending any money on it," he said. "As homeowners, we can't do anything until the hill is stable."

The problem became serious in October 2013. Noting the park district had installed riprap on the slope, Hopfauf, Wolf and a neighbor invested $20,000 in more riprap. That, too, is failing three years later, Hopfauf said.

Hopfauf suggests that some of the Hay Creek water could be diverted from winding below the hill and further eroding it.

Michael Gunsch, advisory engineer for the Burleigh County Water Resource District, will present the findings of the study at the meeting.

"There are two parts: There is the erosion of the banks near Hay Creek and the falling slopes the landowners are dealing with. They are totally different issues," he said.

The study suggests the rip-rap landscaping the owners placed to secure their land, is actually weighing it down, said Randy Bina, executive director of the Bismarck Parks and Recreation Department.

"The sloping by the residents' homes — that slope failure — is different than what might be happening below by Hay Creek," he said.

Bina said the walking trail, built in 2000, has dropped.

"We are closing that segment of the walking path for the time-being. The two property owners will be removing the rock. After the rock is removed, we'll have to make a determination on that section of trail," he said.

"It appears significant materials were added to the upper slope during the earlier slope repair," said Dave Mayer, operations director for the park district. "They had a direct negative effect with further degraded sloping."

He said water at Pebble Creek Golf Course quickly subsides.

"It's uncommon to close the golf course, but there are days when we do not allow golf carts because the course is wet," Mayer said.

The homeowners said they have been asked to removed the rock because of the study findings. Wolf and Hopfauf said they want to donate it for any future rip-rapping work further below the slope, if it helps.

For the bank stabilization near Hay Creek, the study suggests the city and park district cooperatively seek funding for a $295,000 bank stabilization project, consisting of rock and fabric, from the state Water Commission.

The study recommends a couple of alternatives for the homeowners, Bina said.

"The first is to remove the rock and some is with reshaping the slope. The next is hiring a consultant," he said.

Dakota Access pipeline owners sue North Dakota protesters

- By JAMES MacPHERSON
- 17 hrs ago

BISMARCK, N.D. (AP) — Developers of a $3.8 billion, four-state oil pipeline sued in federal court Monday to stop protesters near an American Indian reservation in North Dakota from interfering with the project, alleging the safety of workers and law enforcement is at risk.

Dakota Access LLC filed a lawsuit against Standing Rock Sioux Tribal Chairman David Archambault II and other protesters, seeking restraining orders and unspecified monetary damages.

The protesters "have created and will continue to create a risk of bodily injury and harm to Dakota Access employees and contractors, as well as to law enforcement personnel and other individuals at the construction site," the company wrote in court papers.

Archambault was among several protesters charged last week with disorderly conduct or criminal trespass at the construction site near the Standing Rock Sioux reservation that straddles the North Dakota-South Dakota border.

The tribe sued federal regulators late last month for approving the pipeline, which will take crude oil from the Bakken oil fields in North Dakota to Illinois and cross the Missouri River just upstream of the reservation. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Dakota Access said in court papers that threats have been made to workers, and rocks and bottles have been thrown, and that Archambault excused tribal employees from work last week to protest the pipeline's construction.

Archambault told reporters Monday that he was arrested for "doing what everybody else was doing: demonstrating." He said he expected more arrests and acts of civil disobedience to continue, calling the pipeline "a black poisonous snake" that "is made from nothing but greed."

Workers accompanied by armed private security guards started construction on the project near the reservation last week.

Several sheriff's deputies and about 30 North Dakota Highway Patrol troopers were on site Monday, and the highway patrol asked motorists to avoid a state highway near the reservation because of the protests.

Texas-based Dakota Access claims the protesters are causing the company "to lose goodwill among its customers" because of delays and are "diminishing" its "opportunity to complete construction of the pipeline's water crossing before its permits expire."

Intensity of 48-hour rainstorm caught Louisiana flat-footed

By MICHAEL KUNZELMAN, MELINDA DESLATTE and REBECCA SANTANA The Associated Press
First Published Aug 15 2016 05:06PM • Last Updated Aug 15 2016 08:42 pm

Baton Rouge, La. • An act of God is how some are describing it, a catastrophic 48-hour torrent of rain that sent thousands of people in Louisiana scrambling for safety and left many wondering how a region accustomed to hurricanes could get caught off guard so badly.

At least six people have been killed and more than 20,000 have had to be rescued since Friday in some of the worst flooding the state has ever seen.

As of Monday, the rain had mostly stopped, but rivers and creeks in many areas were still dangerously bloated and new places were getting hit by flooding. More than 11,000 people were staying in shelters; a movie studio and a civic center, which usually hosts concerts and ballets, were pressed into service.

"It was an absolute act of God. We're talking about places that have literally never flooded before," said Anthony "Ace" Cox, who started a Facebook group to help collect information about where people were stranded. He was in Baton Rouge to help his parents and grandparents, who were flooded out.

"Everybody got caught off guard," he said.

Forecasters said one reason was the sheer, almost off-the-charts intensity of the storm and the difficulty of predicting how bad it would be.

Meteorologist Ken Graham of the National Weather Service's office in Slidell said forecasters alerted people days in advance of the storms. The forecasts Thursday were for 8 inches of rain, with higher totals expected in some areas. But Graham emphasized that forecasting exactly how much rain is going to fall and where is nearly impossible. "It's one thing to say we're getting set up for a lot of rain. It's another thing to say where is this going to be," he said.

Some areas, such as the town of Zachary, received more than 2 feet of rain in a 48-hour period that ended Saturday morning. Another hard-hit area, Livingston, got nearly 22 inches during the same stretch.

Graham said the odds of that much rain were 1 in 500 in some places and 1 in 1,000 in others.

Unlike during a hurricane when shelters are established well in advance by parish governments and the Red Cross when the threat becomes obvious, shelters for those driven from their homes by the flooding were set up more haphazardly by parish officials.

As the scope of the disaster became clear, churches, schools and other places opened their doors to take in evacuees. Shelters filled up so fast that some people had to sleep on the floor Saturday night because not enough cots had arrived. And some shelters had to shut down when they, too, started to take on water.

Marc and Crystal Matherne and their three children loaded up their cars with their three dogs and drove out of their flooded Baton Rouge neighborhood Sunday before the water got too deep to pass.

"I want to blame somebody because of all the hurt that's going on, but I don't know if anybody knew" how bad the flooding would be, Crystal Matherne said. "It just seemed like a normal event for us, but it wasn't."

Volunteers have also been going out in boats — locally referred to as the "Cajun Navy" — to rescue people, supplementing the efforts of National Guardsmen, state officials and Coast Guardsmen in high-water vehicles, boats and helicopters.

Jared Serigne of St. Bernard Parish said he helped organize volunteer efforts involving roughly 70 experienced boaters who helped hundreds of people from flooded communities. He criticized government officials for closing roads, a move that prevented boats from reaching launch areas.

"You've got all of these people who hunt and fish who have more experience than the average first responder," he said.

But going out on the water carries dangers, too.

Lt. Davis Madere of the Louisiana Department of Wildlife & Fisheries, who spent days rescuing people and their animals, said the floodwaters are a potential minefield of submerged vehicles, fences and mailboxes that can trip up boats.

Above the water, he said, snakes trying to escape the deluge have been spotted in trees, and rescuers must be careful of power lines that are close overhead because the water is so high.

National Guard Col. Ed Bush said parish officials want the volunteer rescuers to coordinate more with the authorities overseeing the rescue effort.

"What they're trying to do is prevent overzealous people from getting stuck themselves. We've had a couple of examples of that," Bush said.

By The Numbers: A Look At Flooding That Ravaged Louisiana

Associated Press, August 16, 2016

BATON ROUGE, La. — A look at the deadly flooding that has ravaged Louisiana:

— 7: The number of storm-related deaths since rain began falling Friday.

— More than 20,000: The number of people who have had to be rescued from their homes as floodwaters rose.

— More than 11,000: The number of people staying in shelters.

— More than 2,000: The number of evacuees staying at a large film studio complex that has been turned into a makeshift shelter.

— More than 500: The number of pets rescued.

— 48 hours: The amount of time a torrent of rain fell across parts of south Louisiana.

— More than 2 feet: The amount of rain that fell in two days in the town of Zachary, Louisiana.

— 8 inches: The amount of rain initially forecast on Thursday, with some higher totals possible in some areas.

— 12 percent: The portion of homes in hard-hit Baton Rouge covered by flood insurance; in Lafayette, which has also been hammered, the number is 14 percent.

Subject: Short update on OST

This weekend could likely be a very continuous weekend up in the Bismarck, Mandan and Standing Rock area.

- Tomorrow Federal court is expected to make a decision about whether to block construction of the pipeline. The Tribe has challenged the USACE decision to grant the permit to the pipeline company.
- This weekend in the United Tribes Technical Collage International Powwow in Bismarck. This is typically a huge event. Many of the tribes who have written support for or are part of the protest at Standing Rock are on the board of directors. This year's theme is *Empowerment Though Unity*.
- Yesterday and today the Tribal Leaders Summit is taking place, this is always happened before the Powwow. There has been a lot of discussion at the meeting about the Pipeline and the protest.
- **The Governor of ND has activated (although no a full mobilization) the National Guard as backup for law enforcement in anticipation of the ruling.**
- There are ongoing reports of violence on both sides,
- The chairman has issued a statement calling for peace.

Gov. Dalrymple calls on ND National Guard to assist with Dakota Access Pipeline protest security

http://www.kfyrtv.com/content/news/Gov-Dalrymple-calls-on-ND-National-Guard-to-assist-with-Dakota-Access-Pipeline-protest-security-392768331.html

BISMARCK, N.D.- Gov. Jack Dalrymple announced Thursday that the Morton County Sheriff's Department will receive help from the North Dakota National Guard as well as sheriff's officers throughout the state to help deal with the ongoing protest of the Dakota Access Pipeline.

Maj. Gen. Alan Dohrmann says this is not a full mobilization.

He says the National Guard personnel will serve in administrative, assistant role, deferring to the sheriff's department. He also says guardsmen will be stationed at traffic check points and will likely be armed the same as highway patrol.

National guardsmen are coming from Bismarck, Mayville and Fargo. They have law enforcement background but are not peace officers.

Morton County Sheriff Kyle Kirchmeir says his office has received reports of people intimidating residents in a variety of ways including playing "chicken" with drivers on County roads which has lead to increased patrols.

Standing Rock Chairman David Archambault II also released the following statement Thursday calling for peace in anticipation of the Sept. 9 court ruling:

Thousands of people, from members of the Standing Rock Sioux Tribe, tribes across the nation and First Nations in Canada, to non-Native supporters in the United States and around the world, have stood in solidarity against the harm and destruction caused by the Dakota Access Pipeline.

We have stood side by side in peaceful prayer.

The pipeline threatens our sacred lands and the health of 17 million people who rely upon the Missouri River for water. There is a lot at stake with the court decision tomorrow. We call upon all water protectors to greet any decision with peace and order. Even if the outcome of the court's ruling is not in our favor, we will continue to explore every lawful option and fight against the construction of the pipeline.

Any act of violence hurts our cause and is not welcome here. We invite all supporters to join us in prayer that, ultimately, the right decision—the moral decision—is made to protect our people, our sacred places, our land and our resources.

The ruling will decide whether construction can continue on the Dakota Access Pipeline.

North Dakota governor asks for National Guard assistance in pipeline protest

By Forum News Service Today at 12:52 p.m. http://www.inforum.com/news/north-dakota/4110814-north-dakota-governor-asks-national-guard-assistance-pipeline-protest

Tom Stromme/Bismarck Tribune

MANDAN, N.D. -- Gov. Jack Dalrymple said he has asked the North Dakota National Guard for support in responding to law enforcement efforts at the Dakota Access Pipeline protest site south of Mandan.

The announcement came during a news conference Thursday, Sept. 8.

“Because of the increased and prolonged need for law enforcement resources, I have asked General (Al) Dohrman to make available some North Dakota National Guard personnel to support law enforcement and augment their public safety efforts,” Dalrymple said.

- Complete archive of Dakota Access Pipeline coverage

The governor said National Guard members will serve in administrative capacities and help provide security at traffic points.

“I have also placed additional Guardsmen on standby alert in the event they are needed to assist with response efforts,” Dalrymple said.

The move comes in advance of an expected ruling by Friday on the Standing Rock Sioux Tribe’s request for an emergency injunction to halt construction of the pipeline, which will cross the Missouri River less than a mile north of the Standing Rock reservation. The tribe fears the pipeline will leak and contaminate its water supply and sacred sites, and its lawsuit claims the corps failed to consider the historical and cultural significance of that area.

- Wetterling case gives another MN family hope son will be found

Previously, Jeff Zent, a spokesman for Dalrymple, said plans were under way for additional law enforcement officers in the Bismarck-Mandan area and enhanced patrols in Morton County, where hundreds of protesters are camped out near a pipeline construction site along Highway 1806 about 35 miles south of Mandan.

Thirty-seven people have been arrested on charges including preventing arrest, disorderly conduct and criminal trespass in connection with protests at pipeline construction sites in Morton County that began in mid-August.

Significant Earthquake – New Zealand

Situation

- M7.8; Modified Mercalli Intensity (MMI): VII - 6:02 a.m. EST, Nov 13 (1:02 a.m. NZST, Nov 14); approximately 58 miles North of Christchurch
- Multiple aftershocks occurred
- Population of approximately 390,000 were exposed to strong shaking; 5,000 to very strong shaking
- Orange PAGER for economic losses, significant damage likely
- Green PAGER for shaking related fatalities; low likelihood of casualties
- LOCAL Tsunami threat issued for east coast of NZ; Tsunami wave struck Kaikoura with wave heights of 5-8ft
- No tsunami threat for U.S. Territories

Impacts

- Evacuated residents near coast allowed to return to their homes
- Two fatalities/multiple injuries reported by media
- Damaged buildings & structures reported from Christchurch to Kaikoura
- Widespread power outages reported

Response

- NZ Civil Defense Authority continues to issue updates and warnings
- Local States of Emergency issued
- FEMA Region IX remains at Normal Operations; RWC continues to monitor
- Government of New Zealand has not requested International Assistance; no US Disaster Declaration expected *(USAID)*

Significant Activity – Nov 13-14

FEMA

Significant Events:
- M7.8 – New Zealand
- Wildfires North Carolina, South Carolina & Tennessee

Tropical Activity:
- Atlantic – Tropical cyclone activity is not expected during the next 48 hours; Disturbance (5-Day outlook)
- Eastern Pacific – Disturbance 1- Low (0%)
- Central Pacific – No tropical cyclones expected through Monday evening
- Western Pacific – No activity affecting U.S. territories

Significant Weather:
- Red Flags Warnings/Critical Fire Weather areas – None
- Space Weather – Past 24 hours: no space weather storms observed; next 24 hours: no space weather storms predicted

Declaration Activity: FMAG approved for Pinnacle Mountain Fire, Pickens County, SC

NOAA Region VIII Weekly Outlook

Today-Wednesday

- **Critical fire weather conditions will continue across eastern CO through this evening. Ongoing fires will have the potential to continue to grow quickly**
- **A marginal risk for severe thunderstorms exists across E SD this afternoon. Primary threats will be gusty winds and large hail**
- **Strong winds will continue across southern portions of WY which could result in impacts to transportation along Interstates 25 and 80**
- **Periods of valley rain and mountain snow will continue through mid-week across portions of the Intermountain West and Northern Rockies**
  - **Impacts to travel across mountain passes are possible but should lessen after tomorrow**

Thursday-Sunday

- **A ridge of high pressure is expected to build across the area late in the week and into the weekend keeping the threat for widespread impactful weather low**

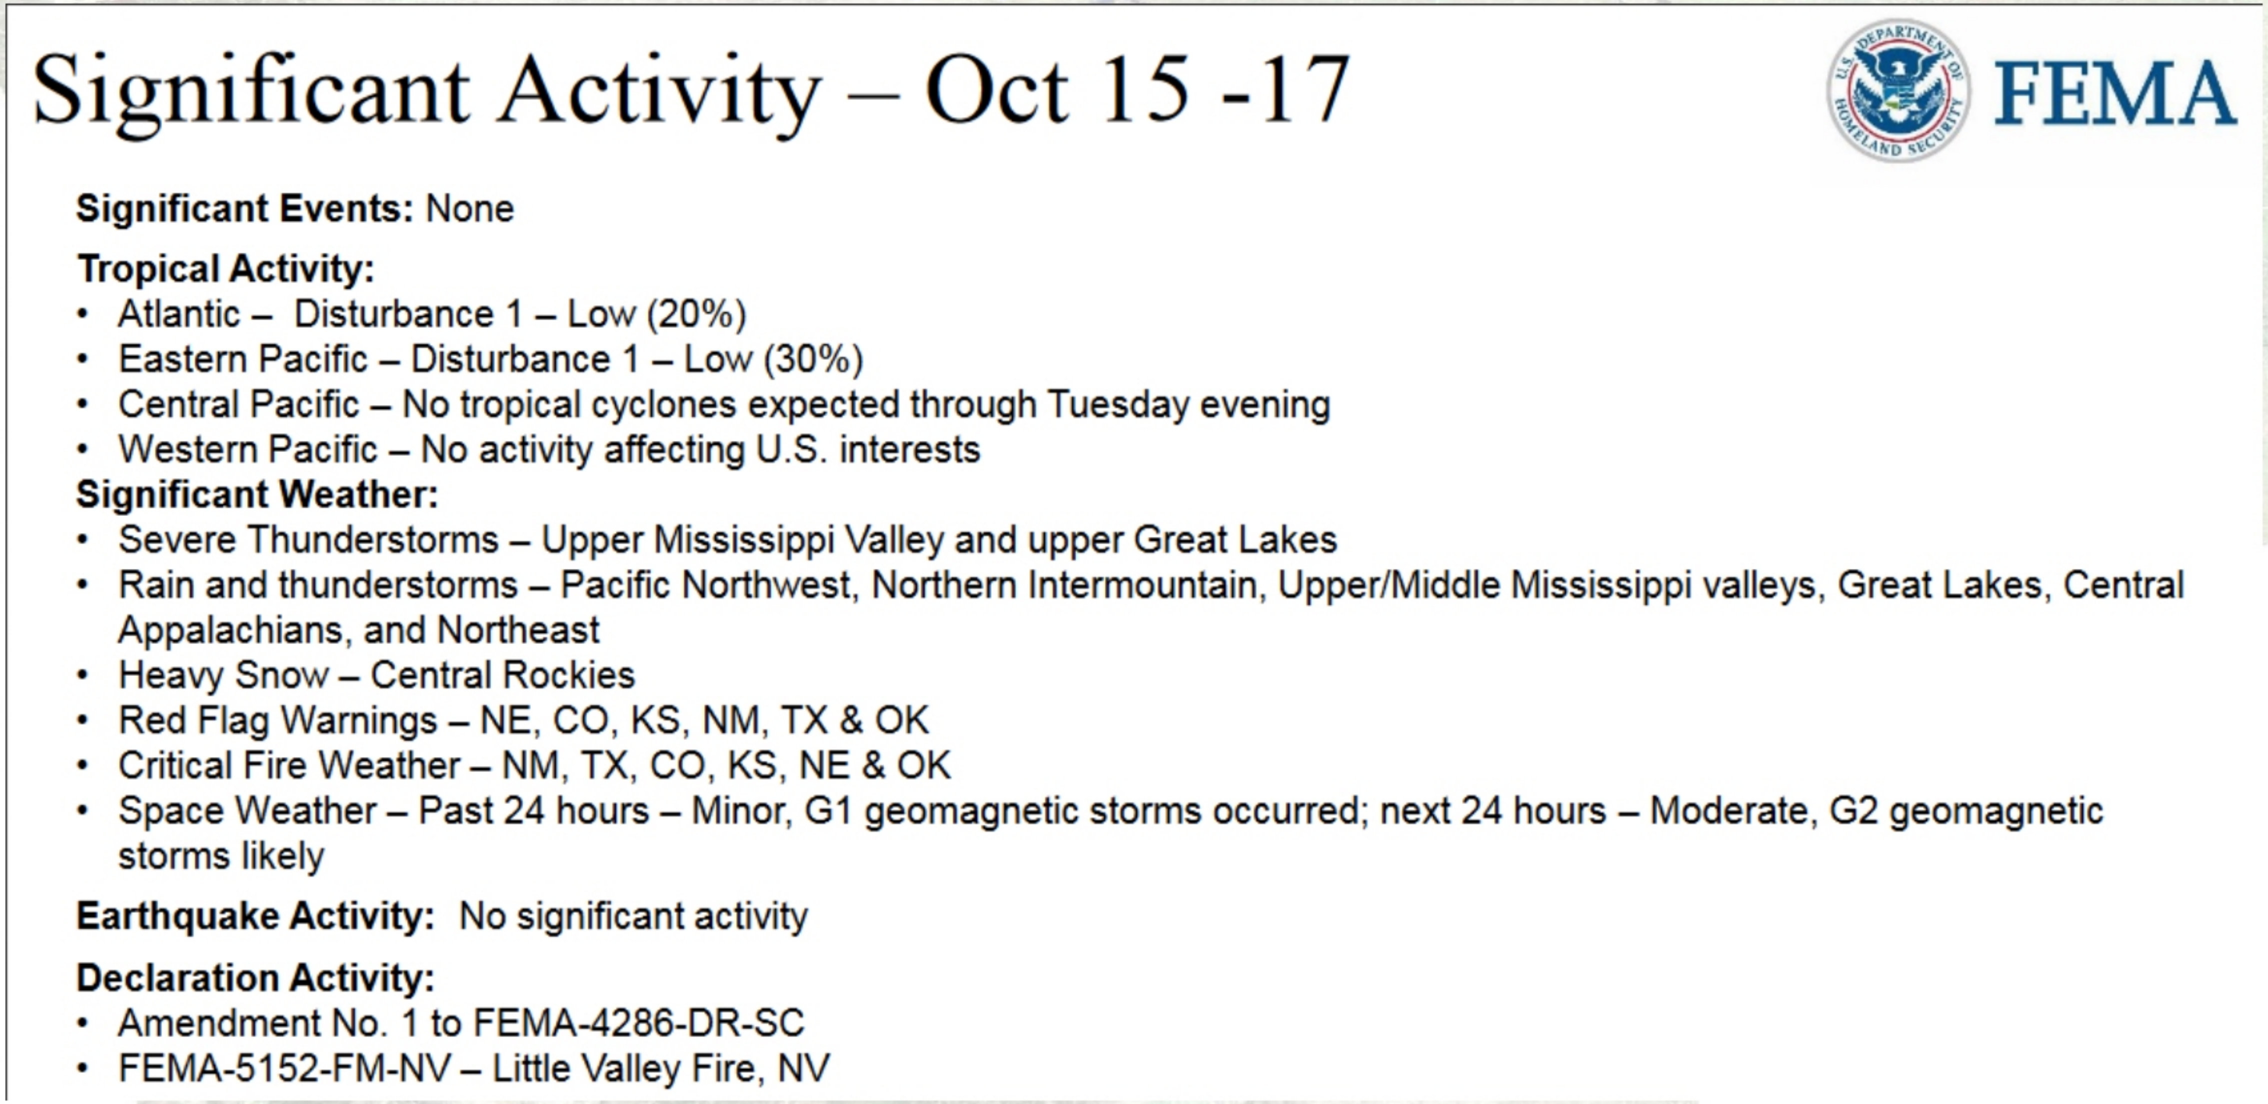
Significant Activity



Significant Activity – Oct 15 -17

FEMA

Significant Events: None

Tropical Activity:
- Atlantic – Disturbance 1 – Low (20%)
- Eastern Pacific – Disturbance 1 – Low (30%)
- Central Pacific – No tropical cyclones expected through Tuesday evening
- Western Pacific – No activity affecting U.S. interests

Significant Weather:
- Severe Thunderstorms – Upper Mississippi Valley and upper Great Lakes
- Rain and thunderstorms – Pacific Northwest, Northern Intermountain, Upper/Middle Mississippi valleys, Great Lakes, Central Appalachians, and Northeast
- Heavy Snow – Central Rockies
- Red Flag Warnings – NE, CO, KS, NM, TX & OK
- Critical Fire Weather – NM, TX, CO, KS, NE & OK
- Space Weather – Past 24 hours – Minor, G1 geomagnetic storms occurred; next 24 hours – Moderate, G2 geomagnetic storms likely

Earthquake Activity: No significant activity

Declaration Activity:
- Amendment No. 1 to FEMA-4286-DR-SC
- FEMA-5152-FM-NV – Little Valley Fire, NV

NOAA Region VIII Weekly Outlook

Today-Wednesday

- Critical fire weather conditions will continue across eastern CO through this evening. Ongoing fires will have the potential to continue to grow quickly
- A marginal risk for severe thunderstorms exists across E SD this afternoon. Primary threats will be gusty winds and large hail
- Strong winds will continue across southern portions of WY which could result in impacts to transportation along Interstates 25 and 80
- Periods of valley rain and mountain snow will continue through mid-week across portions of the Intermountain West and Northern Rockies
  - Impacts to travel across mountain passes are possible but should lessen after tomorrow

Thursday-Sunday

- A ridge of high pressure is expected to build across the area late in the week and into the weekend keeping the threat for widespread impactful weather low

NOAA Region VIII Weekly Outlook

Today-Wednesday

- Critical fire weather conditions will continue across eastern CO through this evening. Ongoing fires will have the potential to continue to grow quickly
- A marginal risk for severe thunderstorms exists across E SD this afternoon. Primary threats will be gusty winds and large hail
- Strong winds will continue across southern portions of WY which could result in impacts to transportation along Interstates 25 and 80
- Periods of valley rain and mountain snow will continue through mid-week across portions of the Intermountain West and Northern Rockies
    - Impacts to travel across mountain passes are possible but should lessen after tomorrow

Thursday-Sunday

- A ridge of high pressure is expected to build across the area late in the week and into the weekend keeping the threat for widespread impactful weather low

Region VIIITHIS BRIEFING IS PREPARED BY

From: Greff, Stacie
Sent: 20 Aug 2016 21:11:54 +0000
To: Lemaitre, Rafael
Cc: DeFelice, Jerome;Floyd, Megan;Booth, Milo;Nadeau, Robert
Subject: Standing Rock - protests

Megan has been in contact with Milo about the protest just off the Standing Rock Reservation (ND/SD) relating to the pipeline. This is not our issue but we have been closely monitoring it.
CNN picked it up last night so just providing visibility. Thanks. Stacie

---

From: Floyd, Megan
Sent: Saturday, August 20, 2016 09:34 AM
To: Greff, Stacie
Subject: Standing Rock Update

Last night CNN picked up the Standing Rock protests. They printed and editorial written by the editor of Indian Country Today. The article talks about Hillary Clinton needing to do something since she has said she is committed to Native American Indian issues. Thought I would let you know since they are a national news outlet. http://www.cnn.com/2016/08/19/opinions/clinton-dakota-access-pipeline-pipeline-moya-smith/

There are also more protestors arriving today so they are growing to larger then 2,000 – reports yesterday were not correct about the camp starting to disperse – Source: Facebook

Subject: Standing Rock - Quick update

Tim asked for an update in the 9 am. This is essentially what I told everyone, but I didn't go into the same detail.

Based on media reports (Bismarck Tribune, Native News Online):

- Work on the pipeline stopped yesterday due to safety concerns.
- Last night a Federal judge ordered the protestors to not interfere with protests based on a lawsuit that was filed by Dakota Access which alleges that protestors were putting construction workers safety in danger. The judge ruled in favor of the company because "lawful assembly is the hallmark of democracy, but threats of violence aren't acceptable"
- The tribe is working with country and state officials to ensure the safety of everyone per the Country Sheriff "what we talked about at the meeting was how to de-escalate tensions between the pipeline workers and the protesters, and us, I guess. One option is to give them more land and more comfort, room for tents, water, a dumpster, that kind of thing," the sheriff said. Ideally, there would be ample room to move the hundreds of cars, pickups and enforcement vehicles off the roadway, too, he said."
- More protesters are expected to arrive today – the group yesterday was estimated at 500-600 people.

Subject: Standing Rock - Quick update

Tim asked for an update in the 9 am. This is essentially what I told everyone, but I didn't go into the same detail.

Based on media reports (Bismarck Tribune, Native News Online):

- Work on the pipeline stopped yesterday due to safety concerns.
- Last night a Federal judge ordered the protestors to not interfere with protests based on a lawsuit that was filed by Dakota Access which alleges that protestors were putting construction workers safety in danger. The judge ruled in favor of the company because "lawful assembly is the hallmark of democracy, but threats of violence aren't acceptable"
- The tribe is working with country and state officials to ensure the safety of everyone per the Country Sheriff "what we talked about at the meeting was how to de-escalate tensions between the pipeline workers and the protesters, and us, I guess. One option is to give them more land and more comfort, room for tents, water, a dumpster, that kind of thing," the sheriff said. Ideally, there would be ample room to move the hundreds of cars, pickups and enforcement vehicles off the roadway, too, he said."
- More protesters are expected to arrive today – the group yesterday was estimated at 500-600 people.

Hi Milo–

We continue to media monitor the protests at Standing Rock (we are only watching for situational awareness, no activity). The New Your Time picked up the story late yesterday and I wanted you to be aware since I know you have gotten some questions.

http://mobile.nytimes.com/2016/08/24/us/occupying-the-prairie-tensions-rise-as-tribes-move-to-block-a-pipeline.html?_r=1&referer=https%3A%2F%2Fwww.google.com%2F

Thanks

Megan

Subject: BLUF - Tribal protests in North Dakota

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

This BLUF is for situational awareness only.

The sustained protest of Dakota Access pipeline supported by the Standing Rock Sioux Tribe has now entered a third week, with conflicting reports on size, but current estimates range from 1500-2000 protesters. The protest site is located 1 mile off the reservation in neighboring Morton County, North Dakota. On Friday Aug. 19, North Dakota Governor Jack Dalrymple signed an emergency declaration, and Morton County has issued a local emergency declaration, which is expected to be extended. The state emergency declaration is primarily focused on law enforcement and traffic regulation and does not include activation of the National Guard.

Coverage of the protest also varies widely depending on the position of the covering media. After the initial arrests last week, more recent reports indicate there has been generally peaceful situation between protesters and law enforcement.

Awareness.

Police use pepper spray while arresting 83 at Dakota Access Pipeline protest

- Mike Anderson Journal staff
    -
- Updated Oct 23, 2016

Editor's note: As part of the Journal's ongoing coverage of the massive Dakota Access Pipeline protest in North Dakota, staff writer Mike Anderson has been camping in a tent near the protest site. He filed this dispatch from the scene on Saturday.

CANNON BALL, N.D. | A peaceful protest against the Dakota Access Pipeline ended in the arrests of 83 people in North Dakota on Saturday morning amid a chaotic scene in which police in riot gear used pepper spray to break up and subdue a group of 200 to 300 protesters.

It is the highest number of people arrested in a single day in North Dakota during the last several months of protest actions against the oil pipeline, bringing the total number of arrests up to 222.

Though the protesters behaved non-violently and cooperated with the police, North Dakota law enforcement officials described Saturday's events as a riot. Police have offered conflicting reports alleging that one protester either verbally threatened an officer, or tried to physically grab away a can of pepper spray, resulting in the protester and the officer both being pepper sprayed in the face.

Most, if not all, of those arrested after the 5-hour ordeal on Saturday will be charged with criminal trespass, a misdemeanor, according to Morton County Sheriff spokesperson Rob Keller. Other charges included assault on a peace officer, reckless endangerment, engaging in a riot, resisting arrest, and fleeing an officer on foot.

"It's an unlawful activity," Keller said during phone interview on Saturday afternoon. "The bottom line is it's on private property. It's posted, 'No Criminal Trespass'. It's like you're invading someone's home. Consequently, there were arrests that were made."

The arrests occurred as the protesters were marching through wide-open prairie lands along the route of the Dakota Access Pipeline west of Highway 1806 outside Cannon Ball, N.D. They hoped to get to four fellow protesters who had locked themselves to a piece of construction equipment in the early morning hours at sites where the pipeline, which is planned to be buried beneath the Missouri River, is now under construction.

A police statement said the four were arrested after they were found, "attached to the vehicle; two attached to the outside of the vehicle, one attached to the steering wheel and another whose body was outside the vehicle with his arm fed through a hole in the door and his hand was in a bucket of hardened concrete."

The call to action went through the main resistance camp around 5:20 a.m. while it was still dark and freezing cold. A man walked through the camp speaking through a megaphone.

"Wake up relatives," he said. "Wake up water protectors. Wake up land defenders. Time to wake up. Time to send our boys to the universe. Time to send our boys to the rising sun."

A convoy of vehicles formed in the camp, a prayer was held, and the assembled were instructed to behave peacefully and respectfully if they encountered police.

“I know it’s hard on the front line,” the prayer leader said in the dark. “But do not cuss, do not holler. If you see someone getting out of hand, tell them to calm down.”

Then the convoy moved out. Parking their vehicles along the highway, the protesters began hiking into the field as the sun rose a little before 8 a.m. Their path took them along a craggy dirt road near the route of the Dakota Access Pipeline on land that tribal members of the Hunkpapa Sioux of Standing Rock said is filled with sacred burial sites.

Some of the protesters remained behind as several hundred others carrying signs and banners began marching into the field, singing, praying, and burning bundles of ceremonial sage as they went.

They walked two to three miles inward when they encountered a line of more than 50 officers from multiple law enforcement agencies. Most of the officers wore riot gear, most held wooden truncheons, and some had shotguns, canisters of pepper spray, and tear gas grenade launchers in their hands. Two armored personnel carriers arrived later while a helicopter circled low overhead.

The protesters and police lines met in the middle of an open field. The protesters remained calm, playing drums and offering prayers in English and Lakota to the officers, who remained stone-faced and uncommunicative.

When the police line began to advance on the protesters, the leaders of the group instructed everyone to fall back and cooperate with the police. They were dispersing when an officer spoke over a loud-speaker from the turret of an armored vehicle.

His only words — and the only words police spoke to the protesters all morning — were, “You’re all under arrest for trespassing.”

The police continued to advance on the fleeing protesters, snatching some of the stragglers, throwing them behind their lines, and pepper-spraying several others in the face as they trod silently forward.

The police eventually surrounded the group, repeating that every one of the 200 to 300 people present would be placed under arrest. The protesters linked arms and tied bandanas to their faces as the officers pressed in, splitting the group and pressing many to the ground. Most, if not all of the men and women taken into custody, did not resist arrest.

A small group managed to retreat over the hill, a few pouring water into the eyes of friends who had been stung by pepper spray and guiding them by hand up the dirt road as they made their way back to camp.

“It was all peaceful. And then the cops showed up," said Harmony Restoule, a young Ojibwe woman from Northern Ontario, Canada. “It was really scary when the police kicked into action.”

Restoule went to the demonstration with her cousin Paige, both of whom participated in mass protests during the Idle No More movement, a grassroots campaign organized in 2012 by the indigenous peoples of Canada against perceived legislative violations of their treaty rights.

“The Canadian police never showed up in riot gear,” Paige Restoule said.

A young man from California who identified himself only as Ahkua said his friend was among the people arrested, and that the police took him after he knelt to the ground to help someone else up.

“There were a few officers who were excessively aggressive and got the others riled up,” he said. “Most cops are pretty chill.”

Saturday’s protest was one of several high profile demonstrations in the Cannon Ball area against the Dakota Access Pipeline in recent months. Police arrested celebrity Shailene Woodley along with more than 20 others on Oct. 10 along the route of the pipeline near St. Anthony, N.D. Police referred to the event as a riot and charged many people with either inciting or engaging in a riot. At the time, it was the highest total number of arrests made in a single day.

The protesters, who now number in the thousands at a main camp near Cannon Ball, want to stop the ongoing construction of the pipeline that will transport oil from the Bakken and Three Forks formations of North Dakota, through South Dakota and Iowa, into southern Illinois. The pipeline would carry 450,000 barrels per day initially and could reach 570,000 barrels a day. The total length of the pipeline across the four states would be 1,134 miles, with 271 miles in South Dakota. The company's estimated cost for the South Dakota segment is $820 million.

On Sept. 3, police and private security forces used pepper spray and dogs to drive protesters away from construction equipment.

"Today's situation clearly illustrates what we have been saying for weeks, that this protest is not peaceful or lawful," Kirchmeier said in a press-release about Saturday's events. "This protest was intentionally coordinated and planned by agitators with the specific intent to engage in illegal activities. I have repeatedly stressed that it is our job to provide safety and security for all involved in the situation at hand. This is not about the pipeline. This is not about the protesters. This is about the rule of law."

The protesters may have been peacefully dispersing on Saturday morning, Keller said, but that doesn't change the fact that they broke the law.

"That's the whole purpose of having a police line, to protect the (pipeline) property and their right to commerce," Keller said. "We are protecting the protesters too, and the ranchers as well."

When asked if she felt protected by the police, Harmony Restoule said, "No."

Subject: Pipeline update

Pipeline update:

Yesterday was a big day, Jessy Jackson arrived on site and talks between the protestors and law enforcement broke down.

- There was an article today from the Associated Press Regarding WY sending law enforcement to North Dakota: http://trib.com/news/state-and-regional/wyoming-sends-troopers-to-north-dakota-pipeline-protest/article_2972e493-0b71-5cab-9c7d-3c27fb67542e.html (full article pasted below). Pre the article both tribes in WY are opposed to sending the law enforced support.
- There was a media report yesterday that Indiana is sending law enforcement to support ND. The article references FEMA paying for the support. We have reached out to Region IV for awareness and to let them know that FEMA is not paying for any law enforcement. The article is likely referencing EMAC. http://www.theindychannel.com/news/call-6-investigators/call-6-dozens-of-indiana-officers-deployed-to-north-dakota-pipeline-dispute-but-whos-paying (full article below).
- I am hearing a lot about treaty rights on social media, this morning on NPR the Chairman of the Standing Rock Sioux talked about this land belonging to the tribes based on treaties (NPR and other media sources).
- A new encampment (the 1851 Treaty Camp) has been set up directly on the pipeline path, which is private property (KILI Radio).
- On Wed. Jessy Jackson arrived on site to speak out about the many human and civil rights violations being perpetrated by local police (Indian Country Today).
- Actor Mark Ruffalo was at Standing Rock yesterday showing his support and Leonardo DiCaprio announced today he is on his way (Indian Country Today).
- Everyone is still calling for peaceful protests (multiple media outlets).
- It is being reported there have been between 260 and 300 arrests since the protests began with most of them happening last Saturday and pepper spray being used by law enforcement (multiple media sources).
- FAA has issued temporary flight restrictions over the protest camps. Only response aircraft in support of law enforcement activity are authorized in the airspace (Bismarck Tribune).
- Negotiations broke down between protestors and law enforcement yesterday (Bismarck Tribune).
- This inforum link is to a video that shows clear frustration by law enforcement and that they do not want a confrontation. http://www.inforum.com/news/government/4145254-jesse-jackson-joins-pipeline-protest-effort-faa-issues-no-fly-restriction (InForum)

This is a particularly good story about law enforcement and what happened yesterday.

New roadblock emerges on Highway 1806 as confrontation between protesters, law enforcement looms

By Amy Dalrymple and Mike Nowatzki / Forum News Service Today at 10:22 a.m.

Dawn breaks over the Oceti Sakowin Camp Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor1 / 2

A roadblock manned by North Dakota National Guard troops blocks North Dakota Hwy. 1806 before sunrise Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor2 / 2

MORTON COUNTY, N.D. — One day after negotiations between Dakota Access Pipeline protesters and law enforcement broke down, the mood was tense but quiet Thursday, Oct. 27, as the sun rose above the resistance camps.

Above, in restricted airspace, a North Dakota Highway Patrol aircraft circled.

Cecily Fong, spokeswoman for the state's Department of Emergency Services, said medical staffing is in place should any injuries occur at the protest sites.

She said law enforcement will likely issue a warning to protesters congregating at a camp along State Highway 1806, where pipeline opponents have set up teepees and staged hay bales, logs and barbed wire to block the road, if necessary.

However, Fong said she didn't know the timing of any law enforcement action planned, and officers want protesters to leave the northern camp, which is on private property recently purchased by the pipeline's developer, Dallas-based Energy Transfer Partners.

Protesters will be encouraged to return to the southern camp on U.S. Army Corps of Engineers land.

By Thursday morning, protesters set up an additional "halfway" roadblock on Highway 1806 — between their main barricade and the frontline camp where they've promised to hold their ground.

At the halfway roadblock, pipeline opponents staged tires, plywood, sheet metal and logs — all ready to move onto the highway should law enforcement approach. The additional roadblock provides more time for those at the main camp to leave or join the protesters at the frontline camp.

Sam Wounded Knee, from Crow Creek Nation in South Dakota, spent the night at the "halfway" roadblock.

He said a plane flew overhead through the night, and it appeared two people were in the surrounding hills to the west and using flashlights to signal back and forth with the plane.

Asked if he expects violence in a confrontation, “from the police, yeah, definitely,” he said.

“All we’re trying to do is protect our people,” Wounded Knee said, adding that women and children were asked to leave the frontline camp Wednesday night. About 200 people are at the frontline camp.

With the new roadblock established by protesters, Highway 1806 has numerous staging areas, camps and road blocks stretched out over several miles, starting with an equipment staging area set up by law enforcement about a mile south of Fort Rice.

Traveling south on 1806, in succession, there is a law enforcement barricade, followed by the protesters’ main barricade, halfway roadblock, frontline camp and main camp.

On Wednesday, negotiations between pipeline opponents and law enforcement officials broke down, setting up a possible clash as hundreds of protesters vowed to hold their ground at a the frontline camp directly in the path of the four-state oil pipeline.

A contingent of law enforcement and National Guard officials met with camp representatives on Highway 1806.

Cass County Sheriff Paul Laney of Fargo, who is helping Morton County coordinate the law enforcement response, made one last plea for protesters to remove their roadblock on 1806 and abandon the roughly 200-person “frontline” camp, where teepees and tents continued to pop up on land where the pipeline is planned

“We’re here telling you this is private property and you have to leave,” Laney told camp coordinator Mekasi Camp-Horinek on Wednesday. “We don’t want a confrontation. Please stand your people down and go back to the main camp.”

Mekasi pointed at the road – “our no surrender line,” he said – and then back at the frontline camp standing in the way of the four-state, $3.8 billion oil pipeline – their “no retreat” line.

“That’s your final word?” Laney asked.

“That’s my final word,” Camp-Horinek said, walking away.

“Good day, gentleman,” Laney said, turning toward the staging area about five miles away near Fort Rice, where a mass of law enforcement and military forces has gathered.

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an “impasse.”

Kirchmeier emphasized that “the last thing we want to do is do it forcefully.”

“If we have the chance for open dialog, that’s what we want to continue,” he said.

Pipeline opponents say they’ve reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents’ rights by blocking the highway.

Wyoming sends troopers to North Dakota pipeline protest

Wyoming sends troopers to North Dakota pipeline protest

- BEN NEARY Associated Press
- Updated 11 hrs ago

- AP

Protesters set up tepees and tents Monday in southern North Dakota on property owned by the pipeline company.

CHEYENNE — Wyoming has sent six highway patrol troopers to North Dakota to help authorities deal with Indian protesters demonstrating against the construction of an oil pipeline, prompting objections Tuesday from some Wyoming Indian leaders.

Sending the troopers merely extends emergency help to another state and does not signal that Wyoming has taken a position on the pipeline controversy, Wyoming Gov. Matt Mead said.

But Dean Goggles, chairman of Northern Arapaho Business Council, called on Mead to recall the troopers immediately.

“The North Dakota tribes and tribal members from around the nation are attempting to protect both the environment and sites which have ceremonial, religious and cultural significance to the tribes,” Goggles said.

More than 100 protesters were arrested last weekend in Morton County, North Dakota, in the faceoff between protesters and Texas-based Energy Transfer Partners, developer of the four-state Dakota Access oil pipeline.

The $3.8 billion pipeline, most of which has been completed, crosses through North Dakota, South Dakota, Iowa and Illinois. Opponents worry about potential effects on drinking water on the Standing Rock Sioux Tribe’s reservation as well as harm to cultural sites.

Col. Kebin Haller of the Wyoming Highway Patrol said six troopers were sent to North Dakota on Saturday and are expected to remain there until Nov. 8.

The troopers volunteered after the governor of North Dakota declared an emergency and asked other states for law enforcement assistance, Haller said.

The six are members of the patrol's Special Services Squad who have additional training and equipment to address large crowds and civil unrest, he said. North Dakota will pay their salaries and the costs they incur while at the protest.

Mead said the decision to send Wyoming troopers happened because "a neighbor state asked for help and Wyoming answered the call."

"North Dakota asked for help from all 50 states, so Wyoming and other states responded," Mead said.

The Eastern Shoshone and Northern Arapaho tribes in Wyoming have expressed formal support for the protesters.

Jason Baldes, a member of the Eastern Shoshone Tribe and staff member at the Wind River Native Advocacy Center, accused Wyoming officials of supporting the pipeline by sending law enforcement officers to face off against protesters.

"It kind of sheds light on really who's running the show here," Baldes said. "The oil and gas industry really has the final say, and has the politicians and our elected leaders in their pockets."

Mead denied that the decision to send troopers was political.

"The Dakota Access pipeline has no impact on Wyoming, and we have not taken a stance on this issue," he said.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including

emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Greg

Understand about SHSP/LETPP. I asked Brad to check with his peers to see if other states' had reprogrammed grants to cover these types of events. Unfortunately, it sounds like even if reprogramming is possible, the pool of available funds will limit this option.

I was pleased to see the potential options regarding JAG grants and/or emergency JAG grants. I hope that proves a solution, even if a partial one.

We'll keep looking around here but to date, no other feasible solutions are coming to the fore.

Take care and stay in touch,

Regards, Nancy

Thanks Alan for the info. As far as the SHGP grants are concerned, we are a marty minimum state so we don't receive much. Unless there is chance of new or additional/supplemental funding we would be robbing Peter to pay Paul and both are already on the front line of response. Reprograming does not get us much relief.

Greg

Subject: BLUF - Standing Rock Sioux Tribal protests

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Although the State EOC is in Level IV â€" Daily Operations

NORTH DAKOTA'S
FY 2016 EMPG WORK PLAN

PROGRAM NARRATIVE

Overview of Risk Profile

North Dakota continues to be impacted by natural and technological hazards with flooding, fire, severe storms (winter and summer), droughts, cyber-security and hazardous materials as the most repetitive types of incidents. In addition North Dakota's agricultural industry represents a potential terrorist target as does its porous international border (Canada) and two military bases. Even though the oil industry has slowed down over the last several months, the impact on resources, infrastructure and the environment remains a concern. The impact of an emergency, disaster or catastrophe will vary significantly by hazard and has the potential to produce substantial consequences to critical human needs and public infrastructure.

Areas of Need

N.D. Division of Homeland Security Operations and Planning staff completed After Action Reviews and developed Improvement Plans (AAR/IPs) following various drill/tabletops, functional, and full scale exercises. Internal staff also completed analyses of plans and training program and completed the THIRA and the State Preparedness Report (SPR). This provided the foundation for recommended SEOP modifications, additional training needs, as well as equipment needs. In addition, major areas of improvement identified by EMAP Standards as follow:

EMF 4.1: Hazard Identification, Risk Assessment and Consequence Analysis

- Conduct required annual review and revision of the State's Threat and Hazard Identification and Risk Assessment (THIRA).
- Provide continued training and technical assistance to local/tribal jurisdictions for development and updates of Local/Tribal THIRA's.
- Provide training and technical assistance to whole community partners regarding THIRA.

EMF 4.2: Hazard Mitigation

- Enhance state, local and Tribal Mitigation Plans
    - Continue to identify trends in planning deficiencies found in local, tribal and state multi-hazard mitigation plans (MHMPs) to include risk vulnerability assessments, and mitigation strategy development.
    - Develop and implement strategy for addressing deficiencies.
    - Encourage incorporation of THIRA components/data into local, Tribal and state MHMPs.
    - Develop state level guidance designed to emphasize the importance of building code analysis.
    - Develop state level guidance to encourage involvement of historical and cultural organizations into plan development.
- Disaster Recovery Planning
    - Complete development of the state level Recovery Plan.
    - Evaluate content with stakeholders and revise accordingly.
    - Identify and develop key supporting documents to include appendices, a Master Contact List and a Recovery Resource Guide.
    - Ensure alignment of the Recovery Plan and supporting documents with the State Threat and Hazard Identification and Risk Assessment (THIRA), key elements of the National Disaster Recovery Framework (NDRF), and the Emergency Management Accreditation Program (EMAP) standards.
    - Develop guidance and provide technical assistance for local-tribal recovery plan development.

EMF 4.4: Operational Planning and Procedures

- Ongoing EAS and IPAWS implementation.
  - Ongoing implementation of the state's IPAWS software/equipment and modification of existing plans and procedures.
  - Review and approve applications for IPAWS Alerting Authority authorization.
  - Conduct IPAWS outreach, training and exercising for applicable stakeholders.
  - Evaluate and coordinate implementation at the local level, as necessary.
  - Assist during implementation and training as necessary for GIS related tasks.
  - Conduct continual GIS data management and contact database maintenance for State and Local county stakeholders using these systems.
- State Incident Management Assistance Team (IMAT) Mobilization Guide
  - Review and revise existing plans and procedures based on training/exercise improvement plans.
  - Ongoing coordination with IMAT's to evaluate and address operational, planning and resource-related gaps/shortfalls.
- Hazardous Materials
  - Ongoing outreach and coordination with appropriate stakeholders to evaluate existing roles/responsibilities and notification processes to improve. communication and coordination.
  - Coordinate continual CBRNE hazardous material spill mapping to aid in SERC planning efforts.
- State Emergency Operations Plan (SEOP)
  - Ongoing review and revision of SEOP annexes, appendices and supporting documents to more fully reflect THIRA, Core Capabilities, CPG 101 and revisions to the Response Mission Area Operations Plan (formerly the Base Plan).
  - Conduct outreach and engage the whole community.
  - Review and revise existing plans to address movement of large populations in state and out of state.
- Critical Infrastructure/Key Resources
  - Ongoing development of pre-decisional databases, based on key critical infrastructure (i.e. water, energy, food, etc.), to aid in critical decision making and prioritizing for preparedness, planning and response activities.
  - Conduct a CIKR conference/workshop for key critical infrastructure partners and stakeholders.
- Provide ongoing GIS support & products for planning purposes to agency sections and products they support.
  - SLIC
  - Operations and Planning
  - Training and Exercise
  - Recovery
  - MHMP / Critical Infrastructure

EMF 4.5: Incident Management

- Continue implementation and enhancements and modifications to WebEOC.
- Provide ongoing administration of WebEOC.
- Conduct refresher training and technical assistance, to include Resource Management and Mapper, to new and existing WebEOC users.
- Continue leveraging WebEOC during exercises and real-world events.
- Develop WebEOC during exercises and real-world events.
- Develop WebEOC training materials for WebEOC 8.0.
- Identify and secure necessary equipment/resources to ensure back up capability and resiliency for WebEOC and other critical systems.
- Provide GIS functional updates related to the WebEOC & Web Mapper as needed on a daily basis or during times of activation.

EMF 4.6: Resource Management, Mutual Aid and Logistics

- Procure and implement an agency inventory management system.
  - Develop, review and revise operational checklists and SOP's.
  - Incorporate systems into existing warehouse management activities and SEOC operations.
  - Identify, evaluate and implement, where appropriate, additional uses.
  - Provide ongoing training regarding administration and use of the system.
- Continued enhancements and modifications to WebEOC Resource Management.
  - Provide ongoing administration of WebEOC Resource Management.
  - Maintain and update private, voluntary, local/Tribal, state and federal agency resource lists.
  - Provide training and technical assistance to new and existing WebEOC users.
  - Ensure resources are typed in accordance with NIMS.
- Sustainment and enhancement of existing NDDES resources and warehouse space.
  - Acquire additional resources/equipment, if necessary, as resource gaps/shortfalls are identified.
  - Ongoing development/revision of equipment-related operational checklists, SOPs, user agreements, maintenance schedules and training materials.
  - Perform regular maintenance and make necessary repairs to ensure readiness of equipment/resource for deployment.
- Ongoing coordination with signatory states/provinces to implement Northern Emergency Management Assistance Compact (NEMAC).
  - Develop, review and modify plans/procedures for deployment of resources to another state/province.
  - Identify and address issues/concerns impacting/hindering the ability to deploy resources.
  - Participate in training and exercise activities.
- Emergency Management Assistance Compact (EMAC).
  - Review and modify plans/procedures for deployment of resources.
  - Identify and address issues/concerns impacting/hindering ability to deploy resources.
  - Participate in training and exercise activities.

EMF 4.7: Communications and Warning

- Ongoing development and revision plans and procedures outlining use of the system in relationship to the Special Needs Voluntary Registry, State Radio counties and internal NDDES notification.
- Provide ongoing training regarding administration and activation of the system(s) during exercises.
- Continue to evaluate additional potential applications of the system(s).
- Continued GIS administration of the agencies ENS systems and their users, GIS related data and monthly maintenance of each notifications systems contact records.

EMF 4.8: Facilities

- Ongoing identification and implementation of necessary modifications and enhancements to the designated Alternate Emergency Operations Center and Communications Center to ensure continuity of operations in the event the existing facility becomes inoperable.
- Development and modification of plans and procedures.
- Identify and acquire additional resources/equipment/supplies/services necessary to establish and maintain an alternate EOC and Communications Center.

EMF #4.9: Training

- Conduct HazMat Operations Course.
- Conduct Planning Section Chief Course.

- Conduct Unified Hazard Mitigation Grant Assistance Courses (L212, L213 & L214).
- Conduct Radiological/Nuclear Awareness Courses.
- Conduct CERT training courses.
- Conduct IEMC course.
- Conduct Safety Officer Course.
- Conduct Cost Benefit Analysis Entry Level Course.
- Conduct Grant Writing Course.
- Conduct Understanding the Role of your Non-Governmental Partners course.
- Conduct AHIMT Position Specific Training Logistics Section Chief Course.
- Conduct Cyber Security courses.
- Conduct Compliance to Records Management Policies course.
- Local emergency managers and their staff to complete the 4 required NIMS and 7 required Professional Development courses listed in the FY 2016 EMPG guidance.
- Completed assessment of local emergency management staff that need to complete the required courses.
- Conduct annual Training and Exercise Plan Workshop (TEPW).
- Update Multi-Year Training and Exercise Plan (TEP).
- Track and review County Multi-Year Training Plans.
- Certify ICS trainers (100, 200, 300, and 400).
- Conduct WebEOC training as needed.
- Increase position-specific IMAT training.
- Host Introduction to Emergency Services workshops for new emergency managers as well as existing emergency managers who need a refresher.
- Conduct Group Facilitation Course.
- Conduct Joint NDDES/NDEMA Workshops.
- Host Basic PIO Course.
- Host Emergency Planning Courses.
- Risk Assessment/Management and THIRA training.
- HAZMAT Conference.
- Provide training on Joint Information Center Planning.
- Wide Area Search and Rescue
- Additional courses may be identified throughout the year.
- Administer the North Dakota CERT Program.

EMF #4.10: Exercises, Evaluations, and Corrective Actions

- Conduct 22 exercises and seven full scale exercises.
  - Two Workshops
  - Seven Drills
  - Two Tabletops
  - Four Functional
- Complete After-Action Review and Improvement Plan (AAR/Plan) for each exercise.
- Conduct, as requested, drills on command post functions emphasizing unified command and ICS structures.
- Conduct IMAT exercises to keep ND IMAT teams trained.

EMF #4.11: Crisis Communications, Public Education and Information

- Educate public on systems used to gather and disseminate information to the public and first responders in order to increase public confidence and increase public willingness to comply during an actual incident.
- Evaluate PIO WebEOC boards and provide suggested revisions to the WebEOC Administrator.
- Develop and implement communications protocols integrating both the virtual Joint Information Center (JIC) and face-to-face meetings.

- Develop a protocol for and implement a WebEOC draft news release "holding pen" for review and authorization of release of information.
- Develop communications coordination procedures and protocols that combine the convenience of virtual JIC operations with the effectiveness of face-to-face communications among multiple agency PIOs responding to emergencies or disasters.
- Develop a PIO email distribution list in coordination with ITD.

Baseline Inventory

As stipulated by this grant, state level planning efforts employ the National Preparedness System to build, sustain, and deliver core capabilities to achieve the Goal of a secure and resilient Nation. Funding priorities address the gaps identified through the annual update of the THIRA and SPR. The state also takes into account the National Incident Management System (NIMS) requirements, Core Capabilities as defined in the National Preparedness Goal and the Emergency Management Accreditation Program (EMAP) standards, as appropriate.

The State Emergency Operations Plan tasks 50 state agencies to support local and tribal governments during emergencies or disasters. The Base Plan is supported by an Essential Services document listing critical services to be maintained during disaster; State Emergency Operations Center (SEOC) Guide; incident annexes; and capabilities annexes. Lead agencies are those with oversight for an annex; support agencies are responsible for tasks within an annex. The SEOP includes a crosswalk with the National Response Framework and its Emergency Support Functions.

Over the past year the following goals and objectives were accomplished:

DISASTER RECOVERY SECTION

EMF: 4.2: Hazard Mitigation

- Began training and developing user interface for the NDDES Grant Management Software (GMS).
- Finished inputting past disaster data into the GMS for all open projects in DR-1981, and all projects, whether opened or closed, from DR-4118 forward.
- Received notification from FEMA that eight (8) of our FY 2015 Pre-Disaster Mitigation (PDM) Applications were selected for further review and approval. Seven (7) of the selected applications were for Multi-Hazard Mitigation Plan Updates, which was the 1st priority for PDM funding, and one (1) was for State Management Expenses. Total approved dollar amount totals $227,596.
- Submitted the closeout packages for the remaining DR-1829 projects by the approved deadline of 11-15-2015.
- Completed updated Corrective Actions Plans for the Cities of Drayton and Grafton to address non-compliance with 44 CFR Part 80.19.
- Identified planning deficiencies and provided guidance to strengthen vulnerability assessments and mitigation strategies for Planning Teams developing/updating the following plans:
    - Bottineau County – submitted for federal review following revisions.
    - Griggs County – submitted for federal review following revisions.
    - McLean County – submitted for federal review following revisions.
    - Mercer County -- returned to emergency manager for revision.
    - Mountrail County -- submitted for federal review following revisions.
    - Stutsman County -- submitted for federal review following revisions.
- Continued efforts to encourage Planning Teams to involve historical and cultural organizations and to evaluate building codes as part of the State Review comments.
- Met with South Central Planning Council staff to discuss HMA and mitigation plans.

- Provided an overview of the hazard mitigation planning processes to the southwest Emergency Managers.
- Received approvable pending adoption status from FEMA for the following MHMPs:
    - Mountrail County
    - Pembina County
    - Stutsman County
- Finalized final approval for:
    - Barnes County
    - Ransom County
    - Foster County
    - Towner County
- Plans receiving approval by FEMA include:
    - Emmons County
    - Grand Forks County
- Plans receiving Approvable pending adoption:
    - McKenzie County
    - Sargent County
- Staff participated in a City of Bismarck aircraft accident mitigation planning meeting with the emergency manager and airport officials.
- Staff participated on a national panel to review the State of Oregon Enhanced MHMP.
- Planners conducted a presentation during the Griggs County Hazard Mitigation/LEPC meeting on March 5.
- Planners are working with local and tribal mitigation planners to develop plans with thorough vulnerability analyses and viable mitigation strategies, and ensuring compliance with other federal requirements.
- During the reporting period, the Mitigation team completed the following activities outlined in the FY 2015 EMPG Work Plan with reference to the State of North Dakota Multi-Hazard Mitigation Plan with Enhancements.
    - Developed and enacted a strategy for “Year in Review” and maintenance of the 2014 FEMA approved plan. Mitigators coordinated with agencies assigned responsibility for mitigation actions to obtain updates on activities during 2015. Staff received several suggestions to further refine the wording of actions based upon actual implementation. Information will be used in the development of a final mitigation action crosswalk.
    - Evaluated and incorporated plan review recommendations as part of continued plan updates. Staff conducted an analysis of recommendations provided by FEMA upon approval on the plan and began enactment of recommendations to include such issues as:
        - Reflecting mitigation priorities in the draft state Recovery Mission Area Operations Plan, resulting in a branch of the Recovery State Multi-Agency Coordination Center that focuses specifically on mitigation.
        - Collaborated with the State Water Commission to support the agency’s delivery of the Risk MAP program.
        - Received and evaluated feedback from local/tribal planners regarding trends in risk assessments and strategies, as well as how well the 2014 State MHMP worked as a resource for them.
        - Initiated discussion with the National Weather Service regarding the future probability and magnitude of hazards that may be affected by climate change. The NWS has agreed to join the plan Steering Committee to ensure the next MHMP reflects climate change analysis.
- Established the groundwork for incorporation of Threat and Hazard Identification and Risk Assessment (THIRA) into the plan update. Mitigators have been actively participating in the state THIRA process and plan to use the State THIRA data as part of ongoing updates to the 2014 MHMP.

- Coordinated with State MHMP partner agencies to obtain status reports on mitigation actions listed in the State of North Dakota MHMP for inclusion in the 2015 Year-in-Review.
- Participate in a regional conference call regarding recent changes to the state mitigation planning requirements.
- The Mitigation team completed the following activities to enhance Local and Tribal Mitigation Plans:
  - Identified trends in planning deficiencies found in local, tribal and state multi-hazard mitigation plans (MHMP). Deficiencies identified included inadequate vulnerability analyses for each community and strategies that lacked depth and did not relate to vulnerability analyses.
  - Developed a strategy for addressing deficiencies by providing guidance on conducting vulnerability analyses and how these analyses can be leveraged to refine mitigation strategies to more closely align to community needs. Strategy enactment encompassed site visits, co-hosting a G-318 Planning Course with FEMA and written feedback/guidance to emergency managers.
  - Evaluated and identified opportunities for incorporation of THIRA components/data into local and tribal MHMPs by coordinating with directly with emergency managers to review results of THIRAs and then working with them to include the data in hazard identification and risk assessment processes used by planning teams. As the reporting period progressed, plans submitted to the state during the reporting period reflected inclusion of THIRA data.
  - Initiated development of a Hazard Mitigation Plan toolbox that included guidance for hiring contractors and for plan development. Goals are to continue this effort as time allows. Additionally staff distributed and discussed with emergency managers the contents of the *Local Plan Review Guide*, the *Tribal Plan Review Guide* and the *Local Mitigation Planning Handbook*.

Disaster Recovery

- Completed drafts and prepared the following recovery planning documents:
  - Recovery Mission Area Operations Plan (MAOP)
  - Natural and Cultural Resources Branch Annex
  - Health and Social Services Branch Annex
  - Critical Infrastructure Branch Annex
  - Housing Branch Annex
  - Economic Recovery Branch Annex
- Hazard Mitigation Branch Annex Developed strategy for initial review of recovery documents.
- Prepared and distributed the following plans to four groups: 1) NDDES staff, 2) emergency managers, 3) FEMA staff and 4) State Multi-Agency Coordination Center (MACC).
- Evaluated suggested edits from the review teams.
- Initiated development of a State MACC contact list.
- Initiated development of a Recovery Resource List
- Developed and conducted a presentation – "Transition to Recovery" – for the EOC Management Class on November 19, 2015.
- Developed and received approval for the strategy for the L205 Local Recovery: Recovery from Disaster: the Local Government Role course, which will be held March 21-23, 2016.
- Completed webinar and test for the Emergency Management Accreditation Program (EMAP).
- During the reporting period, the Disaster Recovery Section re-evaluated the direction of recovery planning, as outlined in the EMPG Work Plan, and shifted focus to development of a state Recovery Mission Area Operations Plan, Annexes and Resource Guide. Based on these modifications, the State Recovery Planning staff completed the following activities related to Long-Term Disaster Recovery Capabilities Planning:

  - In keeping with the Work Plan, a team of 10 emergency managers are evaluating content and providing feedback on their recommendations for criteria that would assist with local/tribal recovery planning.
  - To ensure local/tribal plans align with the state disaster recovery plan, the state Recovery Mission Area Operations Plan established a recommended Local/Tribal Recovery Team framework that aligns with the State Multi-Agency Coordination Center (MACC) used to coordinate state operations. The plan also discusses integration with federal partners. The State MACC includes representation of multiple state agencies and non-governmental organizations representing voluntary agencies and private sector groups.
  - State recovery team also ensured that the State Recovery Mission Area Operations Plan reflected key NDRF capabilities by incorporating Community Planning and Capacity Building as a standard for all branches (RSFs). The Recovery team identified and developed annexes for the following branches based upon capabilities: Natural and Cultural Resources; Health and Social Services; Housing; Economic Recovery; Critical Infrastructure and Mitigation. These annexes provide guidance on how to assist local/tribal communities through recovery by outlining essential tasks and emphasizing resiliency.

Operations and Planning Section

EMF 4.1: Hazard Identification, Risk Assessment and Consequence Analysis

- Conducted engagement seminars with Whole Community partners on 12/01-03/2015 in support of State THIRA revision efforts.
- State THIRA submitted on 12/31/2015.
- Assisted local and tribal partners with completion of their THIRA Step 2 analysis, and provided feedback products for follow up and to support future Step 3 and 4 efforts.
- Provided one on one training and technical assistance to Whole Community partners on THIRA.

EMF 4.4: Operational Planning

- Continued development and update of the State Alert and Warning Plan based on recommendations by the State Emergency Communications Committee (SECC).
- Documented and distributed updated EAS monitoring assignments to the ND Broadcasters Association (NDBA) for further distribution and to the Regional Emergency Communications Committee (RECC) Chairpersons.
- Prepared and distributed 2016 EAS Required Monthly Test (RMT) schedule for Commercial Broadcasters, Local Public Safety Answering Points (PSAPs) and State Radio.
- Provided guidance to Foster County Emergency Manager for IPAWS Alert Authorization application.
- Participated in FEMA IPAWS webinar focused on best practices for Wireless Emergency Alert (WEA) alert distribution.
- Conducted Public Information and Warning course instruction as part of the November Emergency Management Seminar.
- Reviewed FEMA IPAW proposal addressing suggested changes to IPAWS alerting capabilities.
- Finalized AARs for the Valley City and Hazen IMAT exercises on July 22 and August 19, 2015.
- Conducted an IMAT notification drill utilizing the Everbridge system on December 9, 2015. The purpose of the drill was to test the conference bridge capability within the system.

- Staff met November 9, 2015, with personnel from ND Forest Service and ND National Guard to develop a training plan to build a ground fire suppression capability within the NDNG utilizing NDDES's slide in units and NDNG HUMVEES. The NDFS will conduct an information briefing for the NDNG on January 10, 2016. Red Card training is targeted for late February/early March and Engine Ops training in March, 2016.
- The NDNG will outfit one HUMVEE with a slide in unit prior to the January 10, 2016, information briefing.
- Staff met with ND Department of Health, Environmental Division, staff to review notification protocols/processes and develop a plan/mechanism to capture follow up information/updates for hazardous materials incidents. WebEOC training for key staff was conducted in October.
- Staff reviewed and made enhancements to the state's Tier II reporting process/database and disseminated information regarding updates/changes to company personnel.
- Staff modified Tier II reporting instructions and posted to the agency website.
- Under the new SEOP construct, there will no longer be a Base Plan but instead MAOPs covering Prevention/Protection, Response, and Recovery; with the State Multi Hazard Mitigation Plan fulfilling the role of the Mitigation MAOP.
- Development of the Response Mission Area Operations Plan (MAOP) and Recovery MAOP continued during the quarter. THIRA findings and the principles of the NPG are being integrated into the SEOP.
- State AMBER Alert Plan
    - The State AMBER Alert plan was activated October 24, 2015 upon request from the Fargo Police Department. The abduction was by a non-custodial parent and resulted in the safe recovery of the child. An after-action meeting was conducted on October 29, 2015 with all participating agencies, with recommended improvements added to the plan.
- Whole Community outreach occurred during the quarter, focused on determination of resource requirements to meet SEOP goals and objectives.

EMF 4.5: Incident Management

- Staff met to develop an implementation plan for WebEOC 8.0.
- In preparation of WebEOC 8.0 implementation, staff conducted a thorough review of existing users, positions and boards and identified those that are no longer applicable and necessary modifications.
- Provided WebEOC training for the following:
    - New State Radio staff
    - New NDDES Southwest Regional Coordinator
    - New Rolette County Emergency Manager
    - New Cass County Emergency Manager
    - ND Department of Health, Environmental Division, staff
- Staff met to develop a training plan for WebEOC 8.0 implementation.
- Participated in Intermedix webinars regarding new features and enhancements to building boards and navigating new and improved features within WebEOC.
- Utilized WebEOC for Foster County's Full Scale Exercise on November 13, 2015.
- Utilized WebEOC for a Tesoro Refinery exercise on November 18, 2015.
- Utilized WebEOC for the Gridex III exercise November 18-19, 2015.

EMF 4.6: Resource Management, Mutual Aid and Logistics

- Held a conference call to help explain new updates to the inventory management system.
- Discussed the continued used of the current inventory management system versus research a new system.
- Did initial research on other vendors that have inventory/maintenance management systems.
- Developed a Manual Transfer Switch SOP for building 35.

- Developed a SOP for the agencies handheld radios.
- Continued enhancement to the Command Trailer SOP.
- Continued development on the Antenna Trailer SOP.
- Staff provide maintenance to the agencies sandbag machines and pumps in preparation for 2016 spring flooding.
- Staff rotated the command trailers located in Bismarck, Fargo, and Grand Forks.
- Staff provided maintenance to the three 53' semi-trailers located in Wahpeton, Grand Forks, and Devils Lake.
- Staff reorganized and cleaned the cold storage warehouse.
- Regional coordinators continue to work with local jurisdictional response agencies to put mutual aid agreements in place. A deterrent has been FEMA regulations that allow mutual aid to be put in place up to 30 days after an event.
- Staff conducted a comparison of the EMAC Req-A and the NEMAC Req-A and identified necessary modifications; awaiting NEMAC Committee approval before implementing changes.
- Staff updated the NEMAC 24/7 contact information and distributed to member States and Provinces.
- Responsibility of updating/maintaining the NEMAC Operations Manual and Associated Appendices was rotated to Manitoba during this quarter. Staff will continue to provide input along with other members.
- Staff participated in a NEMAC Conference Call November 24, 2015.
- One staff member participated in the Understanding EMAC Course at EMI November 9-12, 2015.
- Staff facilitated the deployment of two staff through EMAC; one PA Specialist to Colorado and one PIO to South Carolina.

EMF 4.7: Communications and Warning

- Staff participated in Bank 5 radio communication training.
- EVERBRIDGE
    - Provided ND National Guard staff an overview of the Everbridge system and discussed potential use of system to notify NDNG staff. NDNG contact information was uploaded into the system and testing will occur next quarter.
- State Emergency Communications Committee (SECC)
    - Completed documentation of SECC By-Laws directing member tasks and responsibilities as SECC Regional Chairpersons. Distributed By-Laws to SECC members.
    - Facilitated initial Northeast Regional Emergency Communications Committee (RECC) meeting in Grand Forks to familiarize Commercial Broadcaster and Emergency Management participants with IPAWS requirements and State Alert and Warning Plan development.
    - Facilitated initial Southeast RECC meeting in Fargo to familiarize Commercial Broadcaster and Emergency Management participants with IPAWS requirements and State Alert and Warning Plan development.
    - Facilitated initial Southwest RECC meeting in Bismarck to familiarize Commercial Broadcaster and Emergency Management participants with IPAWS requirements and State Alert and Warning Plan development.
    - Continued development and update of the State Alert and Warning Plan based on recommendations of the SECC members.
- Participated in meeting with NDDES Leadership to determine the future of state alert and warning systems and potential vendor options to be used by the state and offered to local jurisdictions.
- Determined, scheduled and reviewed Everbridge alert, warning and notification system demo with NDDES Leadership.

EMF 4.8: Facilities

- Develop applicable checklist and SOPs.
- Identify and implement necessary modifications and enhancements to designated Alternate Emergency Operations Center to ensure continuity of operations in the event the existing SEOC facility becomes inoperable.
- Staff continues to work on installation of network switching equipment, telephones, Wi-Fi and fiber for connection to the state network at the Alternate EOC location.
- Staff met to determine Alternate EOC layout, staffing and equipment/supply requirements.

Training and Exercise Section

EMF 4.0: Training

- 100% of State staff have completed the four NIMS and the seven required Professional Development courses listed in the FY2016 EMPG FOA.

- As a whole, local emergency managers on the job more than 1 year have completed **95%** of required courses. **81%** of local emergency managers on the job more than 1 year have completed all required courses. Our new guideline for completion of the multi-year training and exercise plans requires local emergency managers to address how they will accomplish this goal. In addition, quarterly reports are sent to each county regarding their status on the EMPG requirements. We **currently** have **10** individuals that have been with the program for less than 1 year and are not included in the above percentages as we allow 1 year to meet the training requirements. **The turnover of staff has had an impact on the percentages as those that have left the program were some of the Emergency Managers that had completed all required courses. State employees (39) have completed 100 % of the required courses.**

- WebEOC training occurred on January 26, 2016 at the NDDES Mini Conference and January 27 and February 24 for the IMAT teams.

- We currently have 29 IMAT members that have attended position specific training. Four of those individuals have trained for two positions. We have also had 2 of our Team Leaders attend train the trainer courses and are beginning to schedule some of the position specific classes using our ND trainers. Planning Section Chief Class is scheduled for May 2016. No regional classes have been awarded to ND.

- Conducted annual Training and Exercise Plan Workshop (TEPW) on February 4, 2016 with 11 state agency representatives participating.

- Based on the outcome of the annual Training and Exercise Plan Workshop, our multi-year Training and Exercise Plan is being reviewed and revised.

- 2014-2017 Training and exercise plans have been approved for 54 jurisdictions (100%).

- In addition, North Dakota conducted, hosted, or participated in the following training:

NDDES Grant Writing Workshop	1/14/2015	Bismarck
L HSEEP	1/21/2015	Bismarck
ICS 300	1/21/2015	Jamestown
PER 320 Personal Protective Measures for Biological Events	1/27/2015	Bismarck

PER 320, Personal Protective Measures for Biological Events, 2nd Session	1/28/2015	Bismarck
ICS 400	2/5/2015	Jamestown
ICS 300-400	2/17/2015	Dickinson
G 271 Hazardous Weather-Floods (and Tornados)	2/25/2015	Bismarck
G0290 Basic Public Information Officer	3/17/2015	Bismarck
Joint Information Center/Joint Information Systems	3/19/2015	Bismarck
ICS 300	3/23/2015	Grand Forks
ICS 300-400	3/23/2015	Grand Forks
ICS 400	3/25/2015	Grand Forks
ICS 300-400	3/31/2015	Bismarck
ICS 300-400	4/7/2015	Minot
G191 Incident Command System/Emergency Operations Center Interface Workshop--New Rockford	4/29/2015	New Rockford
Introduction to ND Dept of Emergency Services	6/9/2015	Bismarck
ICS 300	7/9/2015	Minot
G191 Emergency Operations Center/Incident Command System Interface - Grand Forks	7/23/2015	Grand Forks
Homemade Explosives: Awareness, Recognition and Response	7/29/2015	Bismarck
G489 Management of Spontaneous Volunteers in Disaster	8/5/2015	Bismarck
AWR 232 Mass Fatalities Planning and Response for Rural Communities	8/31/2015	Bismarck
NDDES/NDEMA Conference	8/31-9/3/2015	Bismarck
G 290 Basic Public Information Officer--Jamestown	9/15/2015	Jamestown
TEEX MGT 439 Pediatric Disaster Response and Emergency preparedness Course	9/22/2015	Bismarck
ND Search and Rescue Conference	10/9/2015	Jamestown
Center for Domestic Preparedness Hazardous Materials Emergency Response	10/24/2015	Stanley
Center for Domestic Preparedness Hazardous Materials Emergency Response - Hands On	10/25/2015	Stanley
AWR-140 Radiological/Nuclear Awareness	10/27/2015	Minot
ICS 300	11/2/2015	Fargo
ICS 400	11/4/2015	Fargo
G0775 EOC Operations & Management	11/18/2015	Bismarck
Bank 5 Training Dickinson	12/8/2015	Dickinson
Bank 5 Training Williston	12/9/2015	Williston
Bank 5 Training Jamestown	12/16/2015	Jamestown
ICS 300-400	1/4/2016	Bowman
Bank 5 Bismarck	1/19/2016	Bismarck
Bank 5 Devils Lake	1/21/2016	Devils Lake

Procurement and Contracting, FEMA Public Assistance Grant Program, and FEMA Hazard Mitigation Assistance	1/25/2016	Bismarck
NDDES Mini Conference	1/25/2016	Bismarck
Group Facilitation	2/24/2016	Bismarck
Grant Writing Workshop	3/1/2016	Bismarck
MGT 418 Readiness: Training Identification Preparedness Planning	3/9/2016	Bismarck

- Conduct WebEOC training
    - WebEOC training was included in the 2016 Emergency Management Mini-Conference held January 25-26, 2016.

EMF 4.10: Exercises, Evaluations and Corrective Actions
NDDES conducted, participated, or evaluated the following exercise activities:

County	Exercise Name	Type	Date
Richland	EAS Test	Drill	4/26/2015
Bowman	Tornado - Bowman County Courthouse	Drill	4/29/2015
Logan	Tornado	Drill	4/29/2015
Pierce	Severe Summer Weather	Drill	4/29/2015

- Complete After Action Review and Improvement Plan (AAR/Plan) for each exercise
    - The AARs/IPs for exercises are completed and submitted through the HSEEP system as required.
- Conducted, as requested, drills on command post functions emphasizing unified command and ICS structures.
    - As needs were identified and requests received, the Training and Exercise Program assisted with development and delivery of exercises as appropriate.
- Conduct IMAT workshops to keep ND IMAT teams trained.
- Quarterly IMAT training and exercise events are scheduled on a recurring schedule.

EMF 4.11: Crisis Communications, Public Education and Information

- Educate public on systems used to gather and disseminate information to the public as wells first responders in order to increase public confidence and increase public willingness to comply during and actual incident.
- North Dakota provided for the following public education and information:
    - Severe Winter Weather Awareness Week with Governor's Proclamation
    - Severe Summer Weather Awareness Week with Governor's Proclamation
    - Association of Counties Convention

  - League of Cities Convention
  - Flood Preparedness Campaign
  - Summer Fire Safety Awareness Campaign
  - September 2014 – National Preparedness Month Campaign
  - Governors Severe Summer Weather Awareness Week Proclamation (April 28, 2014)
  - Summer Fire Safety Reminder (June 27, 2014)
  - September 2014 – National Preparedness Month Campaign
  - Use of Social Media (Facebook, Twitter, You Tube) in Public Awareness Campaigns.
  - Resolve to Be Ready Campaign (Every January)
- Developed and implement communications protocols integrating both the virtual Joint Information Center (JIC) and face-to-face meetings.
- Developed a protocol for and implement a WebEOC draft news release "holding pen" for review and authorization of release of information.
- Developed communications coordination procedures and protocols that combine the convenience of virtual JIC operations with the effectiveness of face-to-face. communications among multiple agency PIOs responding to emergencies or disasters.
- Developed a PIO email distribution list.

FY 2016 Emergency Management Priorities and Planning Focus

North Dakota's emergency management priorities over the next 12 to 24 months include the following specific planning, training, exercise, and equipment activities in addition to normal day-to-day workload. The State priorities are supported by the Department of Emergency Services Advisory Committee (DESAC) made up of 11 members from state, local/tribal, and non-governmental agencies statewide. The State's 3-year training and exercise plan (TEP) identifies the core capabilities that will be enhanced or sustained by the training and exercises identified in 4.9 and 4.10 below.

PLANNING FOCUS – State:

EMF #4.1: Hazard Identification, Risk Assessment and Consequence Analysis

- Conduct required annual review and revision of the State's Threat and Hazard Identification and Risk Assessment (THIRA).
- Provide continued training and technical assistance to Local/Tribal jurisdictions for development and updates of Local/Tribal THIRA's.
- Provide training and technical assistance to whole community partners regarding THIRA.

EMF 4.2: Hazard Mitigation

- Continue to identify trends in planning deficiencies found in Local, Tribal and State Multi-Hazard Mitigation Plans (MHMPs) to include risk vulnerability assessments and mitigation strategy development.
- Develop and implement a strategy for addressing deficiencies.
- Encourage incorporation of THIRA components/data into Local, Tribal and State MHMPs.
- Develop state level guidance designed to emphasize the importance of building code analysis.
- Develop state level guidance to encourage involvement of historical and cultural organizations into plan development.

Disaster Recovery Planning

- Complete development of the state level Recovery Plan.
- Evaluate content with stakeholders and revise accordingly.
- Identify and develop key supporting documents to include appendices, a Master Contact List and a Recovery Resource Guide.
- Ensure alignment of the Recovery Plan and supporting documents with the State Threat and hazard Identification and Risk Assessment (THIRA), key elements of the National Disaster Recovery Framework (NDRF), and the Emergency Management Accreditation Program (EMAP) standards.
- Develop guidance and provide technical assistance for local-tribal recovery plan development.

EMF 4.4 Operational Planning and Procedures

- Ongoing EAS and IPAWS implementation
    - Ongoing implementation of the state's IPAWS software/equipment and modification of existing plans and procedures.
    - Review and approve applications for IPAWS Alerting Authority authorization.
    - Conduct IPAWS outreach, training and exercising for applicable stakeholders.
    - Evaluate and coordinate implementation at the local level, as necessary.
    - Assist during implementation and training as necessary for GIS related tasks.
    - Conduct continual GIS data management and contact database maintenance for State and Local county stakeholders using these systems.
- State Incident Management Assistance Team (IMAT) Mobilization Guide
    - Review and revise existing plans and procedures based on training/exercise improvement plans.
    - Ongoing coordination with IMAT's to evaluate and address operational, planning and resource-related gaps/shortfalls.
- Hazardous Materials
    - Ongoing outreach and coordination with appropriate stakeholders to evaluate existing roles/responsibilities and notification processes to improve communication and coordination.
    - Coordinate continual CBRNE hazardous material spill mapping to aid SERC planning efforts.
- State Emergency Operations Plan (SEOP)
    - Ongoing review and revision of SEOP annexes, appendices and supporting documents to more fully reflect THIRA, Core Capabilities, CPG 101 and revisions to the Response Mission Area Operations Plan (formerly the Base Plan).
    - Conduct outreach and engage the whole community.
    - Review and revise existing plans to address movement of large populations in state and out of state.
- Critical Infrastructure/Key Resources (CIKR)
    - Ongoing development of pre-decisional databases, based on key critical infrastructure (i.e. water, energy, food, etc.), to aid in critical decision making and prioritizing for preparedness, planning and response activities.
    - Conduct a CIKR conference/workshop for key critical infrastructure partners and stakeholders.
- Provide ongoing GIS support & products for planning purposes to agency sections and products they support.
    - SLIC
    - Operations and Planning
    - Training and Exercise
    - Recovery
    - MHMP / Critical Infrastructure

EMF 4.5: Incident Management

- Continue implementation and enhancements and modifications to WebEOC.
- Provide ongoing administration of WebEOC.
- Conduct refresher training and technical assistance, to include Resource Management and Mapper, to new and existing WebEOC users.
- Continue leveraging WebEOC during exercises and real-world events.
- Develop WebEOC training materials for WebEOC 8.0.
- Identify and secure necessary equipment/resourses to ensure back up capability and resiliency for WebEOC and other critical systems.
- Provide GIS functional updates related to the WebEOC & Web Mapper as needed on a daily basis or during times of activation.

EMF 4.6: Resource Management, Mutual Aid and Logistics

- Procure and implement an agency inventory management system.
  - Develop, review and revise operational checklists and SOP's
  - Incorporate systems into existing warehouse management activities and SEOC operations.
  - Identify, evaluate and implement, where appropriate, additional uses.
- Continued enhancements and modifications to WebEOC Resource Management.
  - Provide ongoing administration of WebEOC Resource Management.
  - Maintain and update private, voluntary, local/tribal, state and federal agency resource lists.
  - Provide training and technical assistance to new and existing WebEOC users.
  - Ensure resources are typed in accordance with NIMS.
- Sustainment and enhancement of existing NDDES resources and warehouse space.
  - Acquire additional resources/equipment, if necessary, as resource gaps/shortfalls are identified.
  - Ongoing development/revision of equipment-related operational checklists, SOPs, user agreements, maintenance schedules and training materials.
  - Perform regular maintenance and make necessary repairs to ensure readiness of equipment/resource for deployment.
- Ongoing coordination with signatory states/provinces to implement Northern Emergency Management Assistance Compact (NEMAC).
  - Develop, review and modify plans/procedures for deployment of resources to another state/province.
  - Identify and address issues/concerns impacting/hindering ability to deploy resources.
  - Participate in training and exercise activities
- Emergency Management Assistance Compact (EMAC)
  - Review and modify plans/procedures for deployment of resources.
  - Identify and address issues/concerns impacting/hindering ability to deploy resources.
  - Participate in training and exercise activities.

EMF 4.7: Communications and Warning

- Ongoing implementation and administration of the agencies emergency notification systems.
  - Ongoing development and revision plans and procedures outline use of the system in relationship to the Special Needs Voluntary Registry, State Radio counties and internal NDDES notification.
  - Provide ongoing training regarding administration and activation of the system(s) during exercises.
  - Continue to evaluate additional potential applications of the system(s).

  - Continued GIS administration of the agencies ENS systems and their users, GIS related data and monthly maintenance of each individual notification system's contact records.

EMF 4.8: Facilities

- Ongoing identification and implementation of necessary modifications and enhancements to the designated Alternate Emergency Operations Center and Communications Center to ensure continuity of operations in the event the existing facility becomes inoperable.
- Development and modification of plans and procedures.
- Identify and acquire additional resources/equipment/supplies/services necessary to establish and maintain an alternate EOC and Communications Center.

EMF 4.11: Crisis Communications, Public Education and Information

- Educate public on systems used to gather and disseminate information to the public as wells as first responders in order to increase public confidence and increase public willingness to comply during an actual incident.
- Develop and implement communications protocols integrating both the virtual Joint Information Center (JIC) and face-to-face meetings.
- Develop a protocol for and implement a WebEOC draft news release "holding pen" for review and authorization of release of information.
- Develop communications coordination procedures and protocols that combine the convenience of virtual JIC operations with the effectiveness of face-to-face communications among multiple agency PIO's responding to emergencies or disasters.
- Develop a PIO email distribution list in coordination with ITD.

TRAINING PRIORITIES – State

EMF 4.6: Resource Management, Mutual Aid and Logistics

- Train local officials on the requirements necessary to request state and federal assistance.
- Educate vendors on the process for deployment of and payment of resources.
- Conduct WebEOC training as needed or requested.
- Purchase citizen corps program training materials and kits.
- Research and Purchase IPAWS software and equipment.

EMF 4.9 Training

- Local emergency managers and their staff to complete the 4 required NIMS and 7 required Professional Development courses listed in the FY 2016 EMPG guidance.
- Complete assessment of local emergency management EMPG funded staff that need to complete the 11 required independent study courses.
- Conduct annual Training and Exercise Plan Workshop (TEPW).
- Update State Multi-Year Training and Exercise Plan (TEP).
- Track and review County Multi-Year Training Plans.
- Conduct HazMat Operations course.
- Conduct Planning Section Chief Course.
- Conduct Unified Hazard Mitigation Grant Assistance Courses (L212, L213 & L214).
- Conduct Radiological/Nuclear Awareness Courses.
- Conduct CERT training courses.
- Conduct IEMC course.
- Conduct Safety Officer Course.
- Conduct Cost Benefit Analysis Entry Level Course.
- Conduct Grant Writing Course.
- Conduct Understanding the Role of your Non-Governmental Partners course.
- Conduct AHIMT Position Specific Training Logistics Section Chief Course.

- Conduct Cyber Security courses.
- Conduct Compliance to Records Management Policies course.
- Certify ICS trainers (100, 200, 300, and 400).
- Conduct WebEOC training as needed.
- Increase position-specific IMAT training.
- Host Introduction to Emergency Services workshops for new emergency managers as well as existing emergency managers who need a refresher.
- Conduct Group Facilitation Course.
- Conduct Joint NDDES/NDEMA Workshops.
- Host Basic PIO Course.
- Host Emergency Planning Courses.
- Risk Assessment/Management and THIRA training.
- HAZMAT Conference.
- Provide training on Joint Information Center Planning.
- Wide Area Search and Rescue
- Additional courses will be determined at the TEPW and as identified throughout the year.
- Administer the North Dakota CERT Program.

EXERCISE PRIORITIES – State

EMF 4.10: Exercises, Evaluations, and Corrective Actions

- Conduct 22 exercises and seven full scale exercises.
    - Two Workshops
    - Seven Drills
    - Two Tabletops
    - Four Functional
- Complete After-Action Review and Improvement Plan (AAR/Plan) for each exercise.
- Conduct, as requested, drills on command post functions emphasizing unified command and ICS structures.
- Conduct IMAT workshops to keep ND IMAT teams trained.
- Upon request of locals conduct drills on command post functions emphasizing unified command and ICS structures.

EQUIPMENT PRIORITIES – State

- **EMF 4.4: Operational Planning and Procedures**
    - Procure additional firewall/cyber-security equipment.
- **EMF 4.6: Resource Management, Mutual Aid and Logistics**
    - Procure a new Logistics Inventory Management System.
    - Procure an additional enclosed trailer to store and transport response equipment.

PLANNING FOCUS – Local/Tribal

- The majority of county and tribal planning focus is on updating Local Emergency Operations Plans and Multi-Hazard Mitigation Plans as well as conducting public awareness campaigns.

TRAINING PRIORITIES – Local/Tribal

- Local emergency managers and their staff to complete the 4 required NIMS and 7 required Professional Development courses listed in the FY 2016 EMPG guidance.
- Conduct local or attend regional Multi-Year Training and Exercise Plan Workshops (TEPW).
- Update local Multi-Year Training and Exercise Plans (TEPs).
- Attended NDDES and NDEMA annual workshops – September 10-16, 2017.
- Emphasis will continue on ICS 300-400 training.
- Train Teen CERT members.

- Purchase CERT equipment.

EXERCISE PRIORITIES – Local/Tribal

- Conduct and/or participate in 2 exercises and one full-scale exercise and complete the required AAR/IPs.

EQUIPMENT PRIORITIES – Local/Tribal

- Local/tribal equipment priorities have not yet been identified.

NORTH DAKOTA'S
FY 2016 EMPG WORK PLAN

FY 2015 Personnel Data Table Template

Personnel Metrics	Data
EMPG Program funds (Federal and match) allocated towards State emergency management personnel	2,737,000
EMPG Program funds (Federal and match) allocated towards Non-State emergency management personnel (Local, Tribal, Territories)	2,960,586
Total Number of state emergency management full-time equivalent (FTE) personnel (including those supported and not supported by the EMPG Program)	43
Number of State emergency management full-time equivalent (FTE) personnel supported (fully or partially) by EMPG Program	36
Total Number of state, local, Tribal or territory (SLTT) emergency management personnel supported (fully or partially) by the EMPG Program	105

IMAT WebEOC	2/24/2016	Drill		7

FY 2016 Grant Activities Outline Template

EMF#: 4.1: Hazard Identification, Risk Assessment and Consequence Analysis

Name of Planned Project: Threat and Hazard Identification and Risk Assessment (THIRA)

Project Objective:

- Conduct required annual review and revision of the State's THIRA
- Provide continued training and technical assistance to local/tribal jurisdictions for development and update of Local/Tribal THIRAs
- Provide training and technical assistance to whole community partners regarding THIRA as necessary

Core Capabilities Addressed: Threat and Hazard Identification, Risk and Disaster Resilience Assessment, Planning

Performance Measures and Basis of Evaluation: Threat and Hazard Identification and Risk Assessment Guide (Comprehensive Preparedness Guide (CPG) 201)

Challenges/Risks: Local and State agency participation, competing and shifting priorities, emergency response to events and limited personnel may delay the project

1st Quarter Activity (10/1/15-12/31/15)	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
2nd Quarter Activity (1/1/16-3/31/16)	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
3rd Quarter Activity (4/1/16-6/30/16)	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
4th Quarter Activity (7/1/16-9/30/16)	**Planned Activities:**	**Step:**	**Milestones:**
	State THIRA revision	Plan, Execute, Control	
	Integrate State THIRA results into preparedness activities	Execute, Control	
	Provide THIRA technical assistance	Execute, Control	
	Development of Local/Tribal Step 3 and 4 THIRA strategy and guidance/training	Plan, Execute, Control	
5th Quarter Activity (10/1/16-12/31/16)	**Planned Activities:**	**Step:**	**Milestones:**
	Integrate State THIRA results into preparedness activities	Execute, Control	THIRA Submission
	Provide THIRA technical assistance	Execute, Control	
	Incorporate Local/Tribal THIRA results into State THIRA	Plan, Execute, Control	
	Finalize and submit State THIRA	Plan, Execute, Control	
6th Quarter Activity (1/1/17-3/31/17)	**Planned Activities:**	**Step:**	**Milestones:**
		Plan, Execute, Control	

EMF#: 4.1: Hazard Identification, Risk Assessment and Consequence Analysis

	Integrate State THIRA results into preparedness activities	Plan, Execute, Control	
	Provide THIRA technical assistance		
7th Quarter Activity (4/1/17-6/30/17)	**Planned Activities:**	**Step:**	**Milestones:**
	State THIRA revision	Plan, Execute, Control	
	Integrate State THIRA results into preparedness activities	Execute, Control	
	Provide THIRA technical assistance	Execute, Control	
8th Quarter Activity (7/1/17-9/30/17)	**Planned Activities:**	**Step:**	**Milestones:**
	State THIRA revision	Plan, Execute, Control	
	Integrate State THIRA results into preparedness activities	Execute, Control	
	Provide THIRA technical assistance	Execute, Control	

EMF#: 4.2: Hazard Mitigation: Planning
Name of Planned Project: Enhanced state, local and tribal mitigation plans
Project Objective:

- Continue to identify trends in planning deficiencies found in local, tribal and state multi-hazard mitigation plans (MHMPs) to include risk vulnerability assessments and mitigation strategy development.
- Develop and implement a strategy for addressing deficiencies.
- Encourage incorporation of THIRA components/data into local, tribal and state MHMPs.
- Provide state level guidance designed to emphasize the importance of building code and zoning ordinance analyses.
- Provide state level guidance to encourage involvement of historical and cultural organizations into plan development.

Core Capabilities Addressed: Community Resilience; Long-Term Vulnerability Reduction; Risk and Disaster Resilience Assessment; Threat and Hazard Identification

Performance Measures and Basis of Evaluation: Development of state- and federally-approved multi-hazard mitigation plans.

Challenges/Risks: Limited staff resources; disaster work taking precedence

1st Quarter Activity (10/1/15-12/31/15)	**Planned Activities:** Develop and implement a long-range strategy for inclusion of THIRA data and new hazard information into the State MHMP Provide guidance for improved local and tribal vulnerability and risk assessments Provide guidance for inclusion of cultural and historical organizations during mitigation plan development Provide guidance for building code and zoning ordinance analyses Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations	**Step:** Plan, Execute	**Milestones:**
2nd Quarter Activity (1/1/16-3/31/16)	**Planned Activities:**	**Step:** Execute. Control	**Milestones:**

	Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations		
3rd Quarter Activity (4/1/16-6/30/16)	**Planned Activities:** Initiate analysis of implementation of state-level mitigation actions during 2015 Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations Initiate revisions, if required, to ensure the State Multi-Hazard Mitigation Plan complies with EMAP standards	**Step:** Plan, Execute	**Milestones:**
4th Quarter Activity (7/1/16-9/30/16)	**Planned Activities:** Complete analysis of implementation of state-level mitigation actions during 2015 Complete revisions, if required, to ensure the State Multi-Hazard Mitigation Plan complies with EMAP standards Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations	**Step:** Execute, Control	**Milestones:**
5th Quarter Activity (10/1/16-12/31//16)	**Planned Activities:** Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations	**Step:** Control	**Milestones:**
6th Quarter Activity (1/1/17-3/31/2017)	**Planned Activities:** Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations	**Step:** Control	**Milestones:**

7th Quarter Activity (4/1/17-6/30/17)	**Planned Activities:** Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations	**Step:** Control	**Milestones:**
8th Quarter Activity (7/1/17-9/30/17)	**Planned Activities:** Review local and tribal MHMPs; provide feedback to ensure compliance with federal regulations	**Step:** Control	**Milestones:**

EMF#: 4.2: Disaster Recovery Planning
Name of Planned Project: Disaster Recovery Planning

Project Objective:

- Complete the development of the state level Recovery Plan.
- Evaluate the content with stakeholders and revise accordingly.
- Identify and develop key supporting documents to include appendices, a Master Contact List and a Recovery Resource Guide.
- Ensure alignment of the Recovery Plan and supporting documents with the State Threat and Hazard Identification and Risk Assessment (THIRA), key elements of the National Disaster Recovery Framework (NDRF), and the Emergency Management Accreditation Program (EMAP) standards.
- Develop guidance and provide technical assistance for local-tribal recovery plan development.

Core Capabilities Addressed: Planning, Public Information and Warning, Operational Coordination, Infrastructure Systems; Economic Recovery, Health and Social Services, Housing, Natural and Cultural Resources, Community Resilience; Long-Term Vulnerability Reduction; Risk and Disaster Resilience Assessment; Threat and Hazard Identification
Performance Measures and Basis of Evaluation: Development of a state-approved Recovery Plan
Challenges/Risks: Limited staff resources; disaster work taking precedence

1st Quarter Activity (10/1/15-12/31/15)	**Planned Activities:** Develop drafts of the Recovery Plan and six supporting appendices Align the Recovery Plan and supporting appendices with the State THIRA and key elements of the NDRF Initiate development of the Master Contact List Initiate development of the Recovery Resource Guide Disseminate drafts of the recovery plan and supporting appendices for review to the following groups of reviewers: FEMA, NDDES, emergency managers and state agencies	**Step:** Plan, Execute	**Milestones:**

	Evaluate and incorporate feedback from stakeholders		
2nd Quarter Activity (1/1/16-3/31/16)	**Planned Activities:** Prepare the recovery plan, appendices, Master Contact List and Recovery Resource Guide for review by NDDES leadership Revise the recovery plan and all supporting documents based on feedback Coordinate delivery of the_L205 Recovery from Disaster: The Local Government Role	**Step:** Plan, Execute	**Milestones:**
3rd Quarter Activity (4/1/16-6/30/16)	**Planned Activities:** Ensure the recovery plan and all supporting documents comply with EMAP standards Initiate plan review with stakeholders; revise the recovery plan documents based upon feedback	**Step:** Plan, Execute	**Milestones:**
4th Quarter Activity (7/1/16-9/30/16)	**Planned Activities:** Continue plan orientation with stakeholders; revise the recovery plan documents based upon feedback Complete revisions, if required, to ensure recovery plan and supporting documents comply with EMAP standards	**Step:** Plan, Execute	**Milestones:**
5th Quarter Activity (10/1/16-12/31//16)	**Planned Activities:** Continue plan review with stakeholders; revise the recovery plan	**Step:** Plan, Execute	**Milestones:**

	documents based upon feedback Establish recovery planning guidance for local-tribal governments Provide technical assistance to local and tribal emergency managers with recovery plan development		
6th Quarter Activity (1/1/17-3/31/2017)	**Planned Activities:** Continue plan review with stakeholders; revise the recovery plan documents based upon feedback Coordinate with stakeholders to update the Master Contact List Develop a recovery Response Alert Notification (RAN), as required Provide technical assistance to local and tribal emergency managers with recovery plan development	**Step:** Plan, Execute	**Milestones:**
7th Quarter Activity (4/1/17-6/30/17)	**Planned Activities:** Continue plan review with stakeholders; revise the recovery plan documents based upon feedback Provide technical assistance to local and tribal emergency managers with recovery plan development	**Step:** Control	**Milestones:**
8th Quarter Activity (7/1/17-9/30/17)	**Planned Activities:** Conduct plan review with stakeholders; revise recovery plan documents based upon feedback	**Step:** Control	**Milestones:**

Provide technical assistance to local and tribal emergency managers with recovery plan development

EMF#: 4.4: Operational Planning and Procedures

Name of Planned Project: State Emergency Operations Plan (SEOP) Revisions/Enhancements

Project Objective:

- 4.4.1 Ongoing EAS and IPAWS Implementation
  - A. Ongoing implementation of the state's IPAWS software/equipment and modification of existing plans and procedures
  - B. Review and approve applications for IPAWS Alerting Authority authorization
  - C. Conduct IPAWS outreach, training and exercising for applicable stakeholders
  - D. Evaluate and coordinate implementation at the local level, as necessary
  - E. Assist during implementation and training as necessary for GIS related tasks.
  - F. Conduct continual GIS data management and contact database maintenance for State and local county stakeholders using these systems.
- 4.4.2 State Incident Management Assistance Team (IMAT) Mobilization Guide
  - A. Review and revise existing plans and procedures based on training/exercise improvement plans
  - B. Ongoing coordination with IMATs to evaluate and address operational, planning and resource-related gaps/shortfalls
- 4.4.3 Hazardous Materials
  - A. Ongoing outreach and coordination with appropriate stakeholders to evaluate existing roles/responsibilities, resources/capabilities and notification processes to improve communication, coordination and response.
  - B. Coordinate continual CBRNE hazardous material spill mapping to aid in SERC planning efforts.
- 4.4.4 SEOP
  - A. Ongoing review and revision of SEOP annexes, appendices and supporting documents to more fully reflect THIRA, Core Capabilities, CPG 101 and revisions to the Response Mission Area Operations Plan (formerly the Base Plan)
  - B. Conduct outreach and engage the whole community
  - C. Review and revise existing plans to address movement of large populations in state and out of state.
- 4.4.5 Critical Infrastructure/Key Resources
  - A. Ongoing development of pre-decisional databases, based on key critical infrastructure (i.e. water, energy, food, etc), to aid in critical decision making and prioritizing for preparedness, planning and response activities.
  - B. Conduct a CIKR conference/workshop for key critical infrastructure partners and stakeholders.
- 4.4.6 Provide ongoing GIS support and products for planning purposes to agency sections and products they support.
  - SLIC
  - Operations and Planning
  - Training and Exercise
  - Recovery
  - MHMP/Critical Infrastructure

Core Capabilities Addressed: Public Information and Warning, Operational Coordination, Public and Private Resources and Services, Environmental Response/Health and Safety, Planning

Performance Measures and Basis of Evaluation: Completion of updates, test effectiveness through application during an incident.

Challenges/Risks: State agency participation, competing and shifting priorities, emergency response to events and limited personnel may delay the project

1st Quarter Activity (10/1/15-12/31/15)	**Planned Activities:** N/A	**Step:**	**Milestones:**
2nd Quarter Activity (1/1/16-3/31/16)	**Planned Activities:** N/A	**Step:**	**Milestones:**
3rd Quarter Activity (4/1/16-6/30/16)	**Planned Activities:** N/A	**Step:**	**Milestones:**
4th Quarter Activity (7/1/16-9/30/16)	**Planned Activities:** 4.4.1	**Step:** Execute, Control	**Milestones:**

EMF#: 4.4: Operational Planning and Procedures

	4.4.2 4.4.3 4.4.4 4.4.5 4.4.6	Execute, Control Execute, Control ALL Initiate, Plan Execute, Control	Conduct training on Response MAOP Continued implementation of EAS/IPAWS Products developed/ updated as required
5th Quarter Activity (10/1/16-12/31/16)	**Planned Activities:**	**Step:**	**Milestones:**
	4.4.1 4.4.2 4.4.3 4.4.4 4.4.5	Execute, Control Execute, Control Execute, Control ALL Initiate, Plan	State Agencies with significant roles in Response MAOP oriented to the plan Continued implementation of EAS/IPAWS Products developed/ updated as required
6th Quarter Activity (1/1/17-3/31/17)	**Planned Activities:**	**Step:**	**Milestones:**
	4.4.1 4.4.2 4.4.3 4.4.4 4.4.5	Execute, Control Execute, Control Execute, Control ALL Plan, Execute	Continued implementation of EAS/IPAWS Products developed/ updated as required
7th Quarter Activity (4/1/17-6/30/17)	**Planned Activities:**	**Step:**	**Milestones:**
	4.4.1 4.4.2 4.4.3 4.4.4 4.4.5	Execute, Control Execute, Control Execute, Control ALL Execute, Control	Continued implementation of EAS/IPAWS Products developed/ updated as required
8th Quarter Activity (7/1/17-9/30/17)	**Planned Activities:**	**Step:**	**Milestones:**
	4.4.1 4.4.2 4.4.3 4.4.4 4.4.5	Execute, Control Execute, Control Execute, Control ALL Execute, Control, Close Out	Continued implementation of EAS/IPAWS Products developed/ updated as required

EMF#: 4.5: Incident Management

Name of Planned Project: Continued WebEOC Implementation/Enhancements, Administration and Training

Project Objective:

- Continue implementation and enhancements and modifications to WebEOC.
- Provide ongoing administration of WebEOC.
- Conduct refresher training and technical assistance, to include Resource Management and Mapper, to new and existing WebEOC users.
- Continue leveraging WebEOC during exercises and real-world events.
- Develop WebEOC training materials for WebEOC 8.0.
- Identify and secure necessary equipment/resources to ensure back up capability and resiliency for WebEOC and other critical systems.
- Provide GIS functional updates related to WebEOC & Web Mapper as needed on daily basis or during times of activation.

Core Capabilities Addressed: Operational Coordination, Situational Assessment, Information and Intelligence

Performance Measures and Basis of Evaluation: Test effectiveness through application during an incident

Challenges/Risks: Competing and shifting priorities, emergency response to events and limited personnel may delay the project

1st Quarter Activity (10/1/15-12/31/15)	**Planned Activities:** N/A	**Step:**	**Milestones:**
2nd Quarter Activity (1/1/16-3/31/16)	**Planned Activities:** N/A	**Step:**	**Milestones:**
3rd Quarter Activity (4/1/16-6/30/16)	**Planned Activities:** N/A	**Step:**	**Milestones:**
4th Quarter Activity (7/1/16-9/30/16)	**Planned Activities:** Conduct WebEOC training as requested and incorporate into exercises and real-world events	**Step:** Execute, Control	**Milestones:**
	Ongoing administration of WebEOC and troubleshooting	Plan, Execute, Control	
	Implement applicable enhancements and modifications as identified	Plan, Execute, Control	
	Initiate development of training materials for WebEOC 8.0	Initiate, Plan, Execute	
	Research back up capability options for WebEOC	Initiate, Plan	
	GIS Updates	Execute, Control	
5th Quarter Activity (10/1/16-12/31/16)	**Planned Activities:**	**Step:** Execute, Control	**Milestones:**

EMF#: 4.5: Incident Management

	Conduct WebEOC training as requested and incorporate into exercises and real-world events	Plan, Execute, Control	
	Ongoing administration of WebEOC and troubleshooting	Plan, Execute, Control	
	Implement applicable enhancements and modifications as identified		
	Finalize training materials for WebEOC 8.0	Execute, Control, Close Out	
	Research and implementation of WebEOC back up capability	Plan, Execute, Control	
	GIS Updates	Execute, Control	
6th Quarter Activity (1/1/17-3/31/17)	**Planned Activities:**	**Step:**	**Milestones:**
	Conduct WebEOC training as requested and incorporate into exercises and real-world events	Execute, Control	
	Ongoing administration of WebEOC and troubleshooting	Plan, Execute, Control	
	Implement applicable enhancements and modifications as identified	Plan, Execute, Control	
	Implementation of WebEOC back up capability	Execute, Control	
	GIS Updates	Execute, Control	
7th Quarter Activity (4/1/17-6/30/17)	**Planned Activities:**	**Step:**	**Milestones:**
	Conduct WebEOC training as requested and incorporate into exercises and real-world events	Execute, Control	

EMF#: 4.5: Incident Management

	Ongoing administration of WebEOC and troubleshooting	Plan, Execute, Control	
	Implement applicable enhancements and modifications as identified	Plan, Execute, Control	
	Ongoing implementation of WebEOC back up capability	Execute, Control, Close Out	
	GIS Updates	Execute, Control	
	Planned Activities:	**Step:**	**Milestones:**
	Conduct WebEOC training as requested and incorporate into exercises and real-world events	Execute, Control	
8th Quarter Activity (7/1/17-9/30/17)	Ongoing administration of WebEOC and troubleshooting	Plan, Execute, Control	
	Implement applicable enhancements and modifications as identified	Plan, Execute, Control	
	GIS Updates	Execute, Control	

EMF#: 4.6: Resource Management, Mutual Aid and Logistics

Name of Planned Project:

- Procure and implement agency inventory management system
- Ongoing development of equipment/resource-related documents
- Sustainment and enhancement of existing cache of resources/equipment.
- Ongoing EMAC and Northern Emergency Assistance Compact (NEMAC) coordination

Project Objective:

- 4.6.1 Procure and implement agency inventory management system
  - A. Develop, review and revise operational checklists and SOPs
  - B. Incorporate systems into existing warehouse management activities and SEOC operations
  - C. Identify, evaluate and implement, where appropriate, additional uses
  - D. Provide ongoing training regarding administration and use of the system
- 4.6.2 Continued enhancements and modifications to WebEOC Resource Management
  - A. Provide ongoing administration of WebEOC Resource Management
  - B. Maintain and update private, voluntary, local/tribal, state and federal agency resources lists
  - C. Provide training and technical assistance to new and existing WebEOC users
  - D. Ensure resources are typed in accordance with NIMS
- 4.6.3 Sustainment and enhancement of existing NDDES resources and warehouse space
  - A. Acquire additional resources/equipment, if necessary, as resource gaps/shortfalls are identified
  - B. Ongoing development/revision of equipment-related operational checklists, SOPs, user agreements, maintenance schedules and training materials
  - C. Perform regular maintenance and make necessary repairs to ensure readiness of equipment/resources for deployment
- 4.6.4 Ongoing coordination with signatory states/provinces to implement NEMAC
  - A. Develop, review and modify plans/procedures for deployment of resources to another state/province
  - B. Identify and address issues/concerns impacting/hindering ability to deploy resources
  - C. Participate in training and exercise activities
- 4.6.5 Emergency Management Assistance Compact (EMAC)
  - A. Review and modify plans/procedures for deployment of resources
  - B. Identify and address issues/concerns impacting/hindering ability to deploy resources
  - C. Participate in training and exercise activities

Core Capabilities Addressed: Public and Private Resources and Services, Operational Coordination, Planning, Access Control and Identify Verification, Planning

Performance Measures and Basis of Evaluation: Completion of updates, test effectiveness through application during an incident

Challenges/Risks: Local and State agency participation, competing and shifting priorities, emergency response to events and limited personnel may delay the project

1st Quarter Activity **(10/1/15-12/31/15)**	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
2nd Quarter Activity **(1/1/16-3/31/16)**	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
3rd Quarter Activity **(4/1/16-6/30/16)**	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
4th Quarter Activity **(7/1/16-9/30/16)**	**Planned Activities:** 4.6.1 4.6.2 4.6.3 4.6.4 4.6.5	**Step:** Initiate, Plan, Execute Execute, Control Execute, Control Execute, Control Execute, Control	**Milestones:**
5th Quarter Activity **(10/1/16-12/31/16)**	**Planned Activities:** 4.6.1	**Step:** Plan, Execute	**Milestones:**

	4.6.2	Execute, Control	
	4.6.3	Execute, Control	
	4.6.4	Execute, Control	
	4.6.5	Execute, Control	

6th Quarter Activity (1/1/17-3/31/17)	**Planned Activities:**	**Step:**	**Milestones:**
	4.6.1	Execute	
	4.6.2	Execute, Control	
	4.6.3	Execute, Control	
	4.6.4	Execute, Control	
	4.6.5	Execute, Control	

	Planned Activities:	**Step:**	**Milestones:**
7th Quarter Activity (4/1/17-6/30/17)	4.6.1	Execute, Control	
	4.6.2	Execute, Control	
	4.6.3	Execute, Control	
	4.6.4	Execute, Control	
	4.6.5	Execute, Control	

	Planned Activities:	**Step:**	**Milestones:**
8th Quarter Activity (7/1/17-9/30/17)	4.6.1	Execute, Control	
	4.6.2	Execute, Control	
	4.6.3	Execute, Control	
	4.6.4	Execute, Control	
	4.6.5	Execute, Control	

EMF#: 4.7: Communications and Warning

Name of Planned Project: Ongoing implementation and administration of the agencies emergency notification systems

Project Objective:

- Ongoing development and revision plans and procedures outlining use of the system in relationship to the Special Needs Voluntary Registry, State Radio counties and internal NDDES notification
- Provide ongoing training regarding administration and activation of the systems
- Incorporate, where appropriate, activation of the system(s) during exercises
- Continue to evaluate additional potential applications of the system(s)

Core Capabilities Addressed: Public Information and Warning, Operational Coordination

Performance Measures and Basis of Evaluation: Test effectiveness through application during an incident

Challenges/Risks: Competing and shifting priorities, emergency response to events and limited personnel may delay the project

1st Quarter Activity (10/1/15-12/31/15)	**Planned Activities:** N/A	**Step:**	**Milestones:**
2nd Quarter Activity (1/1/16-3/31/16)	**Planned Activities:** N/A	**Step:**	**Milestones:**
3rd Quarter Activity (4/1/16-6/30/16)	**Planned Activities:** N/A	**Step:**	**Milestones:**
4th Quarter Activity (7/1/16-9/30/16)	**Planned Activities:** Ongoing administration activities of the system(s)	**Step:** Execute, Control	**Milestones:**
	Ongoing development/revision of operational checklists and SOPs	Execute, Control	
	Ongoing training for NDDES staff and others, as needed	Execute, Control	
	Incorporate, where appropriate, activation of system(s) during exercises	Execute, Control	
	Ongoing evaluation of potential applications of system(s)	Execute, Control	
5th Quarter Activity (10/1/16-12/31/16)	**Planned Activities:** Ongoing administration activities of the system(s)	**Step:** Execute, Control	**Milestones:**
	Ongoing development/revision of operational checklists and SOPs	Execute, Control	
		Execute, Control	

	Ongoing training for NDDES staff and others, as needed	Execute, Control	
	Incorporate, where appropriate, activation of system(s) during exercises	Execute, Control	
	Ongoing evaluation of potential applications of system(s)		
6th Quarter Activity (1/1/17-3/31/17)	**Planned Activities:**	**Step:**	**Milestones:**
	Ongoing administration activities of the system(s)	Execute, Control	
	Ongoing development/revision of operational checklists and SOPs	Execute, Control	
	Ongoing training for NDDES staff and others, as needed	Execute, Control	
	Incorporate, where appropriate, activation of system(s) during exercises	Execute, Control	
	Ongoing evaluation of potential applications of system(s)	Execute, Control	
7th Quarter Activity (4/1/17-6/30/17)	**Planned Activities:**	**Step:**	**Milestones:**
	Ongoing administration activities of the system(s)	Execute, Control	
	Ongoing development/revision of operational checklists and SOPs	Execute, Control	
	Ongoing training for NDDES staff and others, as needed	Execute, Control	
	Incorporate, where appropriate, activation of system(s) during exercises	Execute, Control	
		Execute, Control	

	Ongoing evaluation of potential applications of system(s)		
	Planned Activities:	**Step:**	**Milestones:**
	Ongoing administration activities of the system(s)	Execute, Control	
	Ongoing development/revision of operational checklists and SOPs	Execute, Control	
8th Quarter Activity (7/1/17-9/30/17)	Ongoing training for NDDES staff and others, as needed	Execute, Control	
	Incorporate, where appropriate, activation of system(s) during exercises	Execute, Control	
	Ongoing evaluation of potential applications of system(s)	Execute, Control	

EMF#: 4.8: Facilities

Name of Planned Project: Alternate State Emergency Operations Center (SEOC) and Communications Center

Project Objective:

- Ongoing identification and implementation of necessary modifications and enhancements to the designated Alternate EOC and Communications Center to ensure continuity of operations in the event the existing facility becomes inoperable
- Development and modification of plans and procedures
- Identify and acquire additional resources/equipment/supplies/services necessary to establish and maintain an Alternate EOC and Communications Center

Core Capabilities Addressed: Public and Private Resources and Services, Operational Coordination, Planning

Performance Measures and Basis of Evaluation: Test effectiveness through application during an incident

Challenges/Risks: Competing and shifting priorities, emergency response to events and limited personnel may delay the project

1st Quarter Activity (10/1/15-12/31/15)	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
2nd Quarter Activity (1/1/16-3/31/16)	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
3rd Quarter Activity (4/1/16-6/30/16)	**Planned Activities:** **N/A**	**Step:**	**Milestones:**
4th Quarter Activity (7/1/16-9/30/16)	**Planned Activities:**	**Step:**	**Milestones:**
	Ongoing identification and implementation of necessary modifications	Execute, Control	
	Identify and acquire additional resources/equipment/supplies/services, as needed	Execute, Control	
5th Quarter Activity (10/1/16-12/31/16)	**Planned Activities:**	**Step:**	**Milestones:**
	Ongoing identification and implementation of necessary modifications	Execute, Control	
	Identify and acquire additional resources/equipment/supplies/services, as needed	Execute, Control	
	Review and revise Alternate EOC Plan to reflect State Radio operations	Plan, Execute	
6th Quarter Activity (1/1/17-3/31/17)	**Planned Activities:**	**Step:**	**Milestones:**
	Ongoing identification and implementation of necessary modifications	Execute, Control	
	Identify and acquire additional resources/equipment/supplies/services, as needed	Execute, Control	
	Exercise the Alternate EOC Plan	Execute, Control	
7th Quarter Activity (4/1/17-6/30/17)	**Planned Activities:**	**Step:** Execute, Control	**Milestones:**

	Ongoing identification and implementation of necessary modifications		
	Identify and acquire additional resources/equipment/supplies/services, as needed	Execute, Control	
8th Quarter Activity (7/1/17-9/30/17)	**Planned Activities:**	**Step:**	**Milestones:**
	Ongoing identification and implementation of necessary modifications	Execute, Control	
	Identify and acquire additional resources/equipment/supplies/services, as needed	Execute, Control

ANALYSIS

- *Colorado:* Two Colorado groups won grants to work on emergency preparedness and underground mine safety… A nonprofit group is asking for donations to help rebuild Haiti after Hurricane Matthew… A donation center has been set up to help victims of the Beulah Hill Fire…. Estes Park will have a public meeting October 26 to discuss floodplain issues… A follow-up article on the federal investigation in Lyons says the FBI is not pursuing a case, and that HUD is focused on contracts between Lyons and a company called Front Range Land Solutions and its owner, former Lyons planner Rosi Dennett.
- *Montana:* A TV station did a story on a Red Cross volunteer heading to help with Hurricane Matthew.
- *North Dakota:* An ag journal reports on a new disaster application that can help small businesses. It uses information from ready.gov and makes it a fill-in-the-blank app for smartphones and tablets… The *Minneapolis Star Tribune* reports on the split between Fargo/Moorhead and the state of Minnesota over the proposed diversion project. The article details the reasons for Minnesota's opposition and notes potential problems in getting congressional approval to go ahead with the project…. Two articles report on the pipeline protest: the courts have denied an emergency injunction to prevent construction, but three federal agencies continue reviewing the issues raised by the protestors and have asked the company to voluntarily suspend construction pending that review. Another article reports on the protests: actress Shailene Woodley and 26 other protestors were arrested Monday, the highest one-day total so far, bringing the total number arrested to 123. The protestors have since been released.
- *South Dakota:* A part of a continuing series looking back at the 2011 flood reports on how the Fort Randall Dam held up.
- *Utah:* No FEMA-related stories
- *Wyoming:* No FEMA-related stories
- *Other FEMA-related stories:*

STORIES

COLORADO:

Mine rescue training, emergency preparedness grants awarded (KOAA TV 5)

MORGANTOWN, W.Va. (AP) - Six groups will share $1 million in grants to develop training for emergency preparedness and accident prevention in underground mines.

The U.S. Mine Safety and Health Administration announced the Brookwood-Sago grants last week.

Receiving grants are the University of Arizona, the Colorado School of Mines, the Colorado Department of Natural Resources, Rend Lake College in Ina, Illinois, the Virginia Department of Mines, Minerals and Energy, and West Virginia University.

WVU says in a news release that the university will use a grant of nearly $172,000 to integrate fire brigades and mine rescue teams in an emergency involving fire and trapped miners.

The grant program is named in remembrance of 25 men who died in mining explosions in Alabama in 2001 and at the Sago Mine in West Virginia in 2006.

Colorado group helping Haiti rebuild after hurricane (FOX 31 Denver)

LOUISVILLE, Colo. – A Colorado nonprofit dedicated to rebuilding rural Haiti is asking for some emergency donations following Hurricane Matthew.

The Colorado Haiti Project has been doing work in Petit-Trou-de-Nippes for almost 30 years. The group focuses on long term rebuilding projects like education, agriculture, livelihood and clean water.

CHP has one dedicated project manager living in Haiti full-time. The Louisville based organization sends several groups throughout the year to do aid work.

They built a school that serves nearly 400 Haitian children. The school suffered major damage in the storm.

“When you look inside any room everything is just thrown all over the place,” explained CHP’s Teresa Henry. “Now they have no books and everything in the classrooms is gone.”

Her co-worker who is in Haiti right now says about half of the community’s homes are gone. She also says almost all of the crops have been leveled and most of the livestock has perished.

“They don’t have bank accounts. In Haiti, you consider your bank your goats and cows. That is your income,” Henry said. “All their crops have been lost. All of it. They have nothing for their livelihood.”

She worries if they can’t help Haitians rebuild fast enough, the region will eventually starve.

“We’re concerned about making sure they eat enough through the winter so getting the crops back in the ground is huge,” she said.

CHP is doing several emergency fundraisers to help their Haitian community rebuild and replant. You can visit their website to donate and find more information about local fundraising opportunities.

The money will go directly to the small rural communities where Coloradan are helping rebuild by hand. Their project manager in Haiti will return to Colorado later this week and CHP will decide within the next two weeks a rebuild plan-of-action for the next 12 months.

The group believes donating to them is a good way for Coloradans to see exactly where their money is going and how it is being used.

“You can be like one degree away from where you make your donation,” Henry said

Donation center set up for Beulah Hill Fire victims (Pueblo Chieftain)

October 11, 2016

A donation center for victims of the Beulah Hill Fire opened Sunday morning and plenty of donors had already walked through the doors and dropped items off by Monday afternoon.

Beulah Hill Fire at 95 percent containment; blaze expected to be fully contained by Sunday Free pain/injury screening for firefighters

Kathy Hayden of the Adventist Community Services Disaster Response Team said that by 2:30 p.m. Monday there had already been about 30 community members who had stopped by the donation center to bring items of need.

The donation center, located at the Colorado Building on the Colorado State Fairgrounds, was filled with clothing, kitchenware, blankets, sleeping bags, food, water, cleaning and laundry supplies, toilet paper, paper towels, assorted toiletries, tools, shoes and some toys.

A woman was seen Monday afternoon getting out of her car and bringing numerous bags of items to the donation center for victims of last week's Beulah Hill Fire, which burned 5,232 acres of land, destroyed eight homes and forced the entire Beulah Valley to be evacuated until some residents began returning on Wednesday and Thursday, and the rest on Friday.

Volunteers strolled the inside of the Colorado Building, sorting out donated items and organizing racks and shelves.

"It's wonderful to see so many people helping out and taking care of each other," Hayden said.

Beulah residents have been stopping by the donation center since Sunday morning to pick up needed items and can continue to do so.

"They've been really good about it," Hayden said. "They're just taking what they need."

The donation center is open daily from 10 a.m. to 7 p.m. through Sunday.

Hayden said the most needed items right now are children's clothing, food and tools.

"A lot of people lost tools," said Robyn Knappe, a voluntary agency liaison for the Colorado Division of Homeland Security & Emergency Management.

Hayden, who thanked firefighters and emergency crews for their tireless work in battling the blaze, said she's happy the disaster response team can play a role in helping families who lost so much in the wildfire.

"At least maybe we can do something to help put their lives back together," she said.

Public encouraged to review new Estes Valley hydrology data Oct. 26 (Estes Park Trail Gazette)

Study contributes to a safer, more resilient community

Town of Estes Park - For the Trail Gazette

POSTED: 10/11/2016 09:38:17 AM MDT

The Town of Estes Park and its consultant, Wright Water Engineers, will present the results of a scientific hydrology study of the Big Thompson River, Black Canyon Creek, Dry Gulch and Fall River on Wednesday, Oct. 26, at 8 a.m. in the Town Board Room of Town Hall, 170 MacGregor Ave. Other topics discussed will be a preliminary map of new floodplain boundaries in the downtown area and how this study impacts floodplain management. The completion of the study is a milestone in the process of ensuring a safer, more resilient Estes Park community. Study results will be available for review at www.estes.org/floodmitigation by Oct. 21.

Educational resources on the hydrology study and other flood mitigation efforts are also posted to this site as they become available.

The Oct. 26 meeting is targeted to both a general interest audience and particularly those concerned with development and flood mitigation opportunities, as the hydrology data is part of the floodplain permitting process. Wright Water Engineers will present the results and be available to answer both general and technical questions. Staff from the Colorado Water Conservation Board will discuss preliminary floodplain maps and staff from the Colorado Resiliency and Recovery Office will be in attendance to answer questions. This meeting will be streamed live on local cable channel 12 and via www.estes.org/videos. It will also be recorded for viewing later via www.estes.org/videos. The Town Board will review the information during a study session the evening of Oct. 25.

The 2013 flood was a stark reminder of flood risk, and the Town is taking action to better understand the hazards Estes Park's residents face. The hydrology study results will serve as the basis of flood mitigation projects and a key part of future flood mitigation decisions. In addition, the new information may help the Town receive grants. It will also provide data for new floodplain maps, which will go into effect in the coming years.

The Town will also host a workshop for realtors, lenders and insurance agents on flood insurance topics presented by FEMA staff Oct. 24, from 10 a.m. to noon at the Estes Park Museum, 200 4th St.

For more information on flood mitigation efforts, please visitwww.estes.org/floodmitigation or contact Floodplain Manager and Planner Tina Kurtz at 970-577-3732 or tkurtz@estes.org.

Lyons residents: 'We're just starting to get it together' (Boulder Daily Camera)

Federal scrutiny stirs concern in town that has struggled

By Amelia Arvesen
Staff Writer

The town of Lyons has submitted to more than one waiting game.

People there have been waiting to rebuild their town and now they're waiting on a federal investigation into the flood-recovery process.

"I'm frustrated because I'd like to know what's going on instead of waiting," longtime resident Craig Ferguson said. "There's been a lot of waiting for three years."

As Lyons entered its fourth year of reconstruction following the devastating September 2013 flood, the FBI and U.S. Department of Housing and Urban Development stopped by to seize documents and computers to probe the handling of federal flood-recovery funding.

Communities savaged by the rushing waters have been receiving fund allocations, totaling millions of dollars from several federal sources, such as HUD and the Federal Emergency Management Agency.

Late Friday, Mayor Connie Sullivan released a statement on behalf of the town's Board of Trustees, stating that the FBI had concluded its portion of the investigation and would not be proceeding with a case.

Also posted to the town's website was a copy of a subpoena from the U.S. Department of Housing and Urban Development, stating that a focus of its investigation was documents relating to negotiations and grant services contracts between Lyons and Longmont-based Front Range Land Solutions.

The subpoena also seeks all "invoices, bills, receipts, and other documents" reflecting charges or payments with respect to that company and its owner, Rosi Dennett.

Dennett, who could not be reached for comment Friday night, identifies herself on her Linkedin page as having served as Town Planner for Lyons from April 2004 to December 2008.

Ferguson, Planet Bluegrass president, said before the flood the town could only fathom a budget of $1 million per year, and suddenly they were expected to keep track of exponentially more in the midst of disaster.

"To take care of that is a completely different job," Ferguson said. "Mistakes might have been made. Personally, I guess, I'm kind of hoping that things can be corrected quickly and it's not personal."

Apparently as a precaution into the investigation's integrity, both the town administrator and clerk were placed on temporary leave and replaced in the interim. Sullivan has said the move should not be construed as a suspicion of wrongdoing by those employees.

Ferguson said he knows most town officials well after living in Lyons 25 years and he said he has a hard time believing there was any foul play.

A hope 'someone is held accountable'

On Friday, LaVern Johnson sat under a shade of an awning behind her house, where she hosted a yard sale benefitting the Lyons Historical Society.

"Why Lyons?" Johnson asked.

She said many people are upset, saddened and disappointed by the mayor's brief and formal announcement Wednesday night at Town Hall that provided little information.

"I would say they could've made mistakes somewhere," Johnson said. "I don't think they did anything that is illegal as to taking money and those kinds of things. I don't know what they're after. I don't know how they could abscond with any money."

A man who did not provide his name and who lives in Lyons' Confluence neighborhood — an area that was hit hard by the flood — said nobody would be interested in what he has to say on the issue.

"I hope someone is held accountable," he said.

At The Stone Cup in downtown Lyons, employee and resident of 12 years Robin Young said she has worked eight hours five days in a row and that the topic has come up. She said the town chatter is that people are frustrated with the lack of information, but also understand that town officials can't say too much yet.

"There's great, great people here and it's been a long three years," Young said. "But I believe, from what I've heard, people are taking a wait-and-see approach and are just anxious."

Ferguson said while the investigation is somewhat a blemish on trust, he is confident the mayor and town board were doing their best and he would be surprised if it involved criminal behavior.

"We just don't need that right now," he said. "We're just starting to get it together."

Johnson said she trusts the town officials. She is confident they've done everything they can in light of the devastation the community has been through.

"With things like this going on, I don't think we can ever recover," Johnson said. "How can you recover when somebody is going to accuse you? I think it's sad."

Johnson said she is also surprised by how much the town has accomplished, such as designing Bohn Park. She said as the town works on the budget, it's not taking on new project proposals, and sticking to the 2016 budget when planning for next year.

A punch in the gut

The continuous beeping of construction vehicles working on streets nearby echoed through the neighborhoods. Sections of streets were peeled back, revealing the dirt below.

Jenny Voss, out walking her dog near the former Foothills Mobile Home Park, said she did not know more than what has already been revealed.

Carrie Davis-Gonzales, who lost her mobile home near the creek, was watching broadcast news reports about the hurricane in Florida Friday afternoon. She moved three years ago to the only remaining home in the park.

In response to the recent investigation of Lyons, she said she is more unquestioning than maybe she should be. She said as a result of trying to rebuild a mobile home park, she has researched and discovered similar federal investigations into devastated towns — from the benign to the extreme.

"From the outside, I can't really say what's going on in there but it could be so tiny because they are extremely meticulous," she said.

It would be difficult to screw up, she said, and wrongdoing would be even harder.

"It's not back in the day where they'd come in with money bags — this is all done electronically," Davis-Gonzales said, sitting on her front porch with a view of the abandoned mobile homes.

State Rep. Jonathan Singer, the Longmont Democrat whose House District 11 includes Lyons, said over the phone it's just another punch in residents' gut — another reminder that they haven't bounced back 100 percent from where they were more than three years ago.

"People are sort of worn down and worn out," Singer said. "They haven't given up but it's really hard to hear from another person, 'Well I know you don't want to hear this but we need to follow this new process.' Obviously that's going to wear anyone out."

He said some people still haven't been able to return home, and some people may never get to.

And while, Davis-Gonzales has been living in the only home left on the mobile home property, she is living each day thinking the next could be her last in Lyons, since the park owner recently opted for the buyout. Her home for the last three years will eventually be leveled.

Singer said he hopes whatever is under review is as simple as a paperwork error.

"If it is something else, I hope we find out very quickly and then we can move on and we can move forward," he said.

Ferguson said it's been easy for a lot of people to be angry at the slow progress, but he knows realistically the process is complicated.

"I'm sure once they know, they'll want to inform us," he said. "I think when someone comes into your place with a subpoena you need to take three or four days to figure out what it means. I know I would."

Staff writer Charlie Brennan contributed to this report

MONTANA:

Montana Red Cross volunteer helping in wake of Hurricane Matthew (KTVQ-Billings)

Posted: Oct 08, 2016 11:08 AM MST Updated: Oct 08, 2016 11:14 AM MST

By MTN News

KALISPELL - While millions try to escape Hurricane Matthew, Red Cross volunteers are racing into the storm to help with relief efforts, including Joe Kingan with the Flathead County chapter of the American Red Cross.

Kingan had nothing but a cell phone and a bag of survival gear as he waited at Glacier International Airport for his flight.

"Got my headlamp got flashlights, that kind of stuff."

He's been deployed to Hurricane Matthew by the **American Red Cross**, but for the husband and father, perhaps what's most important is his endurance in facing the unknown.

"They want me to go and help, and they're concerned about the safety aspects as well as I am," Kingan said.

The National Weather Service has warned that some places hit by Hurricane Matthew could be uninhabitable for "weeks or months." Kingan will be teaming up with two to four other volunteers to assess the damage.

"We would be recording it and putting it into a database file that actually gets shared with FEMA, other government agencies, Salvation Army, and that data will be used to evaluate future assistant needs," he said.

Kingan said that one tool in particular will play a key role in staying safe as he heads into the danger zone: his smartphone.

"They keep us updated on a regular basis on what's going on in the immediate area where we're located. For example, a while ago I got a text message coming in that alerted us to a tornado warning out in one of the counties in Florida right now with one of the rain bands coming off the hurricane."

Although he leaves a wife and a son behind, he is carrying them with him in spirit.

"We will endure," Kingan concluded. "We like helping other people, so it will be well worth our trip down."

If you would like to join the cause, you can donate blood, text "RedCross to 90-999" to make an automatic $10-dollar or call 1-800-RED-CROSS.

NORTH DAKOTA:

New disaster app can help small businesses prepare for the worst (High Plains Journal)

The sprinklers go off by mistake in your office building. A strong wind blows the roof off your lab. You lose all of your computer files in a major crash.

If you own or manage a small business, a disaster like any one of these could put a major dent in your work and your bottom line.

A new phone app won't fix such problems, but could help a business start operating again more quickly and easily.

The Small Business Disaster Plan app is available free for iOS and Android tablets and smartphones. It was developed by the North Dakota State University Extension Service and Myriad Mobile, Fargo, N.D.

"We used FEMA's ready.gov information for businesses and the Extension Disaster Education Network's Ready Business training program to integrate with the functionality of the tablet and smartphone," said Bob Bertsch, the NDSU web technology specialist who led work on the app's content. "Yes, there are online templates for business disaster plans, but this app provides portability and functionality."

The Extension Disaster Education Network is a collaboration of land grant universities focused on reducing the effect of disasters through education. Kansas State University is a part of EDEN and shares preparedness tips on its Prepare Kansas blog.

"There are two things that I have heard small-business owners say repeatedly: The first is they never have enough time. And the second is, 'Where did I file that?'" said Glenn Muske, NDSU Extension rural and agribusiness enterprise development specialist.

The Small Business Disaster Plan app takes on both of those, Muske said, by letting you fill out important disaster plan information, along with supporting photos right from your smartphone or tablet – which you always have with you.

"Of course, you should save the information in the cloud, too, in case your phone or tablet is lost," he added.

The app lets you enter information for your business, including basic and contact information, emergency planning, evacuation, insurance information and more.

Plans should be reviewed annually, Muske said, so the app uses your phone's alerts to remind you to review the information at a designated time in the future.

The content can be downloaded as a csv file. The app also encourages you to upload the content to a cloud service such as Dropbox, iCloud, Drop or a similar service for backup.

"Planning is never high on anyone's list," Muske said. "But think how easy the process is when the structure is there and you just need to fill in the blanks. That's exactly what this Small Business Disaster Plan app provides. And because September is National Preparedness Month, it's a great time to get your business prepared for disasters."

Development of the Small Business Disaster Plan app for tablets and smartphones was supported by a grant from the National Institute of Food and Agriculture, U.S. Department of Agriculture.

Minnesota, North Dakota at a standoff over $2 billion Red River project (Star Tribune)

By Josephine Marcotty and Jennifer Brooks Staff writers

A long-simmering fight between Minnesota and North Dakota has broken wide open now that Gov. Mark Dayton has drawn a line down the middle of the Red River by refusing to allow a massive flood diversion project to go forward on his side of the border.

Residents and local leaders in Fargo are outraged at what they say is his administration's cavalier advice to keep sandbagging in the face of ever higher threats of flooding. The U.S. Army Corps of Engineers and even the mayor of the Minnesota city Moorhead came out swinging last week, vowing to press ahead with the $2.1 billion project.

While proponents say they want to keep talking with Minnesota, the depth of the disagreement about the value and safety of the diversion project is so profound that, other than a legal battle, there is no apparent resolution in sight.

"If there is a confrontation, there will be a confrontation," said Darrell Vanyo, executive director of the Fargo-Moorhead Diversion Authority. He said the U.S. Army Corps of Engineers has all the authority it needs to build a high-hazard dam and flood thousands of acres of mostly farmland on the Minnesota side of the river in order to protect the Fargo-Moorhead urban areas.

But attorneys for residents who have been fighting the project in federal court say that decision would have to be made in Washington, D.C. And riding roughshod over Minnesota, they say, would require strong congressional support.

"The Army Corps, thankfully, is not the king of the United States," said Jerry Von Korff, the attorney representing upstream communities that would be flooded if the project went forward as planned.

And so far, while Congress has approved the project, it's only provided $5 million of the $450 million in federal funds that are part of the deal.

"Just the fact that you've got a lawsuit going on is going to make it difficult to get federal money," said U.S. Rep. Collin Peterson, whose district is bordered by the Red River. "It's hard enough to get things funded without having controversy."

But project supporters didn't seem to heed clear warnings, going back more than a year, that Minnesota was unlikely to grant them the permit they need.

A year ago, Peterson met with diversion officials.

"I asked them, 'What is your Plan B if Minnesota denies the permit?' ”he said.”And they said, 'There is no Plan B.' "

51 floods in 113 years

There is widespread agreement that Fargo needs protection from floods — the question is how.

The Red has flooded 51 of the past 113 years, causing millions of dollars in damage to homes and businesses around Fargo and the region. Across the river, Moorhead sits 4 feet higher and is protected by $130 million worth of walls, dikes and levees that Minnesota has put in place over the years.

After the most recent flood, in 2009, local North Dakota governments asked the U.S. Army Corps of Engineers to come up with a long-term plan. And it came up with a big one.

The Corps would carve a 36-mile ditch around Fargo and build flood control dams across the Wild Rice and Red rivers. In the event of a flood, water from the Red and its five tributaries would be diverted away from Fargo — the region's bustling economic hub — and into miles of North Dakota and Minnesota farmland and prairie.

North Dakota would pay $1.2 billion of the cost and Minnesota would pay $100 million.

If the project goes ahead, a net increase of 2,000 acres in Minnesota would be at risk of flooding. But across the river, many more thousands of acres would be left high and dry and ripe for construction of homes, schools and businesses.

A crucial piece: Construction of what Minnesota officials describe as a "high-hazard" dam across the Red — the kind that would cause catastrophic damage if it fails.

Minnesota officials have been critical of the project for years. They even joined a federal lawsuit to stop preliminary work from going forward while they completed their own environmental review, which was finished last spring.

Then last week Tom Landwehr, commissioner of the Department of Natural Resources, announced that the state would not grant a permit for the dam on Minnesota's side of the project. It didn't meet Minnesota's environmental laws or standards, he said. Instead, Minnesota suggested that current and planned flood mitigation projects around Fargo, in combination with emergency measures like sandbagging and evacuation, were more likely to be in the public interest.

'Shifts the burden'

Vanyo said the Diversion Authority and the Army Corps will keep talking with Minnesota officials to try and resolve differences. But the document Landwehr provided to support the DNR's decision suggests they may be insurmountable.

More than half the area that would be protected by the dam and diversion channel is now flood plain that would be open to development in the future, the document says. But dams "can, and do, fail," the DNR said. "Allowing development in vulnerable areas would increase the consequences of a dam failure. ..."

The DNR said the corps has underestimated the number of potential deaths if the dam were to fail and exaggerated the time Fargo would have to evacuate in such an event.

Peterson pointed out that Minnesota hasn't approved a new high-hazard dam in decades. "It's one thing when you've got a flood and it comes up slowly and you can deal with it," he said. "But it's another if you're behind a 20- or 30-foot-high dam and it breaks and water rushes through."

The DNR also noted that the Diversion Authority would be financially liable for a dam failure but questioned whether the quasi-governmental organization has sufficient financial wherewithal to pay.

In addition, the DNR argues that the Army Corps overestimated the financial benefits to the community by at least $41 million. The claimed benefits are "misleading" because they include flood control projects that would occur with or without the diversion project and improperly include temporary economic impacts of constructing the project itself.

In short, the DNR said, "The proposed Project … simply shifts the burden of flooding from one sparsely developed rural area to another."

Melissa Samet, an attorney with the National Wildlife Federation familiar with the Army Corps, said Congress has expressly discouraged projects that alter the natural processes of rivers, result in the unwise use of flood plains, or encourage development into undeveloped areas.

"And this project absolutely does that," she said.

The DNR argues that the vast majority of Fargo's developed area is already protected by existing or planned flood projects and that remaining areas can be protected in an emergency the way Fargo has always done it — with evacuations and sandbagging.

But that's cold comfort to the people of Fargo, who look at every spring thaw with trepidation, said local officials. They say thousands of Fargo's buildings are at risk if rising flood projections come true and relying on a strategy of business as usual is dangerous.

"Are we going to flood this spring?" Fargo Mayor Tim Mahoney said, describing residents' mind-set in a radio interview this week. "We think people are tired of sandbagging."

Work to resume on Dakota Access Pipeline near Lake Oahe

By Mike Nowatzki Today at 9:34 a.m.

BISMARCK – The company building the Dakota Access Pipeline said Tuesday, Oct. 11, it looks forward to a “prompt resumption” of construction near Lake Oahe and hopes the federal government will assist local law enforcement officials dealing with protests of the pipeline.

Dallas-based Energy Transfer Partners released a statement saying it is pleased with a federal appeals court decision Sunday denying the Standing Rock Sioux Tribe’s request for an emergency injunction to stop construction of the $3.8 billion, 1,172-mile pipeline that will carry 470,000 barrels of crude oil per day from North Dakota to Illinois.

The three-judge panel in Washington, D.C., also lifted a temporary suspension of construction activities within 20 miles east and west of Lake Oahe, a dammed section of the Missouri River.

“In light of Sunday’s court decision, Dakota Access looks forward to a prompt resumption of construction activities east and west of Lake Oahe on private land. We reiterate our commitment to protect cultural resources, the environment and public safety,” the company said.

Company spokeswoman Vicki Granado declined to specify when the company will resume construction in the 20-mile area, which includes the area along Highway 1806 where protest activities to block pipeline construction began Aug. 10. An estimated 2,500 to 3,000 American Indians and other pipeline opponents are encamped along the highway and have drawn international support.

The proposed construction area also includes a stretch west of Highway 1806 that was bulldozed on Sept. 3, the day after the Standing Rock Sioux Tribe filed court documents identifying that part of the route as containing burial grounds and other sacred sites. Angry protesters clashed with the pipeline’s private security that day, with both sides claiming injuries, and a joint law enforcement task force is investigating the incident.

Last week, state archeologists concluded that no sacred sites were destroyed, but the tribe disputes that conclusion because its historic preservation officer wasn’t allowed to participate in the survey. The tribe’s ongoing lawsuit against the U.S. Army Corps of Engineers contends the agency didn’t properly consult the tribe before granting permits for the project.

Energy Transfer Partners said the decisions by two separate federal courts show otherwise.

“The Army Corps and Dakota Access carefully considered the views of all potentially affected tribes that chose to participate in the consultative process prescribed by Congress, and fully complied with both the letter and the spirit of the National Historic Preservation Act,” the company said. “Their careful and sensitive work has been reviewed and approved by highly qualified private and state-employed archeologists.”

The pipeline was 87 percent completed in North Dakota at the end of September and is largely completed in South Dakota, Iowa and Illinois.

“We continue to believe that the Army Corps will soon issue the easement for approximately 1,100 feet necessary for the crossing beneath the Missouri River – the sole remaining authorization necessary for completion of the project,” the company said.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it won’t authorize pipeline construction on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The three agencies asked that the company voluntarily pause construction within 20 miles of the lake.

The company on Tuesday urged that any protests “be undertaken in a peaceful and law abiding manner.” Authorities arrested 27 protesters at two construction sites Monday, including actress Shailene Woodley, bringing the total number of arrests to 123.

“All construction efforts will be undertaken in close coordination with state and local law enforcement officials, and we are hopeful their law enforcement efforts will be supplemented by those of the federal government,” the company said.

State officials and lawmakers have decried the lack of financial and law enforcement support from the federal government, given that the Corps is withholding the lake-crossing easement and allowing protesters to camp on Corps-owned land. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs, and Monday’s response involved deputies from Wisconsin – the first time out-of-state officers have been used.

Actress Woodley released from jail after arrest at Dakota Access protests

By Mike Nowatzki on Oct 10, 2016 at 9:59 p.m.

ST. ANTHONY, N.D. – Authorities arrested Hollywood actress Shailene Woodley and 26 other protesters at two Dakota Access construction sites in Morton County on Monday, Oct. 10, as pipeline opponents vowed to keep disrupting the project after an appeals court ruling Sunday that allows work to resume on a 20-mile stretch west of Lake Oahe.

Despite the court’s ruling, the U.S. Army Corps of Engineers said Monday it won’t authorize construction of the $3.8 billion pipeline on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The Corps also repeated its request that Dakota Access LLC voluntarily pause all construction activity within 20 miles east or west of the lake. A company spokeswoman did not return a message seeking comment.

Monday marked the most arrests in one day since protests of the four-state, 1,172-mile pipeline began two months ago just north of the Standing Rock Sioux Reservation, where tribal members fear the pipeline will leak and contaminate their water supply and destroy sacred sites on ancestral lands.

Authorities were notified about 7:15 a.m. Monday that two protesters had attached themselves to construction equipment about 2 miles southwest of St. Anthony, Morton County Sheriff’s

Department spokesman Rob Keller said. Both were arrested for felony reckless endangerment, and a third person filming the event also was arrested, he said.

A few miles south along Highway 6, about 200 protesters converged on the west side of the road where the pipeline is strung but not yet buried, including Woodley, who live-streamed video of the protest on Facebook. The star of the "Divergent" film series was arrested at 12:05 p.m. on suspicion of criminal trespass and engaging in a riot, the same basis for most of the 27 arrests, said Cass County Sheriff Paul Laney, operations chief.

Woodley was released on $500 bond about 3:30 p.m. Her next court appearance will be Oct. 24.

Protesters erected an uncovered teepee in the pipeline corridor, and more than a dozen people who locked arms inside it were arrested. The 27 arrests brings the total to 123 so far. More than 100 law enforcement officers, many of them wearing riot gear, responded to the scene, directing protesters back across the fence line and forming a human barricade to keep them off the construction site. Protesters formed their own line less than 10 feet away, holding signs, pounding drums and yelling refrains such as "Respect our land, respect our water, honor our treaties." "They plan to continue building, and we plan to continue to disrupt," a protester declared through a bullhorn. No physical violence was reported. But Laney disputed claims that it was a peaceful protest, noting protesters used threatening speech, refused to leave when asked and, at one point, surrounded a deputy who was arresting a protester, forcing another deputy to break up the circle. "This was not a protest," he said. "This was a riot." Watch the video below to see Woodley's arrest. Fast-forward to the last five minutes of the video to see the arrest.

Robby Romero, an Apache from Taos, N.M., criticized what he described as the militarized police response, complete with an armored Mine-Resistant Ambush Protected vehicle parked at the top of the hill on Highway 6 overlooking the protest. "This is a crazy response to a peaceful resistance to something that is so dangerous to all life," he said, adding, "We will win this fight, peacefully. We come with prayer and feathers. They come with weapons of destruction." Both protests took place outside the 20-mile zones east and west of the Missouri River at Lake Oahe where a federal appeals court had ordered Dakota Access LLC to pause construction while the court decided on the Standing Rock Sioux Tribe's request for an emergency injunction. The three-judge panel in Washington, D.C., issued a ruling Sunday rejecting the tribe's request and dissolving the 20-mile, no-work zone.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it hopes to conclude its review soon. The agencies said they "continue to respect the right to peaceful protest and expect people to obey the law." "We also look forward to a serious discussion during a series of consultations, starting with a listening session in Phoenix on Tuesday, on whether there should be nationwide reform on the Tribal consultation process for these types of infrastructure projects," they said.

Officers from Wisconsin assisted in Monday's response. Schools in nearby St. Anthony and Flasher went on lockdown. Laney said the 200 to 300 protesters who took part are a "distinct" group within the 2,500 to 3,000 mostly peaceful people camping along Highway 1806 about 25 miles away near the confluence of the Missouri and Cannonball rivers. He said protesters' message has been heard “loud and clear” over the last 62 days, but added “the courts have ruled” and the company has a legal right to do construction. “If their determination is that they’re going to … do everything they can to stop this work, I guess we’re going to be here for a while,” he said.

SOUTH DAKOTA:

Fort Randall Dam Passed Test Posed By Historic 2011 Flood (Yankton Daily)

BY RANDY DOCKENDORF randy.dockendorf@yankton.net | 0 comments

EDITORS’ NOTE: The following is part of a series of periodic articles on the fifth anniversary of the 2011 Missouri River flood, its aftermath and a look at the present and future.

For Tom Curran, the 2011 Missouri River flooding at Pickstown forced him to take unprecedented action.

The Fort Randall Dam project manager opened up all the flood tunnels to handle the torrent of water.

“We had releases of 156,000 cubic feet per second (cfs),” he said. “It was the first time in the history of the dam that we fully opened all four flood tunnels.”

The 2011 releases – which amounted to one million gallons per second – more than doubled the old record of 67,000 cfs during 1997 flooding.

When it came to moving the flood water, the first preference was to run the flow through the Fort Randall power plant to gain hydropower, Curran said. The eight turbines produce a combined 320 megawatts of power.

Fort Randall produces enough power for a city of 250,000 people, according to U.S. Army Corps of Engineers estimates.

“We continued to run our hydropower (during the flood),” Curran said. “We put out about 40,000 cfs through the power plant. The powerhouse was generating full capacity for those three months.”

Besides hydropower, the alternatives were running the water through the flood tunnels, spillway or a combination of both.

Fort Randall, completed in 1956, stands slightly more than two miles wide, at 10,700 feet, and 165 feet tall with a 140-foot water fall. Lake Francis Case runs for 107 miles behind the dam and backs up to the Big Bend Dam.

Fort Randall forms part of the Missouri River system of dams, Curran said. As such, the six dams need to remain in coordination for moving the flood water.

“The dams work together as a whole. They balance what each reservoir can hold and the flow each one can put through the power plant,” he said.

“Each one is a little bit unique, but they operate as a system. When the upper reservoirs are near their capacity, the rest of the water has to be moved downstream through all the dams.”

LIFE CHANGES

The flood affected all facets of life up and down the river, Curran said.

The Corps provided technical assistance to the Yankton Sioux Tribe amidst its flooding concerns, he said. Charles Mix County and the tribe had sustained $1 million in damages during previous flash flooding, and tribal members were displaced from their homes.

Most tribal members lived in homes on bluffs or other sites protected from the Missouri River flooding in 2011, Curran said. However, the Corps did warn tribal members about the dangers of bank erosion caused by the flooding, he said.

Downstream, the flooding inundated farmland, primarily in Charles Mix and Bon Homme counties on the South Dakota side of the river. On the Nebraska side, the river flooded housing developments such as Lazy River Acres.

The Nebraska Department of Roads (NDOR) closed stretches of Highway 12 east and west of Niobrara, Nebraska, throughout the summer. As a result, traffic was diverted and commuters and first responders were forced to find alternative routes.

The flooding didn’t shut down Niobrara State Park, Niobrara, Chief Standing Bear Memorial Bridge or the Ohiya Casino. However, a number of travelers avoided the area because they encountered accessibility problems or mistakenly thought those sites were closed.

As a result, the economy – tourism, retail businesses, restaurants and bars – took a major hit.

While traditional tourism may have suffered in some areas, Fort Randall Dam saw an influx of a different type of visitor, Curran said.

“We had people from all over the country who wanted to see what the water looked like (when it was) that high and when it was released,” he said. “Our people (with the Corps) were visiting with people every day (about the flood). We had longer hours every day just because people were coming through, looking and asking questions. We also had questions about the reservoirs and parks.”

In addition, the Corps worked with conservation agencies on issues dealing with wildlife, Curran said. The Corps also monitored the changing course of the Missouri River and the increased sedimentation caused by the flooding, he said.

Lake Francis Case and Lewis and Clark Lake remained open for recreation, Curran said. However, flooding affected area campgrounds, boat ramps and other sites.

“As a reservoir, we had record pool levels in 2011. We were pretty much a half-foot from being totally full,” he said. “A lot of recreational facilities were flooded at that level, and a lot of the recreation areas were closed.”

The Missouri River and Lake Francis Case saw a great deal of pent-up demand the following year, Curran said. The boating and fishing numbers soared after the flooding.

“It was really busy in 2012,” he said. “Things really picked up and rebounded that year.”

LESSONS LEARNED

In 2012, the Corps embarked on a number of projects as part of regular maintenance and from the flooding. The inspections looked at the gates, cables, spillway and embankment.

Curran, who has worked at Fort Randall since 1999, said he has always remained confident about the stability of the dam and reservoir. His confidence was reinforced during and after an unprecedented event such as the 2011 flooding, he said.

Fort Randall handled the stress despite months of intense flood pressure on the dam, he said.

“That was kind of the test. The dam held up great. We did really well with no operation problems,” he said. “Afterwards, we had a really thorough survey of everything, and it was just the normal wear-and-tear items. We worked after the flood to see if everything was in good shape and if we’re ready to go should this (flood) ever happen again.”

In that respect, the flood showed the dam’s capability, Curran said.

“It was interesting to see what would happen during a high-water event,” he said. “The flood pushed everything to its limits, but there really wasn’t anything that stuck out as a problem or issue.”

Col. John Henderson, the Omaha District commander for the Corps of Engineers, visited Fort Randall Dam earlier this year.

Henderson reflected on the fifth anniversary of the 2011 flood and emphasized the importance of two-way communication between the Corps and stakeholders, according to a Corps publication.

“I think the timing of this trip is appropriate since we are only five years removed from the single most significant hydrological event to occur in this basin in the last 100-plus years,” he said.

“One of the key lessons learned following that event was the need for an ongoing commitment to open and frank dialogue throughout the basin. This inspection trip is an example of our efforts to maintain that dialogue.”

Curran still sees and hears about the flood’s impact from those most affected by it.

“I think there are some people who were intimately involved with the high water and flooding who haven’t forgotten about it,” he said. “But there are other areas where things are improving. People are doing some of the things they had always planned to do, and it looks nice.”

Echoing Henderson’s sentiment, Curran said the flood showed the importance of communicating with all people up and down the river.

“As far as what was learned, I would say communication and getting the word out, again and again, to let people know what to expect,” he said.

“We’re working to provide people with a better understanding of how the dams and reservoir system work. We want them to have an understanding if anything like this (flooding) should ever happen again.”

STORIES

COLORADO:

Mine rescue training, emergency preparedness grants awarded (KOAA TV 5)

MORGANTOWN, W.Va. (AP) - Six groups will share $1 million in grants to develop training for emergency preparedness and accident prevention in underground mines.

The U.S. Mine Safety and Health Administration announced the Brookwood-Sago grants last week.

Receiving grants are the University of Arizona, the Colorado School of Mines, the Colorado Department of Natural Resources, Rend Lake College in Ina, Illinois, the Virginia Department of Mines, Minerals and Energy, and West Virginia University.

WVU says in a news release that the university will use a grant of nearly $172,000 to integrate fire brigades and mine rescue teams in an emergency involving fire and trapped miners.

The grant program is named in remembrance of 25 men who died in mining explosions in Alabama in 2001 and at the Sago Mine in West Virginia in 2006.

Colorado group helping Haiti rebuild after hurricane (FOX 31 Denver)

LOUISVILLE, Colo. – A Colorado nonprofit dedicated to rebuilding rural Haiti is asking for some emergency donations following Hurricane Matthew.

The Colorado Haiti Project has been doing work in Petit-Trou-de-Nippes for almost 30 years. The group focuses on long term rebuilding projects like education, agriculture, livelihood and clean water.

CHP has one dedicated project manager living in Haiti full-time. The Louisville based organization sends several groups throughout the year to do aid work.

They built a school that serves nearly 400 Haitian children. The school suffered major damage in the storm.

“When you look inside any room everything is just thrown all over the place,” explained CHP’s Teresa Henry. “Now they have no books and everything in the classrooms is gone.”

Her co-worker who is in Haiti right now says about half of the community's homes are gone. She also says almost all of the crops have been leveled and most of the livestock has perished.

"They don't have bank accounts. In Haiti, you consider your bank your goats and cows. That is your income," Henry said. "All their crops have been lost. All of it. They have nothing for their livelihood."

She worries if they can't help Haitians rebuild fast enough, the region will eventually starve.

"We're concerned about making sure they eat enough through the winter so getting the crops back in the ground is huge," she said.

CHP is doing several emergency fundraisers to help their Haitian community rebuild and replant. You can visit their website to donate and find more information about local fundraising opportunities.

The money will go directly to the small rural communities where Coloradan are helping rebuild by hand. Their project manager in Haiti will return to Colorado later this week and CHP will decide within the next two weeks a rebuild plan-of-action for the next 12 months.

The group believes donating to them is a good way for Coloradans to see exactly where their money is going and how it is being used.

"You can be like one degree away from where you make your donation," Henry said

Donation center set up for Beulah Hill Fire victims (Pueblo Chieftain)

October 11, 2016

A donation center for victims of the Beulah Hill Fire opened Sunday morning and plenty of donors had already walked through the doors and dropped items off by Monday afternoon.

Beulah Hill Fire at 95 percent containment; blaze expected to be fully contained by Sunday Free pain/injury screening for firefighters

Kathy Hayden of the Adventist Community Services Disaster Response Team said that by 2:30 p.m. Monday there had already been about 30 community members who had stopped by the donation center to bring items of need.

The donation center, located at the Colorado Building on the Colorado State Fairgrounds, was filled with clothing, kitchenware, blankets, sleeping bags, food, water, cleaning and laundry supplies, toilet paper, paper towels, assorted toiletries, tools, shoes and some toys.

A woman was seen Monday afternoon getting out of her car and bringing numerous bags of items to the donation center for victims of last week's Beulah Hill Fire, which burned 5,232 acres of land, destroyed eight homes and forced the entire Beulah Valley to be evacuated until some residents began returning on Wednesday and Thursday, and the rest on Friday.

Volunteers strolled the inside of the Colorado Building, sorting out donated items and organizing racks and shelves.

"It's wonderful to see so many people helping out and taking care of each other," Hayden said.

Beulah residents have been stopping by the donation center since Sunday morning to pick up needed items and can continue to do so.

"They've been really good about it," Hayden said. "They're just taking what they need."

The donation center is open daily from 10 a.m. to 7 p.m. through Sunday.

Hayden said the most needed items right now are children's clothing, food and tools.

"A lot of people lost tools," said Robyn Knappe, a voluntary agency liaison for the Colorado Division of Homeland Security & Emergency Management.

Hayden, who thanked firefighters and emergency crews for their tireless work in battling the blaze, said she's happy the disaster response team can play a role in helping families who lost so much in the wildfire.

"At least maybe we can do something to help put their lives back together," she said.

ryans@chieftain.com

Public encouraged to review new Estes Valley hydrology data Oct. 26 (Estes Park Trail Gazette)

Study contributes to a safer, more resilient community

Town of Estes Park - For the Trail Gazette

POSTED: 10/11/2016 09:38:17 AM MDT

The Town of Estes Park and its consultant, Wright Water Engineers, will present the results of a scientific hydrology study of the Big Thompson River, Black Canyon Creek, Dry Gulch and Fall River on Wednesday, Oct. 26, at 8 a.m. in the Town Board Room of Town Hall, 170 MacGregor Ave. Other topics discussed will be a preliminary map of new floodplain boundaries in the downtown area and how this study impacts floodplain management. The completion of the study is a milestone in the process of ensuring a safer, more resilient Estes Park community. Study results will be available for review at www.estes.org/floodmitigation by Oct. 21.

Educational resources on the hydrology study and other flood mitigation efforts are also posted to this site as they become available.

The Oct. 26 meeting is targeted to both a general interest audience and particularly those concerned with development and flood mitigation opportunities, as the hydrology data is part of the floodplain permitting process. Wright Water Engineers will present the results and be available to answer both general and technical questions. Staff from the Colorado Water Conservation Board will discuss preliminary floodplain maps and staff from the Colorado Resiliency and Recovery Office will be in attendance to answer questions. This meeting will be streamed live on local cable channel 12 and via www.estes.org/videos. It will also be recorded for viewing later via www.estes.org/videos. The Town Board will review the information during a study session the evening of Oct. 25.

The 2013 flood was a stark reminder of flood risk, and the Town is taking action to better understand the hazards Estes Park's residents face. The hydrology study results will serve as the basis of flood mitigation projects and a key part of future flood mitigation decisions. In addition, the new information may help the Town receive grants. It will also provide data for new floodplain maps, which will go into effect in the coming years.

The Town will also host a workshop for realtors, lenders and insurance agents on flood insurance topics presented by FEMA staff Oct. 24, from 10 a.m. to noon at the Estes Park Museum, 200 4th St.

For more information on flood mitigation efforts, please visitwww.estes.org/floodmitigation or contact Floodplain Manager and Planner Tina Kurtz at 970-577-3732 or tkurtz@estes.org.

Lyons residents: 'We're just starting to get it together' (Boulder Daily Camera)

Federal scrutiny stirs concern in town that has struggled

By Amelia Arvesen
Staff Writer

The town of Lyons has submitted to more than one waiting game.

People there have been waiting to rebuild their town and now they're waiting on a federal investigation into the flood-recovery process.

"I'm frustrated because I'd like to know what's going on instead of waiting," longtime resident Craig Ferguson said. "There's been a lot of waiting for three years."

As Lyons entered its fourth year of reconstruction following the devastating September 2013 flood, the FBI and U.S. Department of Housing and Urban Development stopped by to seize documents and computers to probe the handling of federal flood-recovery funding.

Communities savaged by the rushing waters have been receiving fund allocations, totaling millions of dollars from several federal sources, such as HUD and the Federal Emergency Management Agency.

Late Friday, Mayor Connie Sullivan released a statement on behalf of the town's Board of Trustees, stating that the FBI had concluded its portion of the investigation and would not be proceeding with a case.

Also posted to the town's website was a copy of a subpoena from the U.S. Department of Housing and Urban Development, stating that a focus of its investigation was documents relating to negotiations and grant services contracts between Lyons and Longmont-based Front Range Land Solutions.

The subpoena also seeks all "invoices, bills, receipts, and other documents" reflecting charges or payments with respect to that company and its owner, Rosi Dennett.

Dennett, who could not be reached for comment Friday night, identifies herself on her Linkedin page as having served as Town Planner for Lyons from April 2004 to December 2008.

Ferguson, Planet Bluegrass president, said before the flood the town could only fathom a budget of $1 million per year, and suddenly they were expected to keep track of exponentially more in the midst of disaster.

"To take care of that is a completely different job," Ferguson said. "Mistakes might have been made. Personally, I guess, I'm kind of hoping that things can be corrected quickly and it's not personal."

Apparently as a precaution into the investigation's integrity, both the town administrator and clerk were placed on temporary leave and replaced in the interim. Sullivan has said the move should not be construed as a suspicion of wrongdoing by those employees.

Ferguson said he knows most town officials well after living in Lyons 25 years and he said he has a hard time believing there was any foul play.

A hope 'someone is held accountable'

On Friday, LaVern Johnson sat under a shade of an awning behind her house, where she hosted a yard sale benefitting the Lyons Historical Society.

"Why Lyons?" Johnson asked.

She said many people are upset, saddened and disappointed by the mayor's brief and formal announcement Wednesday night at Town Hall that provided little information.

"I would say they could've made mistakes somewhere," Johnson said. "I don't think they did anything that is illegal as to taking money and those kinds of things. I don't know what they're after. I don't know how they could abscond with any money."

A man who did not provide his name and who lives in Lyons' Confluence neighborhood — an area that was hit hard by the flood — said nobody would be interested in what he has to say on the issue.

"I hope someone is held accountable," he said.

At The Stone Cup in downtown Lyons, employee and resident of 12 years Robin Young said she has worked eight hours five days in a row and that the topic has come up. She said the town chatter is that people are frustrated with the lack of information, but also understand that town officials can't say too much yet.

"There's great, great people here and it's been a long three years," Young said. "But I believe, from what I've heard, people are taking a wait-and-see approach and are just anxious."

Ferguson said while the investigation is somewhat a blemish on trust, he is confident the mayor and town board were doing their best and he would be surprised if it involved criminal behavior.

"We just don't need that right now," he said. "We're just starting to get it together."

Johnson said she trusts the town officials. She is confident they've done everything they can in light of the devastation the community has been through.

"With things like this going on, I don't think we can ever recover," Johnson said. "How can you recover when somebody is going to accuse you? I think it's sad."

Johnson said she is also surprised by how much the town has accomplished, such as designing Bohn Park. She said as the town works on the budget, it's not taking on new project proposals, and sticking to the 2016 budget when planning for next year.

A punch in the gut

The continuous beeping of construction vehicles working on streets nearby echoed through the neighborhoods. Sections of streets were peeled back, revealing the dirt below.

Jenny Voss, out walking her dog near the former Foothills Mobile Home Park, said she did not know more than what has already been revealed.

Carrie Davis-Gonzales, who lost her mobile home near the creek, was watching broadcast news reports about the hurricane in Florida Friday afternoon. She moved three years ago to the only remaining home in the park.

In response to the recent investigation of Lyons, she said she is more unquestioning than maybe she should be. She said as a result of trying to rebuild a mobile home park, she has researched and discovered similar federal investigations into devastated towns — from the benign to the extreme.

"From the outside, I can't really say what's going on in there but it could be so tiny because they are extremely meticulous," she said.

It would be difficult to screw up, she said, and wrongdoing would be even harder.

"It's not back in the day where they'd come in with money bags — this is all done electronically," Davis-Gonzales said, sitting on her front porch with a view of the abandoned mobile homes.

State Rep. Jonathan Singer, the Longmont Democrat whose House District 11 includes Lyons, said over the phone it's just another punch in residents' gut — another reminder that they haven't bounced back 100 percent from where they were more than three years ago.

"People are sort of worn down and worn out," Singer said. "They haven't given up but it's really hard to hear from another person, 'Well I know you don't want to hear this but we need to follow this new process.' Obviously that's going to wear anyone out."

He said some people still haven't been able to return home, and some people may never get to.

And while, Davis-Gonzales has been living in the only home left on the mobile home property, she is living each day thinking the next could be her last in Lyons, since the park owner recently opted for the buyout. Her home for the last three years will eventually be leveled.

Singer said he hopes whatever is under review is as simple as a paperwork error.

"If it is something else, I hope we find out very quickly and then we can move on and we can move forward," he said.

Ferguson said it's been easy for a lot of people to be angry at the slow progress, but he knows realistically the process is complicated.

"I'm sure once they know, they'll want to inform us," he said. "I think when someone comes into your place with a subpoena you need to take three or four days to figure out what it means. I know I would."

MONTANA:

Montana Red Cross volunteer helping in wake of Hurricane Matthew (KTVQ-Billings)

Posted: Oct 08, 2016 11:08 AM MST Updated: Oct 08, 2016 11:14 AM MST
By MTN News

KALISPELL - While millions try to escape Hurricane Matthew, Red Cross volunteers are racing into the storm to help with relief efforts, including Joe Kingan with the Flathead County chapter of the American Red Cross.

Kingan had nothing but a cell phone and a bag of survival gear as he waited at Glacier International Airport for his flight.

"Got my headlamp got flashlights, that kind of stuff."

He's been deployed to Hurricane Matthew by the **American Red Cross**, but for the husband and father, perhaps what's most important is his endurance in facing the unknown.

"They want me to go and help, and they're concerned about the safety aspects as well as I am," Kingan said.

The National Weather Service has warned that some places hit by Hurricane Matthew could be uninhabitable for "weeks or months." Kingan will be teaming up with two to four other volunteers to assess the damage.

"We would be recording it and putting it into a database file that actually gets shared with FEMA, other government agencies, Salvation Army, and that data will be used to evaluate future assistant needs," he said.

Kingan said that one tool in particular will play a key role in staying safe as he heads into the danger zone: his smartphone.

"They keep us updated on a regular basis on what's going on in the immediate area where we're located. For example, a while ago I got a text message coming in that alerted us to a tornado warning out in one of the counties in Florida right now with one of the rain bands coming off the hurricane."

Although he leaves a wife and a son behind, he is carrying them with him in spirit.

"We will endure," Kingan concluded. "We like helping other people, so it will be well worth our trip down."

If you would like to join the cause, you can donate blood, text "RedCross to 90-999" to make an automatic $10-dollar or call 1-800-RED-CROSS.

NORTH DAKOTA:

New disaster app can help small businesses prepare for the worst (High Plains Journal)

The sprinklers go off by mistake in your office building. A strong wind blows the roof off your lab. You lose all of your computer files in a major crash.

If you own or manage a small business, a disaster like any one of these could put a major dent in your work and your bottom line.

A new phone app won’t fix such problems, but could help a business start operating again more quickly and easily.

The Small Business Disaster Plan app is available free for iOS and Android tablets and smartphones. It was developed by the North Dakota State University Extension Service and Myriad Mobile, Fargo, N.D.

“We used FEMA’s ready.gov information for businesses and the Extension Disaster Education Network’s Ready Business training program to integrate with the functionality of the tablet and smartphone,” said Bob Bertsch, the NDSU web technology specialist who led work on the app’s content. “Yes, there are online templates for business disaster plans, but this app provides portability and functionality.”

The Extension Disaster Education Network is a collaboration of land grant universities focused on reducing the effect of disasters through education. Kansas State University is a part of EDEN and shares preparedness tips on its Prepare Kansas blog.

“There are two things that I have heard small-business owners say repeatedly: The first is they never have enough time. And the second is, ‘Where did I file that?’” said Glenn Muske, NDSU Extension rural and agribusiness enterprise development specialist.

The Small Business Disaster Plan app takes on both of those, Muske said, by letting you fill out important disaster plan information, along with supporting photos right from your smartphone or tablet – which you always have with you.

“Of course, you should save the information in the cloud, too, in case your phone or tablet is lost,” he added.

The app lets you enter information for your business, including basic and contact information, emergency planning, evacuation, insurance information and more.

Plans should be reviewed annually, Muske said, so the app uses your phone’s alerts to remind you to review the information at a designated time in the future.

The content can be downloaded as a csv file. The app also encourages you to upload the content to a cloud service such as Dropbox, iCloud, Drop or a similar service for backup.

“Planning is never high on anyone’s list,” Muske said. “But think how easy the process is when the structure is there and you just need to fill in the blanks. That’s exactly what this Small Business Disaster Plan app provides. And because September is National Preparedness Month, it’s a great time to get your business prepared for disasters.”

Development of the Small Business Disaster Plan app for tablets and smartphones was supported by a grant from the National Institute of Food and Agriculture, U.S. Department of Agriculture.

Minnesota, North Dakota at a standoff over $2 billion Red River project (Star Tribune)

By Josephine Marcotty and Jennifer Brooks Staff writers

A long-simmering fight between Minnesota and North Dakota has broken wide open now that Gov. Mark Dayton has drawn a line down the middle of the Red River by refusing to allow a massive flood diversion project to go forward on his side of the border.

Residents and local leaders in Fargo are outraged at what they say is his administration's cavalier advice to keep sandbagging in the face of ever higher threats of flooding. The U.S. Army Corps of Engineers and even the mayor of the Minnesota city Moorhead came out swinging last week, vowing to press ahead with the $2.1 billion project.

While proponents say they want to keep talking with Minnesota, the depth of the disagreement about the value and safety of the diversion project is so profound that, other than a legal battle, there is no apparent resolution in sight.

"If there is a confrontation, there will be a confrontation," said Darrell Vanyo, executive director of the Fargo-Moorhead Diversion Authority. He said the U.S. Army Corps of Engineers has all the authority it needs to build a high-hazard dam and flood thousands of acres of mostly farmland on the Minnesota side of the river in order to protect the Fargo-Moorhead urban areas.

But attorneys for residents who have been fighting the project in federal court say that decision would have to be made in Washington, D.C. And riding roughshod over Minnesota, they say, would require strong congressional support.

"The Army Corps, thankfully, is not the king of the United States," said Jerry Von Korff, the attorney representing upstream communities that would be flooded if the project went forward as planned.

And so far, while Congress has approved the project, it's only provided $5 million of the $450 million in federal funds that are part of the deal.

"Just the fact that you've got a lawsuit going on is going to make it difficult to get federal money," said U.S. Rep. Collin Peterson, whose district is bordered by the Red River. "It's hard enough to get things funded without having controversy."

But project supporters didn't seem to heed clear warnings, going back more than a year, that Minnesota was unlikely to grant them the permit they need.

A year ago, Peterson met with diversion officials.

"I asked them, 'What is your Plan B if Minnesota denies the permit?' ”he said.”And they said, 'There is no Plan B.' "

51 floods in 113 years

There is widespread agreement that Fargo needs protection from floods — the question is how.

The Red has flooded 51 of the past 113 years, causing millions of dollars in damage to homes and businesses around Fargo and the region. Across the river, Moorhead sits 4 feet higher and is protected by $130 million worth of walls, dikes and levees that Minnesota has put in place over the years.

After the most recent flood, in 2009, local North Dakota governments asked the U.S. Army Corps of Engineers to come up with a long-term plan. And it came up with a big one.

The Corps would carve a 36-mile ditch around Fargo and build flood control dams across the Wild Rice and Red rivers. In the event of a flood, water from the Red and its five tributaries would be diverted away from Fargo — the region's bustling economic hub — and into miles of North Dakota and Minnesota farmland and prairie.

North Dakota would pay $1.2 billion of the cost and Minnesota would pay $100 million.

If the project goes ahead, a net increase of 2,000 acres in Minnesota would be at risk of flooding. But across the river, many more thousands of acres would be left high and dry and ripe for construction of homes, schools and businesses.

A crucial piece: Construction of what Minnesota officials describe as a "high-hazard" dam across the Red — the kind that would cause catastrophic damage if it fails.

Minnesota officials have been critical of the project for years. They even joined a federal lawsuit to stop preliminary work from going forward while they completed their own environmental review, which was finished last spring.

Then last week Tom Landwehr, commissioner of the Department of Natural Resources, announced that the state would not grant a permit for the dam on Minnesota's side of the project. It didn't meet Minnesota's environmental laws or standards, he said. Instead, Minnesota suggested that current and planned flood mitigation projects around Fargo, in combination with emergency measures like sandbagging and evacuation, were more likely to be in the public interest.

'Shifts the burden'

Vanyo said the Diversion Authority and the Army Corps will keep talking with Minnesota officials to try and resolve differences. But the document Landwehr provided to support the DNR's decision suggests they may be insurmountable.

More than half the area that would be protected by the dam and diversion channel is now flood plain that would be open to development in the future, the document says. But dams "can, and do, fail," the DNR said. "Allowing development in vulnerable areas would increase the consequences of a dam failure. ..."

The DNR said the corps has underestimated the number of potential deaths if the dam were to fail and exaggerated the time Fargo would have to evacuate in such an event.

Peterson pointed out that Minnesota hasn't approved a new high-hazard dam in decades. "It's one thing when you've got a flood and it comes up slowly and you can deal with it," he said. "But it's another if you're behind a 20- or 30-foot-high dam and it breaks and water rushes through."

The DNR also noted that the Diversion Authority would be financially liable for a dam failure but questioned whether the quasi-governmental organization has sufficient financial wherewithal to pay.

In addition, the DNR argues that the Army Corps overestimated the financial benefits to the community by at least $41 million. The claimed benefits are "misleading" because they include flood control projects that would occur with or without the diversion project and improperly include temporary economic impacts of constructing the project itself.

In short, the DNR said, "The proposed Project … simply shifts the burden of flooding from one sparsely developed rural area to another."

Melissa Samet, an attorney with the National Wildlife Federation familiar with the Army Corps, said Congress has expressly discouraged projects that alter the natural processes of rivers, result in the unwise use of flood plains, or encourage development into undeveloped areas.

"And this project absolutely does that," she said.

The DNR argues that the vast majority of Fargo's developed area is already protected by existing or planned flood projects and that remaining areas can be protected in an emergency the way Fargo has always done it — with evacuations and sandbagging.

But that's cold comfort to the people of Fargo, who look at every spring thaw with trepidation, said local officials. They say thousands of Fargo's buildings are at risk if rising flood projections come true and relying on a strategy of business as usual is dangerous.

"Are we going to flood this spring?" Fargo Mayor Tim Mahoney said, describing residents' mind-set in a radio interview this week. "We think people are tired of sandbagging."

Work to resume on Dakota Access Pipeline near Lake Oahe

By Mike Nowatzki Today at 9:34 a.m.

BISMARCK – The company building the Dakota Access Pipeline said Tuesday, Oct. 11, it looks forward to a "prompt resumption" of construction near Lake Oahe and hopes the federal government will assist local law enforcement officials dealing with protests of the pipeline.

Dallas-based Energy Transfer Partners released a statement saying it is pleased with a federal appeals court decision Sunday denying the Standing Rock Sioux Tribe's request for an emergency injunction to stop construction of the $3.8 billion, 1,172-mile pipeline that will carry 470,000 barrels of crude oil per day from North Dakota to Illinois.

The three-judge panel in Washington, D.C., also lifted a temporary suspension of construction activities within 20 miles east and west of Lake Oahe, a dammed section of the Missouri River.

"In light of Sunday's court decision, Dakota Access looks forward to a prompt resumption of construction activities east and west of Lake Oahe on private land. We reiterate our commitment to protect cultural resources, the environment and public safety," the company said.

Company spokeswoman Vicki Granado declined to specify when the company will resume construction in the 20-mile area, which includes the area along Highway 1806 where protest activities to block pipeline construction began Aug. 10. An estimated 2,500 to 3,000 American Indians and other pipeline opponents are encamped along the highway and have drawn international support.

The proposed construction area also includes a stretch west of Highway 1806 that was bulldozed on Sept. 3, the day after the Standing Rock Sioux Tribe filed court documents identifying that part of the route as containing burial grounds and other sacred sites. Angry protesters clashed with the pipeline's private security that day, with both sides claiming injuries, and a joint law enforcement task force is investigating the incident.

Last week, state archeologists concluded that no sacred sites were destroyed, but the tribe disputes that conclusion because its historic preservation officer wasn't allowed to participate in the survey. The tribe's ongoing lawsuit against the U.S. Army Corps of Engineers contends the agency didn't properly consult the tribe before granting permits for the project.

Energy Transfer Partners said the decisions by two separate federal courts show otherwise.

"The Army Corps and Dakota Access carefully considered the views of all potentially affected tribes that chose to participate in the consultative process prescribed by Congress, and fully complied with both the letter and the spirit of the National Historic Preservation Act," the company said. "Their careful and sensitive work has been reviewed and approved by highly qualified private and state-employed archeologists."

The pipeline was 87 percent completed in North Dakota at the end of September and is largely completed in South Dakota, Iowa and Illinois.

"We continue to believe that the Army Corps will soon issue the easement for approximately 1,100 feet necessary for the crossing beneath the Missouri River – the sole remaining authorization necessary for completion of the project," the company said.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it won't authorize pipeline construction on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The three agencies asked that the company voluntarily pause construction within 20 miles of the lake.

The company on Tuesday urged that any protests "be undertaken in a peaceful and law abiding manner." Authorities arrested 27 protesters at two construction sites Monday, including actress Shailene Woodley, bringing the total number of arrests to 123.

"All construction efforts will be undertaken in close coordination with state and local law enforcement officials, and we are hopeful their law enforcement efforts will be supplemented by those of the federal government," the company said.

State officials and lawmakers have decried the lack of financial and law enforcement support from the federal government, given that the Corps is withholding the lake-crossing easement and allowing protesters to camp on Corps-owned land. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs, and Monday's response involved deputies from Wisconsin – the first time out-of-state officers have been used.

Actress Woodley released from jail after arrest at Dakota Access protests

By Mike Nowatzki on Oct 10, 2016 at 9:59 p.m.

ST. ANTHONY, N.D. – Authorities arrested Hollywood actress Shailene Woodley and 26 other protesters at two Dakota Access construction sites in Morton County on Monday, Oct. 10, as pipeline opponents vowed to keep disrupting the project after an appeals court ruling Sunday that allows work to resume on a 20-mile stretch west of Lake Oahe.

Despite the court's ruling, the U.S. Army Corps of Engineers said Monday it won't authorize construction of the $3.8 billion pipeline on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The Corps also repeated its request that Dakota Access LLC voluntarily pause all construction activity within 20 miles east or west of the lake. A company spokeswoman did not return a message seeking comment.

Monday marked the most arrests in one day since protests of the four-state, 1,172-mile pipeline began two months ago just north of the Standing Rock Sioux Reservation, where tribal members fear the pipeline will leak and contaminate their water supply and destroy sacred sites on ancestral lands.

Authorities were notified about 7:15 a.m. Monday that two protesters had attached themselves to construction equipment about 2 miles southwest of St. Anthony, Morton County Sheriff's Department spokesman Rob Keller said. Both were arrested for felony reckless endangerment, and a third person filming the event also was arrested, he said.

A few miles south along Highway 6, about 200 protesters converged on the west side of the road where the pipeline is strung but not yet buried, including Woodley, who live-streamed video of the protest on Facebook. The star of the "Divergent" film series was arrested at 12:05 p.m. on suspicion of criminal trespass and engaging in a riot, the same basis for most of the 27 arrests, said Cass County Sheriff Paul Laney, operations chief.

Woodley was released on $500 bond about 3:30 p.m. Her next court appearance will be Oct. 24.

Protesters erected an uncovered teepee in the pipeline corridor, and more than a dozen people who locked arms inside it were arrested. The 27 arrests brings the total to 123 so far. More than 100 law enforcement officers, many of them wearing riot gear, responded to the scene, directing protesters back across the fence line and forming a human barricade to keep them off the construction site. Protesters formed their own line less than 10 feet away, holding signs, pounding drums and yelling refrains such as "Respect our land, respect our water, honor our

treaties." "They plan to continue building, and we plan to continue to disrupt," a protester declared through a bullhorn. No physical violence was reported. But Laney disputed claims that it was a peaceful protest, noting protesters used threatening speech, refused to leave when asked and, at one point, surrounded a deputy who was arresting a protester, forcing another deputy to break up the circle. "This was not a protest," he said. "This was a riot." Watch the video below to see Woodley's arrest. Fast-forward to the last five minutes of the video to see the arrest.

Robby Romero, an Apache from Taos, N.M., criticized what he described as the militarized police response, complete with an armored Mine-Resistant Ambush Protected vehicle parked at the top of the hill on Highway 6 overlooking the protest. "This is a crazy response to a peaceful resistance to something that is so dangerous to all life," he said, adding, "We will win this fight, peacefully. We come with prayer and feathers. They come with weapons of destruction." Both protests took place outside the 20-mile zones east and west of the Missouri River at Lake Oahe where a federal appeals court had ordered Dakota Access LLC to pause construction while the court decided on the Standing Rock Sioux Tribe's request for an emergency injunction. The three-judge panel in Washington, D.C., issued a ruling Sunday rejecting the tribe's request and dissolving the 20-mile, no-work zone.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it hopes to conclude its review soon. The agencies said they "continue to respect the right to peaceful protest and expect people to obey the law." "We also look forward to a serious discussion during a series of consultations, starting with a listening session in Phoenix on Tuesday, on whether there should be nationwide reform on the Tribal consultation process for these types of infrastructure projects," they said.

Officers from Wisconsin assisted in Monday's response. Schools in nearby St. Anthony and Flasher went on lockdown. Laney said the 200 to 300 protesters who took part are a "distinct" group within the 2,500 to 3,000 mostly peaceful people camping along Highway 1806 about 25 miles away near the confluence of the Missouri and Cannonball rivers. He said protesters' message has been heard "loud and clear" over the last 62 days, but added "the courts have ruled" and the company has a legal right to do construction. "If their determination is that they're going to … do everything they can to stop this work, I guess we're going to be here for a while," he said.

SOUTH DAKOTA:

Fort Randall Dam Passed Test Posed By Historic 2011 Flood (Yankton Daily)

BY RANDY DOCKENDORF randy.dockendorf@yankton.net | 0 comments

EDITORS' NOTE: The following is part of a series of periodic articles on the fifth anniversary of the 2011 Missouri River flood, its aftermath and a look at the present and future.

For Tom Curran, the 2011 Missouri River flooding at Pickstown forced him to take unprecedented action.

The Fort Randall Dam project manager opened up all the flood tunnels to handle the torrent of water.

“We had releases of 156,000 cubic feet per second (cfs),” he said. “It was the first time in the history of the dam that we fully opened all four flood tunnels.”

The 2011 releases – which amounted to one million gallons per second – more than doubled the old record of 67,000 cfs during 1997 flooding.

When it came to moving the flood water, the first preference was to run the flow through the Fort Randall power plant to gain hydropower, Curran said. The eight turbines produce a combined 320 megawatts of power.

Fort Randall produces enough power for a city of 250,000 people, according to U.S. Army Corps of Engineers estimates.

“We continued to run our hydropower (during the flood),” Curran said. “We put out about 40,000 cfs through the power plant. The powerhouse was generating full capacity for those three months.”

Besides hydropower, the alternatives were running the water through the flood tunnels, spillway or a combination of both.

Fort Randall, completed in 1956, stands slightly more than two miles wide, at 10,700 feet, and 165 feet tall with a 140-foot water fall. Lake Francis Case runs for 107 miles behind the dam and backs up to the Big Bend Dam.

Fort Randall forms part of the Missouri River system of dams, Curran said. As such, the six dams need to remain in coordination for moving the flood water.

“The dams work together as a whole. They balance what each reservoir can hold and the flow each one can put through the power plant,” he said.

“Each one is a little bit unique, but they operate as a system. When the upper reservoirs are near their capacity, the rest of the water has to be moved downstream through all the dams.”

LIFE CHANGES

The flood affected all facets of life up and down the river, Curran said.

The Corps provided technical assistance to the Yankton Sioux Tribe amidst its flooding concerns, he said. Charles Mix County and the tribe had sustained $1 million in damages during previous flash flooding, and tribal members were displaced from their homes.

Most tribal members lived in homes on bluffs or other sites protected from the Missouri River flooding in 2011, Curran said. However, the Corps did warn tribal members about the dangers of bank erosion caused by the flooding, he said.

Downstream, the flooding inundated farmland, primarily in Charles Mix and Bon Homme counties on the South Dakota side of the river. On the Nebraska side, the river flooded housing developments such as Lazy River Acres.

The Nebraska Department of Roads (NDOR) closed stretches of Highway 12 east and west of Niobrara, Nebraska, throughout the summer. As a result, traffic was diverted and commuters and first responders were forced to find alternative routes.

The flooding didn't shut down Niobrara State Park, Niobrara, Chief Standing Bear Memorial Bridge or the Ohiya Casino. However, a number of travelers avoided the area because they encountered accessibility problems or mistakenly thought those sites were closed.

As a result, the economy – tourism, retail businesses, restaurants and bars – took a major hit.

While traditional tourism may have suffered in some areas, Fort Randall Dam saw an influx of a different type of visitor, Curran said.

"We had people from all over the country who wanted to see what the water looked like (when it was) that high and when it was released," he said. "Our people (with the Corps) were visiting with people every day (about the flood). We had longer hours every day just because people were coming through, looking and asking questions. We also had questions about the reservoirs and parks."

In addition, the Corps worked with conservation agencies on issues dealing with wildlife, Curran said. The Corps also monitored the changing course of the Missouri River and the increased sedimentation caused by the flooding, he said.

Lake Francis Case and Lewis and Clark Lake remained open for recreation, Curran said. However, flooding affected area campgrounds, boat ramps and other sites.

"As a reservoir, we had record pool levels in 2011. We were pretty much a half-foot from being totally full," he said. "A lot of recreational facilities were flooded at that level, and a lot of the recreation areas were closed."

The Missouri River and Lake Francis Case saw a great deal of pent-up demand the following year, Curran said. The boating and fishing numbers soared after the flooding.

"It was really busy in 2012," he said. "Things really picked up and rebounded that year."

LESSONS LEARNED

In 2012, the Corps embarked on a number of projects as part of regular maintenance and from the flooding. The inspections looked at the gates, cables, spillway and embankment.

Curran, who has worked at Fort Randall since 1999, said he has always remained confident about the stability of the dam and reservoir. His confidence was reinforced during and after an unprecedented event such as the 2011 flooding, he said.

Fort Randall handled the stress despite months of intense flood pressure on the dam, he said.

“That was kind of the test. The dam held up great. We did really well with no operation problems,” he said. “Afterwards, we had a really thorough survey of everything, and it was just the normal wear-and-tear items. We worked after the flood to see if everything was in good shape and if we’re ready to go should this (flood) ever happen again.”

In that respect, the flood showed the dam’s capability, Curran said.

“It was interesting to see what would happen during a high-water event,” he said. “The flood pushed everything to its limits, but there really wasn’t anything that stuck out as a problem or issue.”

Col. John Henderson, the Omaha District commander for the Corps of Engineers, visited Fort Randall Dam earlier this year.

Henderson reflected on the fifth anniversary of the 2011 flood and emphasized the importance of two-way communication between the Corps and stakeholders, according to a Corps publication.

“I think the timing of this trip is appropriate since we are only five years removed from the single most significant hydrological event to occur in this basin in the last 100-plus years,” he said.

“One of the key lessons learned following that event was the need for an ongoing commitment to open and frank dialogue throughout the basin. This inspection trip is an example of our efforts to maintain that dialogue.”

Curran still sees and hears about the flood’s impact from those most affected by it.

“I think there are some people who were intimately involved with the high water and flooding who haven’t forgotten about it,” he said. “But there are other areas where things are improving. People are doing some of the things they had always planned to do, and it looks nice.”

Echoing Henderson’s sentiment, Curran said the flood showed the importance of communicating with all people up and down the river.

“As far as what was learned, I would say communication and getting the word out, again and again, to let people know what to expect,” he said.

“We’re working to provide people with a better understanding of how the dams and reservoir system work. We want them to have an understanding if anything like this (flooding) should ever happen again.”

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, “we are not seeing a big increase.”

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika’s potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the

road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client’s satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state’s request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform’s glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one’s home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

“If you don’t know about something, you better take preventative measures to minimize the risks,” Espinal said. “So maybe the fact that we don’t have a lot of microcephaly means that we were doing our jobs” and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador’s government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the cons

Hey there. Is the information below still current for inclusion in the leadership briefing memo? Would you like to update it? Please advise no later than **noon, Tue., Oct. 11**. Thanks!

REGION VIII

Colorado

- Mitigation recently determined that two Boulder County properties were ineligible for buy-out based upon FEMA's policy on the "*Limits on Subsurface Uses*" associated with hydraulic fracturing and horizontal directional drilling. The properties were deemed ineligible because under Colorado law they would remain subject to potential forced pooling and subsurface activity following acquisition. Throughout Colorado and many other states, mineral rights are often owned separately from surface rights. A further complication is that many states, including Colorado and all Region VIII states, have statutory or forced pooling laws, allowing subsurface activity without owner consent. The Region anticipates an appeal from Boulder County and continues to engage HQ FIMA on the implications of the policy, not only to Colorado and Region VIII, but other states as well.
- Landslides present acute and/or long-term threats to some 20 - 80 homes in Colorado Springs. There appeared to be money available from the Hazard Mitigation Grant Program for earlier disasters as well as perhaps other federal funds to cope with the short-term threat, though the process was seen as slow and the problem could worsen. FEMA's current policy on the "*Limits of Subsurface Uses*" and its application may also affect eligibility for these landslide acquisitions.

Oglala Sioux (DR – 4237)

This event was the first direct Individual Assistance (IA) declaration to an Indian Tribe. To address the severe housing challenges faced by the tribe, the Permanent Housing Construction Program was implemented for the first time within the Lower 48 United States. A total of 196 damaged residences were replaced with manufactured homes by September 1 and 107 homes were repaired by FEMA contractors by September 12, 2016.

Non-Stafford Act Issues

Several non-FEMA issues are of particular concern now to Region VIII state emergency managers.

- In North Dakota, protests by the Standing Rock Sioux and perhaps 90 other tribes against an oil pipeline currently under construction have gained national and international attention.
- In Montana, parasites have killed a large number of fish, prompting the shutdown of 180 miles of the Yellowstone River and causing economic distress to the tourism industry there.
- In Utah, two of this desert region’s water sources have come under threat, one from an extraordinary algae bloom and another from an accidental spread of toxic mine waste from a reservoir.

Work to resume on Dakota Access Pipeline near Lake Oahe

By Mike Nowatzki Today at 9:34 a.m.

BISMARCK – The company building the Dakota Access Pipeline said Tuesday, Oct. 11, it looks forward to a "prompt resumption" of construction near Lake Oahe and hopes the federal government will assist local law enforcement officials dealing with protests of the pipeline.

Dallas-based Energy Transfer Partners released a statement saying it is pleased with a federal appeals court decision Sunday denying the Standing Rock Sioux Tribe's request for an emergency injunction to stop construction of the $3.8 billion, 1,172-mile pipeline that will carry 470,000 barrels of crude oil per day from North Dakota to Illinois.

The three-judge panel in Washington, D.C., also lifted a temporary suspension of construction activities within 20 miles east and west of Lake Oahe, a dammed section of the Missouri River.

"In light of Sunday's court decision, Dakota Access looks forward to a prompt resumption of construction activities east and west of Lake Oahe on private land. We reiterate our commitment to protect cultural resources, the environment and public safety," the company said.

Company spokeswoman Vicki Granado declined to specify when the company will resume construction in the 20-mile area, which includes the area along Highway 1806 where protest activities to block pipeline construction began Aug. 10. An estimated 2,500 to 3,000 American Indians and other pipeline opponents are encamped along the highway and have drawn international support.

The proposed construction area also includes a stretch west of Highway 1806 that was bulldozed on Sept. 3, the day after the Standing Rock Sioux Tribe filed court documents identifying that part of the route as containing burial grounds and other sacred sites. Angry protesters clashed with the pipeline's private security that day, with both sides claiming injuries, and a joint law enforcement task force is investigating the incident.

Last week, state archeologists concluded that no sacred sites were destroyed, but the tribe disputes that conclusion because its historic preservation officer wasn't allowed to participate in the survey. The tribe's ongoing lawsuit against the U.S. Army Corps of Engineers contends the agency didn't properly consult the tribe before granting permits for the project.

Energy Transfer Partners said the decisions by two separate federal courts show otherwise.

"The Army Corps and Dakota Access carefully considered the views of all potentially affected tribes that chose to participate in the consultative process prescribed by Congress, and fully complied with both the letter and the spirit of the National Historic Preservation Act," the company said. "Their careful and sensitive work has been reviewed and approved by highly qualified private and state-employed archeologists."

The pipeline was 87 percent completed in North Dakota at the end of September and is largely completed in South Dakota, Iowa and Illinois.

"We continue to believe that the Army Corps will soon issue the easement for approximately 1,100 feet necessary for the crossing beneath the Missouri River – the sole remaining authorization necessary for completion of the project," the company said.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it won't authorize pipeline construction on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The three agencies asked that the company voluntarily pause construction within 20 miles of the lake.

The company on Tuesday urged that any protests "be undertaken in a peaceful and law abiding manner." Authorities arrested 27 protesters at two construction sites Monday, including actress Shailene Woodley, bringing the total number of arrests to 123.

"All construction efforts will be undertaken in close coordination with state and local law enforcement officials, and we are hopeful their law enforcement efforts will be supplemented by those of the federal government," the company said.

State officials and lawmakers have decried the lack of financial and law enforcement support from the federal government, given that the Corps is withholding the lake-crossing easement and allowing protesters to camp on Corps-owned land. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs, and Monday's response involved deputies from Wisconsin – the first time out-of-state officers have been used.

Actress Woodley released from jail after arrest at Dakota Access protests

By Mike Nowatzki on Oct 10, 2016 at 9:59 p.m.

ST. ANTHONY, N.D. – Authorities arrested Hollywood actress Shailene Woodley and 26 other protesters at two Dakota Access construction sites in Morton County on Monday, Oct. 10, as pipeline opponents vowed to keep disrupting the project after an appeals court ruling Sunday that allows work to resume on a 20-mile stretch west of Lake Oahe.

Despite the court's ruling, the U.S. Army Corps of Engineers said Monday it won't authorize construction of the $3.8 billion pipeline on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The Corps also repeated its request that Dakota Access LLC voluntarily pause all construction activity within 20 miles east or west of the lake. A company spokeswoman did not return a message seeking comment.

Monday marked the most arrests in one day since protests of the four-state, 1,172-mile pipeline began two months ago just north of the Standing Rock Sioux Reservation, where tribal members fear the pipeline will leak and contaminate their water supply and destroy sacred sites on ancestral lands.

Authorities were notified about 7:15 a.m. Monday that two protesters had attached themselves to construction equipment about 2 miles southwest of St. Anthony, Morton County Sheriff's Department spokesman Rob Keller said. Both were arrested for felony reckless endangerment, and a third person filming the event also was arrested, he said.

A few miles south along Highway 6, about 200 protesters converged on the west side of the road where the pipeline is strung but not yet buried, including Woodley, who live-streamed video of the protest on Facebook. The star of the "Divergent" film series was arrested at 12:05 p.m. on suspicion of criminal trespass and engaging in a riot, the same basis for most of the 27 arrests, said Cass County Sheriff Paul Laney, operations chief.

Woodley was released on $500 bond about 3:30 p.m. Her next court appearance will be Oct. 24.

Protesters erected an uncovered teepee in the pipeline corridor, and more than a dozen people who locked arms inside it were arrested. The 27 arrests brings the total to 123 so far. More than 100 law enforcement officers, many of them wearing riot gear, responded to the scene, directing protesters back across the fence line and forming a human barricade to keep them off the construction site. Protesters formed their own line less than 10 feet away, holding signs, pounding drums and yelling refrains such as "Respect our land, respect our water, honor our treaties." "They plan to continue building, and we plan to continue to disrupt," a protester declared through a bullhorn. No physical violence was reported. But Laney disputed claims that it was a peaceful protest, noting protesters used threatening speech, refused to leave when asked and, at one point, surrounded a deputy who was arresting a protester, forcing another deputy to break up the circle. "This was not a protest," he said. "This was a riot." Watch the video below to see Woodley's arrest. Fast-forward to the last five minutes of the video to see the arrest.

Robby Romero, an Apache from Taos, N.M., criticized what he described as the militarized police response, complete with an armored Mine-Resistant Ambush Protected vehicle parked at the top of the hill on Highway 6 overlooking the protest. “This is a crazy response to a peaceful resistance to something that is so dangerous to all life,” he said, adding, “We will win this fight, peacefully. We come with prayer and feathers. They come with weapons of destruction.” Both protests took place outside the 20-mile zones east and west of the Missouri River at Lake Oahe where a federal appeals court had ordered Dakota Access LLC to pause construction while the court decided on the Standing Rock Sioux Tribe’s request for an emergency injunction. The three-judge panel in Washington, D.C., issued a ruling Sunday rejecting the tribe’s request and dissolving the 20-mile, no-work zone.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it hopes to conclude its review soon. The agencies said they “continue to respect the right to peaceful protest and expect people to obey the law.” “We also look forward to a serious discussion during a series of consultations, starting with a listening session in Phoenix on Tuesday, on whether there should be nationwide reform on the Tribal consultation process for these types of infrastructure projects,” they said.

Officers from Wisconsin assisted in Monday’s response. Schools in nearby St. Anthony and Flasher went on lockdown. Laney said the 200 to 300 protesters who took part are a “distinct” group within the 2,500 to 3,000 mostly peaceful people camping along Highway 1806 about 25 miles away near the confluence of the Missouri and Cannonball rivers. He said protesters’ message has been heard “loud and clear” over the last 62 days, but added “the courts have ruled” and the company has a legal right to do construction. “If their determination is that they’re going to … do everything they can to stop this work, I guess we’re going to be here for a while,” he said.

Study: Human-caused warming burns more Western forests – Colorado Springs Gazette

By: KEITH RIDLER, Associated Press
Updated: October 11, 2016 at 4:47 pm

BOISE, Idaho (AP) — A new study of Western forest fires confirms what is already apparent — wildfire seasons are getting longer and more destructive.

But researchers with the University of Idaho and Columbia University also say humans are to blame.

The study made public Monday says human-caused global warming contributed an additional 16,000 square miles of burned forests from 1984 to 2015.

Researchers say the 16,000 square miles represent half of the forest areas that burned over the last three decades.

"We're no longer waiting for human-caused climate change to leave its fingerprint on wildfire across the western U.S.," John Abatzoglou, the study's lead author and an associate professor of geography at the University of Idaho, said in a statement. "It's already here."

The authors of the study, published online in the Proceedings of the National Academy of Sciences, say it's the first to try to quantify how much human-caused climate change has increased wildfires in Western forests. Some other factors that had to be considered as contributing to the increase, the report said, included a legacy of fire suppression in the West, natural climate variability, and human settlement.

The study found that longer and hotter dry spells are causing Western forests to dry out and become more susceptible to wildfires.

Specifically, researchers said, spring and summer temperatures have warmed by 2 to 2.5 degrees since 1950. Researchers said that warming accounts for 55 percent of what they call "fuel aridity" from 1979 to 2015. The study attributed the other 45 percent to natural climate variations.

The study found that since 2000 there's been a 75 percent increase in forested lands with elevated aridity and nine more days each year with dry forests especially susceptible to wildfires.

"Anthropogenic climate change has emerged as a driver of increased forest fire activity," the report says.

Park Williams of Columbia University's Lamont-Doherty Earth Observatory, and a co-author of the study, said the report provides a better understanding of the effects human-caused global warming has on Western forests.

"This knowledge will allow us to make more educated fire and land management decisions," he said.

One of those decision-makers is Idaho Forester David Groeschl, who said the report could offer some help in the future.

"We know that our fire season is getting longer," Groeschl said. "We know that we're seeing more and longer fires, and we know that we have increasing fuels out there as well."

The fuel aridity was particularly bad in Idaho in 2015 when an extended heat and drought left northern Idaho forests parched and in the worst condition since 1926, officials said.

That summer and fall, 600 square miles of U.S. Forest Service land burned. Idaho's bill for fighting wildfires soared to $60 million with some 100 square miles, about three quarters of it forests, burning on state, private and federal lands that are in forest protective districts designated as the state's responsibility.

Idaho has taken a number of steps aimed at the wildfire risk, including increasing the pay of in-demand, experienced firefighters who were leaving to take similar jobs with more money at other agencies. Idaho also recently formed a partnership with the U.S. Forest Service to take on landscape-scale projects by using the state's land management expertise that includes selling timber on federal land. The state's first auction of federal timber took place last month.

How successful the partnership will take years to determine.

The study released Monday concluded that the trend of increased forest aridity resulting in large wildfires is likely to continue for decades while there are enough trees to fuel the flames.

Protesters cause temporary shut-down of pipeline in northcentral Montana- KBZK TV Bozeman

Posted: Oct 12, 2016 8:28 AM MDT

GREAT FALLS -
The battle over the Dakota Access Pipeline in North Dakota came to Montana on Tuesday.

Protesters forced the temporary shutdown of five pipelines carrying oil from Canadian tar sands, including one at Coal Banks Landing south of Big Sandy in Chouteau County.

Spectra Energy confirmed to MTN News that trespassers tampered with a valve on its express pipeline on Tuesday, and that as a precaution it was shut off.

The environmental group Climate Direct Action said Tuesday that it had also successfully shut down express pipelines at locations in Washington, North Dakota, and Minnesota.

The group says it was attempting to shut the pipelines down over concerns about global warming, and in solidarity with members of the Standing Rock Sioux tribe's protest of the Dakota Access Pipeline.

Spectra Energy says it worked with law enforcement officers in its response to the tampering incident in Chouteau County, and that their primary concern was safety of the community and environment.

The website Unicorn Riot posted the following information on Tuesday:

> *Early this morning, five water protectors successfully shut down five pipelines across the northern United States that were delivering tar sands oil from Alberta, Canada. The action was in support of the call for International Days of Prayer and Action for Standing Rock.*
>
> *The individuals used manual safety valves and bolt cutters to access and shut down the flow of tar sands oil into the US. They are "calling on President Obama to use emergency powers to keep the pipelines closed and mobilize for the extraordinary shift away from fossil fuels now required to avert catastrophe."*
>
> *The actions were undertaken by Emily Johnson, 50, and Michael Foster, 52, of Seattle, WA, Annette Klapstein, 64, of Bainbridge Island, WA, Ken Ward, 59, of Corbett, OR, and Leonard Higgins, 64, of Eugene, OR.*

There is no word yet on whether any of the protesters might face charges.

Spectra released the following statement: "Spectra Energy has responded to a situation during which trespassers broke into a locked facility and tampered with a valve on its Express Pipeline Tuesday morning in Montana. We coordinated with law enforcement in this response. Our first concern is for the safety of the community and the environment, and tampering with this important U.S. energy infrastructure will not be tolerated. This pipeline provides a vital source of affordable, reliable energy to fuel the everyday lives of Americans. As a cautionary measure, we temporarily shut down this section of the Express Pipeline."

Butte firefighters teach students about fire safety- KTFM TV News Kalispell

Posted: Tuesday, October 11, 2016 8:46 PM

BUTTE -
Butte firefighters said fire education starts here, in the classroom. After the kids saw firefighters put on their gear and learn about stop drop and roll. Firemen Pat Doherty then spoke about the most common house fires

"Most structure fires in the United States are from cooking materials. It's always best to stay in the vicinity and keep an eye on it," said Pat Doherty, Butte Fire Department.

During the predicted cold snap, families will be turning up the heat. However, Doherty explains to kids to watch out for the dangers that can sometimes come from using space heaters.

Doherty also adds it's never smart to leave them unattended.

"Space heaters are dangerous. In the case of people forgetting to unplug them or they keep them too close to stuff that's going to catch on fire," said Doherty.

Airport Disaster Exercise Set for Thursday – DRGnews.com

October 12, 2016 (Dakota Radio Group)
By: Press Release

PIERRE, SD- You can expect lights, sirens and a whole lot of activity at the airport later this week.

Thursday evening, from 5:30 – 7:30, the Pierre Regional Airport and Hughes County will conduct a full scale disaster exercise. The mock disaster scenario includes a hazardous materials response on a simulated aircraft. The exercise is required by the Federal Aviation Administration and designed to provide first responders and airport personnel with disaster response experience.

“This is really practice for all the responders,” said Mike Isaacs, Pierre Regional Airport Manager. “We do everything we can to avoid aircraft accidents, but we want to be prepared in the event there’s one we can’t avoid.”

Isaacs went on to say that the exercise requires all the activity that a real disaster would require. Those involved in the exercise will be assigned a variety of responsibilities that include everything from information gathering and dissemination to coordination of involved entities to response management to logistics and cost tracking.

“An Emergency Operations Center and Unified Command Post will be set up at the airport for this exercise,” said Isaacs. “They will serve as the hubs of all disaster response and recovery efforts.

Approximately 50 people will be involved in the exercise including volunteers, city and county officials, and first responders.

The Federal Aviation Administration requires airports with commercial air service to conduct a full-scale disaster exercise every three years. Additionally, the South Dakota Office of Emergency Management requires counties to conduct a variety of exercises throughout the year. The Thursday night exercise fulfills requirements for both Hughes County and Pierre Regional Airport.

National Fire Prevention Week (Hot Springs Star)

By John D. Taylor

A closer look at Hot Springs Volunteer Fire Department history

HOT SPRINGS – The advent of National Fire Prevention Week, Oct. 9 -15 this year, is a good time to look at the important role firefighters play in the community, and to consider what everyone can do to prevent fires.

Fire Prevention Week

Since 1922, Fire Prevention Week has been observed to commemorate the Great Chicago Fire, that tragic 1871 conflagration that killed more than 250 people, left 100,000 homeless and destroyed more than 17,400 structures.

The fire began on October 8, but did most of its damage on October 9, 1871 – why Fire Prevention Week is held on Oct. 9 annually.

Popular legend holds that while Mrs. Catherine O'Leary was milking a cow, it kicked over a lamp, ignited her barn, then lit the whole city of Chicago on fire. However, recent research by Chicago historian Robert Cromie has debunked this fairy tale – while retaining some elements of truth in the story.

The fire did, indeed, originate near the barn where Mrs. O'Leary kept her five milk cows. But there is no proof that her cow sparked the blaze. O'Leary's testimony says she and her cows were asleep, not milking, when the fire broke out.

Who started it then? Some blame some neighborhood boys who were near the barn sneaking cigarettes, some say a O'Leary's neighbor started the fire, another theory is that a meteorite shower that fell during Oct. 8 all over Michigan and Wisconsin may have started the fire.

Also, while the Chicago Fire is one of the most well known, it wasn't the biggest fire in American history. That notoriety belongs to the Peshtigo Fire, which also occurred on October 8, 1871, in northeast Wisconsin. It burned 16 whole towns, killed more than 1,100 people, and scorched 1.2 million acres. It began when several railroad workers, clearing land for tracks, unintentionally lit a brush fire. Before long, the fast-moving flames were whipping through the area “like a tornado,” survivors said. Peshtigo, Wisconsin got the worst of it, within an hour, the entire town was destroyed.

These fires changed the way firefighters and public officials thought about fire safety. And on the 40th anniversary the fires the Fire Marshals Association of North America decided to mark the anniversary in a way to keep the public informed about the importance of fire prevention.

In 1920, President Woodrow Wilson issued the first National Fire Prevention Day proclamation, and since 1922, Fire Prevention Week has been observed. According to the National Archives and Records Administration’s Library Information Center, it is the longest running public health and safety observance on record.

Hot Springs VFD

On July 2, The Hot Springs Volunteer Fire Department (VFD) celebrated its 125th anniversary.

The fire company was formed, according to a VFD history by William T. Richer – VFD member Jenni Sotherland shared this with the Star – in January of 1890, when a group of Hot Springs citizens gathered at the Minnekahta Hotel to organize themselves into the VFD. At this meeting, John Gillespie was elected chief; H. C. Venette, first assistant chief; John Mueller, second assistant chief; Kenneth Harris, secretary and Wally Root, treasurer.

In those days, there was no citywide water system, so the only equipment the VFD needed was a large number of leather water buckets. To fight fires, the men formed two lines –Richer calls them “strings” – going to and from the fire and a water source. Usually, Fall River, water holes or cisterns were the water sources. One line of men passed buckets of water from the river to the fire, the other line returned the empty buckets.

In July, when the modern VFD was whooping it up with a masquerade ball at American Legion Post 71 they may not have been thinking about these roots, but they are where the VFD originated.

Early days

Later in 1890, the city began to pipe water into the business district, so it purchased its first fire-fighting equipment: two, high wheeled hose carts, and one hook and ladder wagon. The hose carts were drawn by men, the wagon pulled by a team of horses.

Throughout those early days the city’s firefighting ability grew. In 1893, the city bought another high-wheeled hose cart, placed iton College Hill (where the high school is today).

One interesting story from those days is connected to John Mueller, father of the Mueller Center founder. In 1896, when Mueller was the VFD’s first assistant fire chief, he bought a white horse, named “Old Granger” from Bill Perry.

Mueller used Old Granger to ride to and from fires, and pull the No. 1 hose cart to fire scenes.

For many years Mueller kept his stable much the same as the city's fire equipment stables, with the bridle bit in Old Granger's mouth, so the horse was ready to go. When an alarm sounded, Old Granger would leave his stall, make a run for the buggy shafts, where the No. 1 hose cart could be hooked up to him with one snap of the harness, and "away he would go," says Richer.

Sometimes, Mueller was able to catch a ride on the horse, other times, Old Granger was the first responder to a fire.

Richer says, "The call of the fire alarm was greater to this noble horse than was the call of the feed box." Mueller used Old Granger in this fashion for a quarter century, until 1915, when the horse was "pensioned." The horse was so stiff and lame then he could hardly walk the streets, according to Richer. "But if an alarm came in, one would think he was a mighty young horse. He was able to forget his stiffness and lameness to answer the call."

Richer says in 1916, when Old Granger was "pensioned" and put out to pasture near town, the horse heard an alarm call and in a few moments showed up in town to answer the call.

Granger answered his last fire call in 1917.

Also during these early days, the VFD sponsored three-day 4th of July celebrations, free to the public. Special trains brought large crowds of people into Hot Springs from surrounding areas and the entertainment included greased pig-catching and greased pole-climbing contests, rodeo-style bucking horses, baseball games, swimming contests, foot races, human wheelbarrow races, tug-of-wars, band concerts and reading the Declaration of Independence.

In 1899, the VFD fire hall became a dual-purpose building, hosting Hot Springs' first opera hall as well as the fire hall. What happened was that the fire department remodeled their building, adding a small stage to the east end of the room, a set of bleachers in the west, and covering the remaining floor space with folding chairs advertising Happy Bill cigars. Two small dressing rooms were also built outside the building. The Fireman's Opera House was in operation until about 1909, when the skating rink and theater opened. The opera house never made much money, but it gave city residents a place for entertainment.

Up until the end of World War I (1918), the fire fighting equipment of the city included three hose carts and one hook and ladder wagon or truck. The hose carts were housed in various parts of town: One in the lower end, one on College Hill, one on Minnekahta Ave. The hook and ladder wagon was kept at city hall. Fire alarms were anything that made noise -- train whistles, church bells and "men hollering at the top of their voices," notes Richer.

There were no telephones in those days, so when fires occurred at night, VFD members "would generally exhaust themselves in running from their homes to the scene of the fire."

Often, by the time the hose carts got to the scene, the fire was out of control, and the VFD's efforts focused on keeping the fire from spreading to adjoining properties. "It was quite generally considered those days that if a property caught fires during the night time, there would be nothing left in the morning, except the lot. One example of this is how an April 1891 fire wiped out a whole city block of business buildings in “lower” town, the damage estimated at $35,000 – big money in those days.

Other big blazes of that era the 1891 blaze that took the Minnekahta Hotel, the 1892 blaze that took out several buildings where the Post Office now stands, an 1895 fire that destroyed the Jay Crane store building, a 1903 fire that took a block of business houses what was People’s National Bank and the Riverside Apartments, a 1907 fire that took the Catholican Hotel and bath house and the Siloam bath house, 1910’s Gibson Hotel fire and 1915’s Gillespie Hotel fire. In 1924, the High School building burned to the ground.

Motorization

In 1918, a movement was started to motorize the VFD. City businessmen, citizens and the fire company made donations of $1,875 which bought a combination Ford chemical and hose truck. This was put into service in June of 1919, when Dave Batchelor was foreman of the fire company. Batchelor’s house burned down, a $3,000 loss, in 1908.

An REO Speedwagon Fire Truck equipped with a pump was purchased in 1924, after the high school fire, to increase water pressure, and town founding father F.O. Butler offered the fire company his Pierce-Arrow touring car, which was reworked into a hook and ladder truck. This unit remained in operation until 1938, when it was replaced by a new, Ford V-8 truck.

In 1934, the REO Speedwagon was converted into a smoke extractor, a move made possible by the ingenuity of Vic Englebert, H.C. “Swede” Nelms, and Fire Chief L. J. Bingham. These men added a 25-horsepower Waukesha motor to a large suction fan, salvaged from the State Soldier’s Home. This rig was given credit for saving more property than any other equipment in the department, drawing smoke and gas from burning buildings at a rate of 6,500 cubic feet per minute, which made it possible for firefighters to get into burning buildings and extinguish fires.

Growth

Throughout the 1930s the VFDs gear grew, as Hot Springs grew, with horses and carts being replaced by larger and more powerful motorized equipment. In 1936, this enabled Hot Springs to get a 10 percent cut in insurance rates because of the efficiency of the fire department.

By the 1940s, there were 561 people in the VFD, with 65 active members and six living in Fire Hall, on call to fight fires. Engines and other gear were purchased by the city or the VFD via proceeds for insurance money or annual dances. But in 1942, city agreed to begin paying the VFD $200 per month to, with the understanding that the VFD would pay for all equipment, pay their own insurance, water, lights, telephone, gas, oil, fire station upkeep and other incidental expenses.

“Without a doubt the Hot Springs Fire Department is one of the very best strictly volunteer fire departments in the state…the department has brought home the South Dakota State Championship trophy a total of 11 times.

During the late 1940s, the fire chief was conducting "fire drills at both schoolhouses several times each year. These drills are not at regular intervals, but just whenever he takes the notion, giving no notice to teachers, janitors or pupils at the building." A general inspection of "every business house within the city" was also held annually, which revealed any fire hazards.

In 1948, after Frank Fetzner, Deputy State Fire Marshall, saw the VFD in action for the first time, he said the VFD handled themselves like a experts and that the city should feel mighty proud that they have such a group of fire-fighters.

After flood of 1948, a VFD American LaFrance pumper was used to pump out Evans Plunge. This took days. Also, extension ladder truck saved a "kid" marooned on the cliffs at Hot Brook, with two fireman saving the goat.

Also, 800 questionnaires and inspection blanks were sent home with school kids, asking that they report any fire hazards in their homes. Returning this would get the kids a ride on the fire truck. More than 700 of these came back, the kids ratting out their parents bad habits, even in the homes of firemen.

Emergency ambulance was first put into service in November of 1949.

The 1950s

These were high times for the VFD – in more ways that one, according to new VFD scribe Howard McBride. In 1950, Chief Vic Englebert resigned, saying "he had gone on a bender, got himself in jail and fined. Was called on the carpet by his boss and was given an enforced vacation for two weeks from his job."

That same year the city floated a $15,000 bond issue for new fire station, and it carried 1,098 to 487 votes. The VFD bought three lots (where the Valley Hotel burned in 1946) for $3,500 in the city's name. Many private citizens gave donations to this, including one widow who gave $100, quite a bit of money then.

In February of 1950, at the annual Fireman's Masquerade Ball, someone set fire to Wally King's masquerade suit, which produced 2nd degree burns on his legs, hips, chest and chin, and 3rd degree burns on both hands. King was in hospital for several months, and the masquerade ball ended – until this year.

In 1951, street names in the city were changed, and a new map was prepared showing the new names and locations. Firemen instructed to study this and become familiar with it.

William Watson, of Wind Cave National Park, came to a VFD meeting in April to compliment the VFD on their cooperation. Watson said the park and the state Game, Fish & Parks department couldn't see eye-to-eye on their cooperative agreement, and he thought VFD should take care of Southern Hills fires. "If the rest of Hot Springs had the getup and go of the fire department, the town would be a hell of a lot better off," Watson quipped, noting he wouldn't be at Wind Cave much longer due to a transfer to Hot Springs, Arkansas.

In 1953 a fire at the Minnekahta Building, took the lives of a woman and her two daughters, although the father and his two sons escaped harm. The building was falling into itself when VFD arrived.

The last years of the 1950s brought a new aerial ladder, an Oelrichs chicken hatchery fire that cooked 3,700 of the birds, and a January fire in 20-below temperatures that the fire chief said was the first time he'd see the smoke extractor tube freeze.

1960s and 70s

After the 1961 flood, the VFD was called on to pump basements, but lacked the equipment to do so. It was also called to Angostura Dam for rescue work. In 1963 a new addition was put on the station. School building inspections revealed a few hazards, which were eliminated.

And the 1979's Evans Hotel Fire proved to be a seminal event for the city.

Modern VFD

Most recently, the VFD has had some major fires to contend with.

It fought 2007's Alabaugh Fire, which burned 10,324 acres, destroyed 33 homes, killed one resident, and forced two firefighters to take refuge in a fire shelter. Hot Springs' Mary Goulet lived in one of those homes and wrote a book about the fire, "Cascade of Flames."

In 2015, the Bitter Creek fire started south of Hot Springs, off Highway 71 at the intersection of Maitland and Ash Creek Roads. It burned about 87 acres, and firefighters from Cascade, Hot Springs, and South Dakota State stopped the spread.

And just after their 125th anniversary, in mid-July of this year, the Indian Canyon fire, which began after four days of temperatures topping 90 degrees and a lightning strike touched off a blaze about five miles southeast of Edgemont, scorching 14,133 acres

Today, the VFD has 65 active volunteers led by Chief Jim Stevens, 1st assistant Chief Bob Evans, 2nd assistant chief Wendell Hertel, and Secretary Treasurer Gerald Hanson.

Argyle VFD looking for help

The Argyle Volunteer Fire Department (AVFD) located between Pringle and Hot Springs, SD is seeking new members. Applicants should be over 18 years of age, in good physical health, have a clean driving record, and be able to pass a Law Enforcement Background check. Firefighters will respond to structural and wildland fires as well as assist with search and rescue operations, motor vehicle accidents and other emergencies in our coverage area. First Responders will assist and respond to medical emergencies and assist patients until ambulances arrive on scene. Prior experience is not necessary but certainly welcome. This is a volunteer non-paid position.

The Department provides Fire and EMS response to a 144 square mile area of southwestern Custer County and provides Mutual Aid to Pringle, Minakata, Custer, Hot Springs, Wind Cave, Custer State Park, and other nearby agencies in Custer and Fall River Counties.

Meeting are held at the fire station on the first and fourth Thursdays of each month at 7 p.m.

For more information, call (605) 673-5823; e-mail ArgyleVFD.SD@gmail.com, or check the Argyle Volunteer Fire Department Facebook page.

WYOMING:

USDA designates Park County in Wyoming as a primary natural disaster area (Northern Wyoming Daily)

CASPER — The U.S. Department of Agriculture (USDA) has designated Park County in Wyoming as a primary natural disaster area due to a recent drought.

“Our hearts go out to those Wyoming farmers and ranchers affected by recent natural disasters,” said Agriculture Secretary Tom Vilsack. “President Obama and I are committed to ensuring that agriculture remains a bright spot in our nation’s economy by sustaining the successes of America’s farmers, ranchers, and rural communities through these difficult times. We’re also telling Wyoming producers that USDA stands with you and your communities when severe weather and natural disasters threaten to disrupt your livelihood.”

Farmers and ranchers in Big Horn, Fremont, Hot Springs, Teton and Washakie counties in Wyoming also qualify for natural disaster assistance because their counties are contiguous.

Farmers and ranchers in Carbon, Gallatin and Park counties in Montana also qualify for natural disaster assistance because their counties are contiguous.

All counties listed above were designated natural disaster areas on Oct. 5, 2016, making all qualified farm operators in the designated areas eligible for low interest emergency (EM) loans from USDA’s Farm Service Agency (FSA), provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses. FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the EM loan program, to help eligible farmers recover from adversity.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program; Livestock Forage Disaster Program;Livestock Indemnity Program; Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program; and the Tree Assistance Program. Interested farmers may contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online athttp://disaster.fsa.usda.gov.

Study: Human-caused warming burns more Western forests – Colorado Springs Gazette

By: KEITH RIDLER, Associated Press

Updated: October 11, 2016 at 4:47 pm

BOISE, Idaho (AP) — A new study of Western forest fires confirms what is already apparent — wildfire seasons are getting longer and more destructive.

But researchers with the University of Idaho and Columbia University also say humans are to blame.

The study made public Monday says human-caused global warming contributed an additional 16,000 square miles of burned forests from 1984 to 2015.

Researchers say the 16,000 square miles represent half of the forest areas that burned over the last three decades.

"We're no longer waiting for human-caused climate change to leave its fingerprint on wildfire across the western U.S.," John Abatzoglou, the study's lead author and an associate professor of geography at the University of Idaho, said in a statement. "It's already here."

The authors of the study, published online in the Proceedings of the National Academy of Sciences, say it's the first to try to quantify how much human-caused climate change has increased wildfires in Western forests. Some other factors that had to be considered as contributing to the increase, the report said, included a legacy of fire suppression in the West, natural climate variability, and human settlement.

The study found that longer and hotter dry spells are causing Western forests to dry out and become more susceptible to wildfires.

Specifically, researchers said, spring and summer temperatures have warmed by 2 to 2.5 degrees since 1950. Researchers said that warming accounts for 55 percent of what they call "fuel aridity" from 1979 to 2015. The study attributed the other 45 percent to natural climate variations.

The study found that since 2000 there's been a 75 percent increase in forested lands with elevated aridity and nine more days each year with dry forests especially susceptible to wildfires.

"Anthropogenic climate change has emerged as a driver of increased forest fire activity," the report says.

Park Williams of Columbia University's Lamont-Doherty Earth Observatory, and a co-author of the study, said the report provides a better understanding of the effects human-caused global warming has on Western forests.

"This knowledge will allow us to make more educated fire and land management decisions," he said.

One of those decision-makers is Idaho Forester David Groeschl, who said the report could offer some help in the future.

"We know that our fire season is getting longer," Groeschl said. "We know that we're seeing more and longer fires, and we know that we have increasing fuels out there as well."

The fuel aridity was particularly bad in Idaho in 2015 when an extended heat and drought left northern Idaho forests parched and in the worst condition since 1926, officials said.

That summer and fall, 600 square miles of U.S. Forest Service land burned. Idaho's bill for fighting wildfires soared to $60 million with some 100 square miles, about three quarters of it forests, burning on state, private and federal lands that are in forest protective districts designated as the state's responsibility.

Idaho has taken a number of steps aimed at the wildfire risk, including increasing the pay of in-demand, experienced firefighters who were leaving to take similar jobs with more money at other agencies. Idaho also recently formed a partnership with the U.S. Forest Service to take on landscape-scale projects by using the state's land management expertise that includes selling timber on federal land. The state's first auction of federal timber took place last month.

How successful the partnership will take years to determine.

The study released Monday concluded that the trend of increased forest aridity resulting in large wildfires is likely to continue for decades while there are enough trees to fuel the flames.

MONTANA:

Protesters cause temporary shut-down of pipeline in northcentral Montana- KBZK TV Bozeman

Posted: Oct 12, 2016 8:28 AM MDT

GREAT FALLS -

The battle over the Dakota Access Pipeline in North Dakota came to Montana on Tuesday.

Protesters forced the temporary shutdown of five pipelines carrying oil from Canadian tar sands, including one at Coal Banks Landing south of Big Sandy in Chouteau County.

Spectra Energy confirmed to MTN News that trespassers tampered with a valve on its express pipeline on Tuesday, and that as a precaution it was shut off.

The environmental group Climate Direct Action said Tuesday that it had also successfully shut down express pipelines at locations in Washington, North Dakota, and Minnesota.

The group says it was attempting to shut the pipelines down over concerns about global warming, and in solidarity with members of the Standing Rock Sioux tribe's protest of the Dakota Access Pipeline.

Spectra Energy says it worked with law enforcement officers in its response to the tampering incident in Chouteau County, and that their primary concern was safety of the community and environment.

The website Unicorn Riot posted the following information on Tuesday:

> *Early this morning, five water protectors successfully shut down five pipelines across the northern United States that were delivering tar sands oil from Alberta, Canada. The action was in support of the call for International Days of Prayer and Action for Standing Rock.*
>
> *The individuals used manual safety valves and bolt cutters to access and shut down the flow of tar sands oil into the US. They are "calling on President Obama to use emergency powers to keep the pipelines closed and mobilize for the extraordinary shift away from fossil fuels now required to avert catastrophe."*
>
> *The actions were undertaken by Emily Johnson, 50, and Michael Foster, 52, of Seattle, WA, Annette Klapstein, 64, of Bainbridge Island, WA, Ken Ward, 59, of Corbett, OR, and Leonard Higgins, 64, of Eugene, OR.*

There is no word yet on whether any of the protesters might face charges.

Spectra released the following statement: "Spectra Energy has responded to a situation during which trespassers broke into a locked facility and tampered with a valve on its Express Pipeline Tuesday morning in Montana. We coordinated with law enforcement in this response. Our first concern is for the safety of the community and the environment, and tampering with this important U.S. energy infrastructure will not be tolerated. This pipeline provides a vital source of affordable, reliable energy to fuel the everyday lives of Americans. As a cautionary measure, we temporarily shut down this section of the Express Pipeline."

Butte firefighters teach students about fire safety- KTFM TV News Kalispell

Posted: Tuesday, October 11, 2016 8:46 PM

BUTTE -

Butte firefighters said fire education starts here, in the classroom. After the kids saw firefighters put on their gear and learn about stop drop and roll. Firemen Pat Doherty then spoke about the most common house fires

"Most structure fires in the United States are from cooking materials. It's always best to stay in the vicinity and keep an eye on it," said Pat Doherty, Butte Fire Department.

During the predicted cold snap, families will be turning up the heat. However, Doherty explains to kids to watch out for the dangers that can sometimes come from using space heaters.

Doherty also adds it's never smart to leave them unattended.

"Space heaters are dangerous. In the case of people forgetting to unplug them or they keep them too close to stuff that's going to catch on fire," said Doherty.

Airport Disaster Exercise Set for Thursday – DRGnews.com
October 12, 2016 (Dakota Radio Group)
By: Press Release

PIERRE, SD- You can expect lights, sirens and a whole lot of activity at the airport later this week.

Thursday evening, from 5:30 – 7:30, the Pierre Regional Airport and Hughes County will conduct a full scale disaster exercise. The mock disaster scenario includes a hazardous materials response on a simulated aircraft. The exercise is required by the Federal Aviation Administration and designed to provide first responders and airport personnel with disaster response experience.

“This is really practice for all the responders,” said Mike Isaacs, Pierre Regional Airport Manager. “We do everything we can to avoid aircraft accidents, but we want to be prepared in the event there’s one we can’t avoid.”

Isaacs went on to say that the exercise requires all the activity that a real disaster would require. Those involved in the exercise will be assigned a variety of responsibilities that include everything from information gathering and dissemination to coordination of involved entities to response management to logistics and cost tracking.

“An Emergency Operations Center and Unified Command Post will be set up at the airport for this exercise,” said Isaacs. “They will serve as the hubs of all disaster response and recovery efforts.

Approximately 50 people will be involved in the exercise including volunteers, city and county officials, and first responders.

The Federal Aviation Administration requires airports with commercial air service to conduct a full-scale disaster exercise every three years. Additionally, the South Dakota Office of Emergency Management requires counties to conduct a variety of exercises throughout the year.

The Thursday night exercise fulfills requirements for both Hughes County and Pierre Regional Airport.

National Fire Prevention Week (Hot Springs Star)

By John D. Taylor

A closer look at Hot Springs Volunteer Fire Department history

HOT SPRINGS – The advent of National Fire Prevention Week, Oct. 9 -15 this year, is a good time to look at the important role firefighters play in the community, and to consider what everyone can do to prevent fires.

Fire Prevention Week

Since 1922, Fire Prevention Week has been observed to commemorate the Great Chicago Fire, that tragic 1871 conflagration that killed more than 250 people, left 100,000 homeless and destroyed more than 17,400 structures.

The fire began on October 8, but did most of its damage on October 9, 1871 – why Fire Prevention Week is held on Oct. 9 annually.

Popular legend holds that while Mrs. Catherine O’Leary was milking a cow, it kicked over a lamp, ignited her barn, then lit the whole city of Chicago on fire. However, recent research by Chicago historian Robert Cromie has debunked this fairy tale – while retaining some elements of truth in the story.

The fire did, indeed, originate near the barn where Mrs. O’Leary kept her five milk cows. But there is no proof that her cow sparked the blaze. O’Leary’s testimony says she and her cows were asleep, not milking, when the fire broke out.

Who started it then? Some blame some neighborhood boys who were near the barn sneaking cigarettes, some say a O’Leary’s neighbor started the fire, another theory is that a meteorite shower that fell during Oct. 8 all over Michigan and Wisconsin may have started the fire.

Also, while the Chicago Fire is one of the most well known, it wasn’t the biggest fire in American history. That notoriety belongs to the Peshtigo Fire, which also occurred on October 8, 1871, in northeast Wisconsin. It burned 16 whole towns, killed more than 1,100 people, and scorched 1.2 million acres. It began when several railroad workers, clearing land for tracks, unintentionally lit a brush fire. Before long, the fast-moving flames were whipping through the area “like a tornado,” survivors said. Peshtigo, Wisconsin got the worst of it, within an hour, the entire town was destroyed.

These fires changed the way firefighters and public officials thought about fire safety. And on the 40th anniversary the fires the Fire Marshals Association of North America decided to mark the anniversary in a way to keep the public informed about the importance of fire prevention.

In 1920, President Woodrow Wilson issued the first National Fire Prevention Day proclamation, and since 1922, Fire Prevention Week has been observed. According to the National Archives and Records Administration's Library Information Center, it is the longest running public health and safety observance on record.

Hot Springs VFD

On July 2, The Hot Springs Volunteer Fire Department (VFD) celebrated its 125th anniversary.

The fire company was formed, according to a VFD history by William T. Richer – VFD member Jenni Sotherland shared this with the Star – in January of 1890, when a group of Hot Springs citizens gathered at the Minnekahta Hotel to organize themselves into the VFD. At this meeting, John Gillespie was elected chief; H. C. Venette, first assistant chief; John Mueller, second assistant chief; Kenneth Harris, secretary and Wally Root, treasurer.

In those days, there was no citywide water system, so the only equipment the VFD needed was a large number of leather water buckets. To fight fires, the men formed two lines –Richer calls them "strings" – going to and from the fire and a water source. Usually, Fall River, water holes or cisterns were the water sources. One line of men passed buckets of water from the river to the fire, the other line returned the empty buckets.

In July, when the modern VFD was whooping it up with a masquerade ball at American Legion Post 71 they may not have been thinking about these roots, but they are where the VFD originated.

Early days

Later in 1890, the city began to pipe water into the business district, so it purchased its first fire-fighting equipment: two, high wheeled hose carts, and one hook and ladder wagon. The hose carts were drawn by men, the wagon pulled by a team of horses.

Throughout those early days the city's firefighting ability grew. In 1893, the city bought another high-wheeled hose cart, placed iton College Hill (where the high school is today).

One interesting story from those days is connected to John Mueller, father of the Mueller Center founder. In 1896, when Mueller was the VFD's first assistant fire chief, he bought a white horse, named "Old Granger" from Bill Perry.

Mueller used Old Granger to ride to and from fires, and pull the No. 1 hose cart to fire scenes.

For many years Mueller kept his stable much the same as the city's fire equipment stables, with the bridle bit in Old Granger's mouth, so the horse was ready to go. When an alarm sounded, Old Granger would leave his stall, make a run for the buggy shafts, where the No. 1 hose cart could be hooked up to him with one snap of the harness, and "away he would go," says Richer.

Sometimes, Mueller was able to catch a ride on the horse, other times, Old Granger was the first responder to a fire.

Richer says, “The call of the fire alarm was greater to this noble horse than was the call of the feed box.” Mueller used Old Granger in this fashion for a quarter century, until 1915, when the horse was “pensioned.” The horse was so stiff and lame then he could hardly walk the streets, according to Richer. “But if an alarm came in, one would think he was a mighty young horse. He was able to forget his stiffness and lameness to answer the call.”

Richer says in 1916, when Old Granger was “pensioned” and put out to pasture near town, the horse heard an alarm call and in a few moments showed up in town to answer the call.

Granger answered his last fire call in 1917.

Also during these early days, the VFD sponsored three-day 4th of July celebrations, free to the public. Special trains brought large crowds of people into Hot Springs from surrounding areas and the entertainment included greased pig-catching and greased pole-climbing contests, rodeo-style bucking horses, baseball games, swimming contests, foot races, human wheelbarrow races, tug-of-wars, band concerts and reading the Declaration of Independence.

In 1899, the VFD fire hall became a dual-purpose building, hosting Hot Springs’ first opera hall as well as the fire hall. What happened was that the fire department remodeled their building, adding a small stage to the east end of the room, a set of bleachers in the west, and covering the remaining floor space with folding chairs advertising Happy Bill cigars. Two small dressing rooms were also built outside the building. The Fireman’s Opera House was in operation until about 1909, when the skating rink and theater opened. The opera house never made much money, but it gave city residents a place for entertainment.

Up until the end of World War I (1918), the fire fighting equipment of the city included three hose carts and one hook and ladder wagon or truck. The hose carts were housed in various parts of town: One in the lower end, one on College Hill, one on Minnekahta Ave. The hook and ladder wagon was kept at city hall. Fire alarms were anything that made noise -- train whistles, church bells and “men hollering at the top of their voices,” notes Richer.

There were no telephones in those days, so when fires occurred at night, VFD members “would generally exhaust themselves in running from their homes to the scene of the fire.”

Often, by the time the hose carts got to the scene, the fire was out of control, and the VFD’s efforts focused on keeping the fire from spreading to adjoining properties. “It was quite generally considered those days that if a property caught fires during the night time, there would be nothing left in the morning, except the lot. One example of this is how an April 1891 fire wiped out a whole city block of business buildings in “lower” town, the damage estimated at $35,000 – big money in those days.

Other big blazes of that era the 1891 blaze that took the Minnekahta Hotel, the 1892 blaze that took out several buildings where the Post Office now stands, an 1895 fire that destroyed the Jay

Crane store building, a 1903 fire that took a block of business houses what was People's National Bank and the Riverside Apartments, a 1907 fire that took the Catholican Hotel and bath house and the Siloam bath house, 1910's Gibson Hotel fire and 1915's Gillespie Hotel fire. In 1924, the High School building burned to the ground.

Motorization

In 1918, a movement was started to motorize the VFD. City businessmen, citizens and the fire company made donations of $1,875 which bought a combination Ford chemical and hose truck. This was put into service in June of 1919, when Dave Batchelor was foreman of the fire company. Batchelor's house burned down, a $3,000 loss, in 1908.

An REO Speedwagon Fire Truck equipped with a pump was purchased in 1924, after the high school fire, to increase water pressure, and town founding father F.O. Butler offered the fire company his Pierce-Arrow touring car, which was reworked into a hook and ladder truck. This unit remained in operation until 1938, when it was replaced by a new, Ford V-8 truck.

In 1934, the REO Speedwagon was converted into a smoke extractor, a move made possible by the ingenuity of Vic Englebert, H.C. "Swede" Nelms, and Fire Chief L. J. Bingham. These men added a 25-horsepower Waukesha motor to a large suction fan, salvaged from the State Soldier's Home. This rig was given credit for saving more property than any other equipment in the department, drawing smoke and gas from burning buildings at a rate of 6,500 cubic feet per minute, which made it possible for firefighters to get into burning buildings and extinguish fires.

Growth

Throughout the 1930s the VFDs gear grew, as Hot Springs grew, with horses and carts being replaced by larger and more powerful motorized equipment. In 1936, this enabled Hot Springs to get a 10 percent cut in insurance rates because of the efficiency of the fire department.

By the 1940s, there were 561 people in the VFD, with 65 active members and six living in Fire Hall, on call to fight fires. Engines and other gear were purchased by the city or the VFD via proceeds for insurance money or annual dances. But in 1942, city agreed to begin paying the VFD $200 per month to, with the understanding that the VFD would pay for all equipment, pay their own insurance, water, lights, telephone, gas, oil, fire station upkeep and other incidental expenses.

"Without a doubt the Hot Springs Fire Department is one of the very best strictly volunteer fire departments in the state…the department has brought home the South Dakota State Championship trophy a total of 11 times.

During the late 1940s, the fire chief was conducting "fire drills at both schoolhouses several times each year. These drills are not at regular intervals, but just whenever he takes the notion, giving no notice to teachers, janitors or pupils at the building." A general inspection of "every business house within the city" was also held annually, which revealed any fire hazards.

In 1948, after Frank Fetzner, Deputy State Fire Marshall, saw the VFD in action for the first time, he said the VFD handled themselves like a experts and that the city should feel mighty proud that they have such a group of fire-fighters.

After flood of 1948, a VFD American LaFrance pumper was used to pump out Evans Plunge. This took days. Also, extension ladder truck saved a "kid" marooned on the cliffs at Hot Brook, with two fireman saving the goat.

Also, 800 questionnaires and inspection blanks were sent home with school kids, asking that they report any fire hazards in their homes. Returning this would get the kids a ride on the fire truck. More than 700 of these came back, the kids ratting out their parents bad habits, even in the homes of firemen.

Emergency ambulance was first put into service in November of 1949.

The 1950s

These were high times for the VFD – in more ways that one, according to new VFD scribe Howard McBride. In 1950, Chief Vic Englebert resigned, saying "he had gone on a bender, got himself in jail and fined. Was called on the carpet by his boss and was given an enforced vacation for two weeks from his job."

That same year the city floated a $15,000 bond issue for new fire station, and it carried 1,098 to 487 votes. The VFD bought three lots (where the Valley Hotel burned in 1946) for $3,500 in the city's name. Many private citizens gave donations to this, including one widow who gave $100, quite a bit of money then.

In February of 1950, at the annual Fireman's Masquerade Ball, someone set fire to Wally King's masquerade suit, which produced 2nd degree burns on his legs, hips, chest and chin, and 3rd degree burns on both hands. King was in hospital for several months, and the masquerade ball ended – until this year.

In 1951, street names in the city were changed, and a new map was prepared showing the new names and locations. Firemen instructed to study this and become familiar with it.

William Watson, of Wind Cave National Park, came to a VFD meeting in April to compliment the VFD on their cooperation. Watson said the park and the state Game, Fish & Parks department couldn't see eye-to-eye on their cooperative agreement, and he thought VFD should take care of Southern Hills fires. "If the rest of Hot Springs had the getup and go of the fire department, the town would be a hell of a lot better off," Watson quipped, noting he wouldn't be at Wind Cave much longer due to a transfer to Hot Springs, Arkansas.

In 1953 a fire at the Minnekahta Building, took the lives of a woman and her two daughters, although the father and his two sons escaped harm. The building was falling into itself when VFD arrived.

The last years of the 1950s brought a new aerial ladder, an Oelrichs chicken hatchery fire that cooked 3,700 of the birds, and a January fire in 20-below temperatures that the fire chief said was the first time he'd see the smoke extractor tube freeze.

1960s and 70s

After the 1961 flood, the VFD was called on to pump basements, but lacked the equipment to do so. It was also called to Angostura Dam for rescue work. In 1963 a new addition was put on the station. School building inspections revealed a few hazards, which were eliminated.

And the 1979's Evans Hotel Fire proved to be a seminal event for the city.

Modern VFD

Most recently, the VFD has had some major fires to contend with.

It fought 2007's Alabaugh Fire, which burned 10,324 acres, destroyed 33 homes, killed one resident, and forced two firefighters to take refuge in a fire shelter. Hot Springs' Mary Goulet lived in one of those homes and wrote a book about the fire, "Cascade of Flames."

In 2015, the Bitter Creek fire started south of Hot Springs, off Highway 71 at the intersection of Maitland and Ash Creek Roads. It burned about 87 acres, and firefighters from Cascade, Hot Springs, and South Dakota State stopped the spread.

And just after their 125th anniversary, in mid-July of this year, the Indian Canyon fire, which began after four days of temperatures topping 90 degrees and a lightning strike touched off a blaze about five miles southeast of Edgemont, scorching 14,133 acres

Today, the VFD has 65 active volunteers led by Chief Jim Stevens, 1st assistant Chief Bob Evans, 2nd assistant chief Wendell Hertel, and Secretary Treasurer Gerald Hanson.

Argyle VFD looking for help

The Argyle Volunteer Fire Department (AVFD) located between Pringle and Hot Springs, SD is seeking new members. Applicants should be over 18 years of age, in good physical health, have a clean driving record, and be able to pass a Law Enforcement Background check. Firefighters will respond to structural and wildland fires as well as assist with search and rescue operations, motor vehicle accidents and other emergencies in our coverage area. First Responders will assist and respond to medical emergencies and assist patients until ambulances arrive on scene. Prior experience is not necessary but certainly welcome. This is a volunteer non-paid position.

The Department provides Fire and EMS response to a 144 square mile area of southwestern Custer County and provides Mutual Aid to Pringle, Minakata, Custer, Hot Springs, Wind Cave, Custer State Park, and other nearby agencies in Custer and Fall River Counties.

Meeting are held at the fire station on the first and fourth Thursdays of each month at 7 p.m.

For more information, call (605) 673-5823; e-mail ArgyleVFD.SD@gmail.com, or check the Argyle Volunteer Fire Department Facebook page.

WYOMING:
USDA designates Park County in Wyoming as a primary natural disaster area (Northern Wyoming Daily)

CASPER — The U.S. Department of Agriculture (USDA) has designated Park County in Wyoming as a primary natural disaster area due to a recent drought.

“Our hearts go out to those Wyoming farmers and ranchers affected by recent natural disasters,” said Agriculture Secretary Tom Vilsack. “President Obama and I are committed to ensuring that agriculture remains a bright spot in our nation’s economy by sustaining the successes of America’s farmers, ranchers, and rural communities through these difficult times. We’re also telling Wyoming producers that USDA stands with you and your communities when severe weather and natural disasters threaten to disrupt your livelihood.”

Farmers and ranchers in Big Horn, Fremont, Hot Springs, Teton and Washakie counties in Wyoming also qualify for natural disaster assistance because their counties are contiguous.

Farmers and ranchers in Carbon, Gallatin and Park counties in Montana also qualify for natural disaster assistance because their counties are contiguous.

All counties listed above were designated natural disaster areas on Oct. 5, 2016, making all qualified farm operators in the designated areas eligible for low interest emergency (EM) loans from USDA’s Farm Service Agency (FSA), provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses. FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the EM loan program, to help eligible farmers recover from adversity.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program; Livestock Forage Disaster Program;Livestock Indemnity Program; Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program; and the Tree Assistance Program. Interested farmers may contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online athttp://disaster.fsa.usda.gov.

STORIES

COLORADO:

Don’t go chasing wildfires – unless you’re Scott Kelleher

13Oct, 2016 by Anne Ju Manning – Source/Colorado State University

Most people drive *away* from fires burning in the mountains. Scott Kelleher drives straight at them – well, near them, anyway. And it’s not for thrill seeking.

For two weeks in September, Kelleher drove the perimeter of a 6,000-acre prescribed burn in southern Colorado to set up 13 outdoor air samplers on steel stakes.

Kelleher’s system is suited for monitoring smoke emissions for both controlled burns and wildfires. Field-testing the sensors during an actual, unplanned wildfire would prove challenging. So, Kelleher received permission from the U.S. Forest Service to tag along on a planned, prescribed burn, which are common in the Rocky Mountains and other densely forested areas.

“The long-term goals of this project are very motivating,” Kelleher said. “It’s applying science and technology in an affordable new way to make the lives of those responsible for monitoring smoke much easier, with the main thought of protecting public health in mind.”

Field testing

Kelleher’s first field-testing campaign took place in a swath of land between Pagosa Springs and Bayfield, Colorado, near Pargin Mountain. Working closely with his contacts at the forest service, Kelleher set up each of his monitoring checkpoints in strategic proximity to the forest service’s monitoring zones.

The sensors Kelleher is testing are based off the principle of an Ultrasonic Personal Aerosol Sampler (UPAS) designed in the lab of his advisor, John Volckens, who is a professor in mechanical engineering and member of the CSU Partnership for Air Quality, Climate, and Health. The UPAS features an ultrasonic pump that draws in air, a sampling filter, rechargeable batteries, and an air flow rate sensor.

Kelleher’s master’s project involves adapting the UPAS for conditions suitable for prolonged outdoor monitoring. His new version, for which he is quick to point out he received many hours of help from other Volckens lab members, includes a hardened enclosure for weatherproofing; a solar cell for charging an extended-life battery; and a real-time, optical particle sensor that tracks the flow of particles 2.5 microns in diameter and smaller. “PM 2.5” is a standard measure for describing air pollution particles small enough to penetrate human lungs and cause health problems. The optical sampler contained in the device gives live updates.

The sensor also has a gravimetric analysis device that collects particles onto a filter. The filter is later weighed and analyzed for particulate matter concentrations. The entire device can be controlled remotely by smart phone.

The total cost of one of Kelleher's sensors is estimated at about $500, compared with particulate matter monitors used today that cost $10,000 to $20,000. The standard sensors usually require line power, and are large – about the size of a microwave oven.

Kelleher's unusual road trip involved seven rounds of 24-hour sampling. This involved traveling a route of 90 miles, changing out filters on each device and extracting information. In all, he was out in the fire for 14 days.

Automation in rural environments

A graduate of Montana Tech who grew up on a beef cattle, wheat and barley farm near the Canadian border, Kelleher is motivated by his work to bring the power of automation and monitoring to rural environments. Recognizing his penchant for engineering cost-effective solutions, and armed with his CSU master's degree in a couple of years, Kelleher hopes he can make a difference by bringing simple automation technologies to farmers or small businesses. The remainder of Kelleher's thesis will involve organizing and analyzing the data he collected at Pargin Moutain as well as follow-up prescribed burn experiments as needed. He will present his recent findings at the Second International Smoke Symposium (ISS2) in Long Beach, California next month.

"It was very cool to observe such a large-scale event and learn about the processes and effort that go into it," he said. "Hopefully, one day, my technology will enable anyone worried about air pollution to conduct monitoring right in their backyard."

NORTH DAKOTA:

Fox Island residents approve flood protection plan (Bismarck Tribune)

LEANN ECKROTH Bismarck Tribune 18 hrs ago

A $3.92 million Fox Island flood protection project has been approved 72-18 by property owners, who will pay part of its cost via a special assessment district, the Burleigh County Water Resource District Board announced Wednesday.

The project will involve raising a section of road and adding a levee to safeguard against a 20-foot flood. The Legislature has committed $2.8 million toward its completion, and the Burleigh

County Commission has approved funding of $920,000 in yearly installments. Fox Island property owners will pay the balance.

The project was driven by the 2011 Missouri River flooding.

The raising of the road would start at the pump at Tavis Road and move west along Farwest Drive and Gallatin Loop, according to Michael Gunsch of Houston Engineering, consulting engineer for the water resource district. The levee would extend west from Gallatin Loop to the Missouri River bank, then run north to the Whispering Bay accessory channel, he said.

Gunsch said about 80 percent of the 91 property owners who voted favored the project. One submitted a blank ballot.

With the residents' approval on record, the board is moving forward with the project and paying a design fee of $325,000 to Houston Engineering.

Completion is planned during the 2018 construction season, but authorization must first be granted by the U.S. Army Corps of Engineers and the North Dakota State Engineer's Office.

Earlier precautions were taken when the county partnered with Bismarck in creating the Tavis Road floodgate after the 2011 flood and Bismarck raised Mills Avenue, according to Larson.

A Dec. 14 hearing has tentatively been set to allow those within the special assessment district to protest.

Sixteen residents in the far western Gallatin Loop area signed a petition saying the construction of the levee would damage their yards, said Greg Larson, a member of the water resource district board.

"We 16 receive none of the flood benefit, but receive 100 percent of the street and yard destruction," he read from the statement.

The homeowners signing the petition also asked that a different street be raised near their properties.

Board members agreed they did not want to change the protection plan or do more study at increased cost to those being assessed.

Each property owner in the assessment district can expect to pay an average of $3,790 toward the construction project, Gunsch said. In addition, he said, some of them will pay $943 each toward the system's operation and maintenance.

Sen. Bernie Sanders asking President Obama to halt North Dakota pipeline for full review (KFOR TV, Oklahoma City, and AP)

Posted 7:17 am, October 14, 2016, by KFOR-TV & K. Querry and AP Wire

BISMARCK, N.D. – Vermont Sen. Bernie Sanders and four other Democratic senators are asking President Barack Obama to halt construction of the four-state Dakota Access pipeline until a full environmental review can be completed.

In a statement, the senators said Thursday the request is due to a federal appeals court denying the Standing Rock Sioux's motion for a temporary work stoppage in southern North Dakota within 20 miles of Lake Oahe. The feds stopped construction on land bordering and under the lake in order to review the permitting process.

An environmental review would likely delay the pipeline, which Dallas-based Energy Transfer Partners hopes to complete by the end of the year.

White House spokesman Patrick Rodenbush declined to comment.

The other senators are Patrick Leahy of Vermont, Dianne Feinstein of California, Ben Cardin of Maryland and Ed Markey of Massachusetts.

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

However, the Standing Rock Sioux Tribe says the pipeline would come within a half-mile of their reservation and could disturb or destroy sacred historical sites.

Also, tribal leaders are concerned about the consequences the pipeline would have on their water supply.

North Dakota sheriff out of town almost constantly as pipeline protest drags on (Fargo Forum News Service, WDAZ TV)

- By TU-UYEN TRAN Forum News Service
- 18 hrs ago

FARGO — In mid-August, Cass County Sheriff Paul Laney headed for southeastern Morton County, the scene of protests against the Dakota Access Pipeline, and, except for a few breaks, he's been there ever since. Serving as the elected sheriff of what's by far the state's largest county while consumed by policing the ongoing tribal protests of the oil pipeline has been a daily act of priority-balancing, Laney said.

"I'm very blessed to have a command team that I believe is second to none," Laney said. "They can hold the fort with most things, but there are certainly things that need my attention."

Laney, who is halfway through a third term after first taking office in January 2007, said he feels it's important for him to do everything he can to help Morton County in its time of need because Cass County got help during the flood fights of 2009, 2010 and 2011. In the worst of those floods, in 2009, hundreds of law enforcement officers from around the state and country came to Cass County for more than 40 days, he said.

“The fact that we've had to go out of state to bring in assistance,” he said, “how do we in-state not help first?”

Hundreds of law enforcement officials from all over the state and other parts of the country have been helping police the protests at the request of Morton County Sheriff Kyle Kirchmeier, whose force is stretched thin. Laney has been the operations chief for the law enforcement presence to the protests.

Last week, a representative from the Western States Sheriffs’ Association and the National Sheriffs’ Association said members of both groups have pledged to help Morton County. Laney is a board member for the national group.

Cass County Commission Chairwoman Mary Scherling agreed with Laney’s sentiment that pitching in is worth the heavy strain on the sheriff’s time.

“When we’ve had floods, for example, we've relied on many many outside agencies to help us with all of our sandbagging and dike patrols and search and rescue and so on and so forth,” she said. “The counties don't live in a bubble. We have to help each other and we’re glad to be able to do that.”

Scherling said she knows Laney is in “constant communication” with his subordinates in Fargo. Laney said he’s been able to take care of business back in Cass County by phone, by email or with scanned documents.

Cass County Chief Deputy Col. Rick Majerus is in charge while Laney is out. The sheriff said he does come back to Cass County when he’s absolutely needed.

Marty Johnson, Scherling’s opponent in November’s County Commission election, didn’t return a phone message Wednesday.

The pipeline construction site targeted by protesters is near the Missouri River just north of the Standing Rock Indian Reservation. Protesters, many of whom are American Indians, say construction of the $3.8 billion oil pipeline would desecrate burial grounds and other sites sacred to Indians. They also say a rupture would threaten water quality in the Missouri River, which the pipeline must go under as it continues on its way to Illinois.

Laney estimated that there have been 7,000 to 8,000 protesters, though more recently the numbers have dropped to 2,500 to 3,000 who are in it for the long haul. The majority are peaceful but 300 to 400 are “extremely confrontational,” he said, accusing them of trying to disrupt construction and intimidating farm workers. As of Tuesday, Oct. 11, the protests had led to 123 arrests.

State officials and lawmakers have criticized the lack of financial and law enforcement support from the federal government, given that the U.S. Army Corps of Engineers surprisingly withdrew its required approval of the pipeline’s Missouri River crossing for further review -- an announcement made Sept. 9, just minutes after a federal court ruling in support of the pipeline’s construction.

The number of law enforcement officials on the scene has fluctuated based on the need, though Laney said he couldn’t say how many because of security concerns. Several of his deputies have rotated in and out of Morton County over the last few months, he said, but it’s hard for him to stay away because he’s one of three top commanders on the scene.

Cass County taxpayers won’t bear the cost of deploying the deputies and Laney to the protest, and patrols in Cass County and jail security haven’t been affected, a department spokesman previously told The Forum. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs.

Laney said the days are long there, leaving only enough time to outside of work for him to grab a bite and sleep. Deputies who volunteer to rotate in all work seven days a week with no time off until they rotate out again, he said.

“I’m not going to lie, we’re all tired,” he said, but law enforcement officers expect that they may have to make sacrifices.

Asked how long he thinks he'll be needed in Morton County, Laney said that depends on the protesters.

The company building the pipeline, which was 87 percent complete in North Dakota as of the end of September, said Tuesday that it intends to resume construction promptly after the Standing Rock Sioux Tribe's request to stop work on the pipeline in places where it believes the project will desecrate sacred land was denied Sunday.

Protesters have also said they don't plan to leave anytime soon.

"This currently is a situation that there's no way one agency alone could handle this," Laney said.

Madison City Council member arrested in North Dakota pipeline protest (Bismarck Tribune, Wisconsin State Journal)

- Dean Mosiman, Wisconsin State Journal
- Oct 12, 2016

Madison Ald. Rebecca Kemble was arrested and jailed on Monday while acting as a legal observer of the continuing protests over a controversial oil pipeline in North Dakota that a Native American tribe says threatens tribal land.

Kemble's version of events contrasts sharply with statements by law enforcement, who characterized the event as a riot.

Kemble was among more than two dozen people arrested on Monday at two protests, Morton County Sheriff's Department spokesman Rob Keller said. She faces tentative charges of misdemeanor criminal trespassing, destruction of evidence, resisting arrest and engaging in riot.

She was taken to Morton County jail and released after posting a $1,250 bond Tuesday morning, Keller said.
Actress Shailene Woodley, who starred in the "Divergent" movie series and most recently in Oliver Stone's film "Snowden," was also among those arrested.

Kemble said Tuesday afternoon that she was wearing a hat that identified her as a legal observer and was videotaping a peaceful prayer ceremony when police arrived and began making arrests. She said she intends to fight the charges.

"I wasn't protesting. It wasn't a protest," she said. "I was legal-observing. I was targeted by law enforcement for my camera."

Kemble, 18th District, traveled with her husband over the weekend to Morton County to present the Standing Rock Sioux Tribe with a parchment copy of a recent City Council resolution expressing solidarity with those protesting the pipeline.

The tribe wants construction halted due to concerns of potential contamination of its water supply and says the pipeline will encroach on tribal burial sites and other cultural artifacts.

On Monday morning, Kemble said she went with others to attend a ceremony that started at an encampment on the reservation. The ceremony, she said, moved to the pipeline site near St. Anthony and featured prayer, drumming and dancing by tribes from Argentina and the Arctic Circle.

She said most people were beginning to leave after the event, except for about 16 people sitting under a tepee, when at least 40 police officers arrived.

A commanding officer, Kemble said, told the protesters they faced arrest if an officer touched them. She said most people backed up but police pursued. She said the commanding officer ran at her, grabbed her while she was holding her camera, put her hands behind her back, bound her with a zip tie, and took her camera as evidence, with police taking her and those arrested to jail. A Morton County's Sheriff's Department press release on Monday afternoon describes a different scene.

On Monday morning, authorities got a call that two protesters had locked themselves to equipment on private property near St. Anthony and were arrested and charged with a felony and misdemeanors, the release said. Another arrest was made and the group disbanded.

About two hours later, authorities were alerted to a convoy of about 100 vehicles assembling near the pipeline site, the release said. Law enforcement closed a road and told the protesters to disband. The crowd refused and 24 more people were arrested, it said.

In the statement, Cass County Sheriff Paul Laney said, "While some would like to say this was a protest, this was not a protest — this was a riot."

Kemble rejected the description. "What alternate universe was the sheriff in that day?" she said. "It was so peaceful. The whole day was steeped in prayer and ceremony.

"The police are fear-mongering."

Kemble said she'll present the parchment to tribal leaders Wednesday morning.

Last weekend, the Dane County Sheriff's Office sent 10 deputies from its special events team to the site of the protests, part of a state contingent of 40 members of law enforcement that have gone to provide assistance to the area.

Construction resumed Tuesday on the $3.8 billion, 1,200-mile pipeline on private land about 20 miles from the so-called Red Warrior Camp where thousands of protesters have gathered, The Associated Press reported.

Dean Mosiman covers Madison city government for the Wisconsin State Journal.

GOP Demands Punishment From AG Lynch Over Gold King Mine Disasters – The Daily Caller News Foundation (Washington DC pub)

Republican lawmakers are demanding the Department of Justice explain why criminal charges have not been leveled against an Environmental Protection Agency (EPA) employee allegedly responsible for a massive mine spill in Colorado.

"By not taking up the case, the Department of Justice looks like it is going easy on its colleagues in EPA," three lawmakers with the House Natural Resources Committee wrote Wednesday in a letter to Attorney General Loretta Lynch.

Republican Rep. Rob Bishop of Utah joined fellow GOP colleagues Chairman Jason Chaffetz, also from Utah, and oversight subcommittee chairwoman Cynthia Lummis, who represents Wyoming, to send out the letter Wednesday afternoon.

"Its lack of action on these charges give the appearance of hypocrisy," the lawmakers claim, "and seem to indicate that there is one set of rules for private citizens and another for the federal government."

The Colorado mine spill resulted in three million gallons of dangerous mine waste being dumped into Colorado's Animus River, turning it yellow and poisoning the drinking water for thousands of residents across three states and the Navajo Nation. The spill also dumped more than 880,000 pounds of toxic elements — like lead and arsenic — into the water.

The EPA had tried to keep the identity of the person responsible for the spill under wraps until June, when The Daily Caller News Foundation reported that EPA worker Hays Griswold was in charge at the Gold King Mine during the spill.

Someone removed Griswold's name from an "independent" review of the disaster, according to documents obtained by TheDCNF in June.

An EPA inspector announced Wednesday Bishop's committee wrote the letter that it found evidence an unnamed employee violated the Clean Water Act. The Department of Justice will not pursue the case, a spokesman told reporters, and is instead referring the case to the EPA's leaders.

The lawmakers added that the "EPA disaster deserves the same level of accountability to which private citizens are held."

EPA's failure to hold its employees accountable for last year's leak has become a standard operating procedure.

Senior EPA officials in 2015, for instance, largely ignored complaints by 16 women, mostly employees, accusing one agency official of sexual harassment. The employee got promoted despite the complaints.

Bishop's committee held a hearing in May showing that the EPA paid a registered sex offender to retire rather than terminating his employment.

The child molester was a registered sex offender and was fired in 2014 for violating his probation – but the EPA, as its custom, reinstated him under the Merit Systems Protection Board reinstated him. The employee was eventually paid $55,000 to resign in 2015.

Hurricane-level Winds Possible In Pacific Northwest (CNN)

By Max Blau

CNN, October 13, 2016

Brace yourself, Pacific Northwest. What's left of a typhoon, which has made its way across the ocean, is expected to pummel parts of Oregon and Washington over the next several days.

The National Weather Service has said a pair of strong storms are set to hit the West Coast on Thursday and Saturday.

CNN meteorologist Dave Hennen said parts of Washington and Oregon could see gusts of up to 80 mph near coastal ranges Thursday. According to the weather service, rivers are expected to rise, with flooding remaining most likely in the Olympic Peninsula.

"Areas of ponding on roadways will slow Thursday commutes," the weather service said. "Small creeks and streams will rise and flood as well."

After a brief lull, the fierce winds could whip again through the Northwest at up to 100 mph. Hennen, who described this storm as a "monster," said it has the potential to match the pressure levels of a Category 3 hurricane on the Saffir-Simpson Hurricane Wind Scale. The weather service has cautioned residents to watch out for tree damage due to the high winds.

"Many of the wind-related deaths in western Washington occur when trees topple onto people in cars," it said.

Though it's still too early to tell, the weather service said the Saturday storm could also lead to widespread wind damage, power outages and coastal erosion.

"(There's a chance for) a worst-case scenario leading to a historical and destructive windstorm for the area," it said.

According to Hennen, a third storm may pass through the Pacific Northwest next week.

Fox Island residents approve flood protection plan (Bismarck Tribune)

LEANN ECKROTH Bismarck Tribune 18 hrs ago

A $3.92 million Fox Island flood protection project has been approved 72-18 by property owners, who will pay part of its cost via a special assessment district, the Burleigh County Water Resource District Board announced Wednesday.

The project will involve raising a section of road and adding a levee to safeguard against a 20-foot flood. The Legislature has committed $2.8 million toward its completion, and the Burleigh County Commission has approved funding of $920,000 in yearly installments. Fox Island property owners will pay the balance.

The project was driven by the 2011 Missouri River flooding.

The raising of the road would start at the pump at Tavis Road and move west along Farwest Drive and Gallatin Loop, according to Michael Gunsch of Houston Engineering, consulting engineer for the water resource district. The levee would extend west from Gallatin Loop to the Missouri River bank, then run north to the Whispering Bay accessory channel, he said.

Gunsch said about 80 percent of the 91 property owners who voted favored the project. One submitted a blank ballot.

With the residents' approval on record, the board is moving forward with the project and paying a design fee of $325,000 to Houston Engineering.

Completion is planned during the 2018 construction season, but authorization must first be granted by the U.S. Army Corps of Engineers and the North Dakota State Engineer's Office.

Earlier precautions were taken when the county partnered with Bismarck in creating the Tavis Road floodgate after the 2011 flood and Bismarck raised Mills Avenue, according to Larson.

A Dec. 14 hearing has tentatively been set to allow those within the special assessment district to protest.

Sixteen residents in the far western Gallatin Loop area signed a petition saying the construction of the levee would damage their yards, said Greg Larson, a member of the water resource district board.

"We 16 receive none of the flood benefit, but receive 100 percent of the street and yard destruction," he read from the statement.

The homeowners signing the petition also asked that a different street be raised near their properties.

Board members agreed they did not want to change the protection plan or do more study at increased cost to those being assessed.

Each property owner in the assessment district can expect to pay an average of $3,790 toward the construction project, Gunsch said. In addition, he said, some of them will pay $943 each toward the system's operation and maintenance.

Sen. Bernie Sanders asking President Obama to halt North Dakota pipeline for full review (KFOR TV, Oklahoma City, and AP)

Posted 7:17 am, October 14, 2016, by KFOR-TV & K. Querry and AP Wire

BISMARCK, N.D. – Vermont Sen. Bernie Sanders and four other Democratic senators are asking President Barack Obama to halt construction of the four-state Dakota Access pipeline until a full environmental review can be completed.

In a statement, the senators said Thursday the request is due to a federal appeals court denying the Standing Rock Sioux’s motion for a temporary work stoppage in southern North Dakota

within 20 miles of Lake Oahe. The feds stopped construction on land bordering and under the lake in order to review the permitting process.

An environmental review would likely delay the pipeline, which Dallas-based Energy Transfer Partners hopes to complete by the end of the year.

White House spokesman Patrick Rodenbush declined to comment.

The other senators are Patrick Leahy of Vermont, Dianne Feinstein of California, Ben Cardin of Maryland and Ed Markey of Massachusetts.

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

However, the Standing Rock Sioux Tribe says the pipeline would come within a half-mile of their reservation and could disturb or destroy sacred historical sites.

Also, tribal leaders are concerned about the consequences the pipeline would have on their water supply.

North Dakota sheriff out of town almost constantly as pipeline protest drags on (Fargo Forum News Service, WDAZ TV)

- By TU-UYEN TRAN Forum News Service
- 18 hrs ago

FARGO — In mid-August, Cass County Sheriff Paul Laney headed for southeastern Morton County, the scene of protests against the Dakota Access Pipeline, and, except for a few breaks, he's been there ever since. Serving as the elected sheriff of what's by far the state's largest county while consumed by policing the ongoing tribal protests of the oil pipeline has been a daily act of priority-balancing, Laney said.

"I'm very blessed to have a command team that I believe is second to none," Laney said. "They can hold the fort with most things, but there are certainly things that need my attention."

Laney, who is halfway through a third term after first taking office in January 2007, said he feels it's important for him to do everything he can to help Morton County in its time of need because Cass County got help during the flood fights of 2009, 2010 and 2011. In the worst of those floods, in 2009, hundreds of law enforcement officers from around the state and country came to Cass County for more than 40 days, he said.

"The fact that we've had to go out of state to bring in assistance," he said, "how do we in-state not help first?"

Hundreds of law enforcement officials from all over the state and other parts of the country have been helping police the protests at the request of Morton County Sheriff Kyle Kirchmeier, whose force is stretched thin. Laney has been the operations chief for the law enforcement presence to the protests.

Last week, a representative from the Western States Sheriffs' Association and the National Sheriffs' Association said members of both groups have pledged to help Morton County. Laney is a board member for the national group.

Cass County Commission Chairwoman Mary Scherling agreed with Laney's sentiment that pitching in is worth the heavy strain on the sheriff's time.

“When we've had floods, for example, we've relied on many many outside agencies to help us with all of our sandbagging and dike patrols and search and rescue and so on and so forth,” she said. “The counties don't live in a bubble. We have to help each other and we're glad to be able to do that.”

Scherling said she knows Laney is in “constant communication” with his subordinates in Fargo. Laney said he's been able to take care of business back in Cass County by phone, by email or with scanned documents.

Cass County Chief Deputy Col. Rick Majerus is in charge while Laney is out. The sheriff said he does come back to Cass County when he's absolutely needed.

Marty Johnson, Scherling's opponent in November's County Commission election, didn't return a phone message Wednesday.

The pipeline construction site targeted by protesters is near the Missouri River just north of the Standing Rock Indian Reservation. Protesters, many of whom are American Indians, say construction of the $3.8 billion oil pipeline would desecrate burial grounds and other sites sacred to Indians. They also say a rupture would threaten water quality in the Missouri River, which the pipeline must go under as it continues on its way to Illinois.

Laney estimated that there have been 7,000 to 8,000 protesters, though more recently the numbers have dropped to 2,500 to 3,000 who are in it for the long haul. The majority are peaceful but 300 to 400 are “extremely confrontational,” he said, accusing them of trying to disrupt construction and intimidating farm workers. As of Tuesday, Oct. 11, the protests had led to 123 arrests.

State officials and lawmakers have criticized the lack of financial and law enforcement support from the federal government, given that the U.S. Army Corps of Engineers surprisingly withdrew its required approval of the pipeline's Missouri River crossing for further review -- an announcement made Sept. 9, just minutes after a federal court ruling in support of the pipeline's construction.

The number of law enforcement officials on the scene has fluctuated based on the need, though Laney said he couldn't say how many because of security concerns. Several of his deputies have rotated in and out of Morton County over the last few months, he said, but it's hard for him to stay away because he's one of three top commanders on the scene.

Cass County taxpayers won't bear the cost of deploying the deputies and Laney to the protest, and patrols in Cass County and jail security haven't been affected, a department spokesman previously told The Forum. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs.

Laney said the days are long there, leaving only enough time to outside of work for him to grab a bite and sleep. Deputies who volunteer to rotate in all work seven days a week with no time off until they rotate out again, he said.

“I'm not going to lie, we're all tired,” he said, but law enforcement officers expect that they may have to make sacrifices.

Asked how long he thinks he'll be needed in Morton County, Laney said that depends on the protesters.

The company building the pipeline, which was 87 percent complete in North Dakota as of the end of September, said Tuesday that it intends to resume construction promptly after the Standing Rock Sioux Tribe's

request to stop work on the pipeline in places where it believes the project will desecrate sacred land was denied Sunday.

Protesters have also said they don't plan to leave anytime soon.

"This currently is a situation that there's no way one agency alone could handle this," Laney said.

Madison City Council member arrested in North Dakota pipeline protest (Bismarck Tribune, Wisconsin State Journal)

- Dean Mosiman, Wisconsin State Journal
- Oct 12, 2016

Madison Ald. Rebecca Kemble was arrested and jailed on Monday while acting as a legal observer of the continuing protests over a controversial oil pipeline in North Dakota that a Native American tribe says threatens tribal land.

Kemble's version of events contrasts sharply with statements by law enforcement, who characterized the event as a riot.

Kemble was among more than two dozen people arrested on Monday at two protests, Morton County Sheriff's Department spokesman Rob Keller said. She faces tentative charges of misdemeanor criminal trespassing, destruction of evidence, resisting arrest and engaging in riot.

She was taken to Morton County jail and released after posting a $1,250 bond Tuesday morning, Keller said.
Actress Shailene Woodley, who starred in the "Divergent" movie series and most recently in Oliver Stone's film "Snowden," was also among those arrested.

Kemble said Tuesday afternoon that she was wearing a hat that identified her as a legal observer and was videotaping a peaceful prayer ceremony when police arrived and began making arrests. She said she intends to fight the charges.

"I wasn't protesting. It wasn't a protest," she said. "I was legal-observing. I was targeted by law enforcement for my camera."

Kemble, 18th District, traveled with her husband over the weekend to Morton County to present the Standing Rock Sioux Tribe with a parchment copy of a recent City Council resolution expressing solidarity with those protesting the pipeline.

The tribe wants construction halted due to concerns of potential contamination of its water supply and says the pipeline will encroach on tribal burial sites and other cultural artifacts.

On Monday morning, Kemble said she went with others to attend a ceremony that started at an encampment on the reservation. The ceremony, she said, moved to the pipeline site near St. Anthony and featured prayer, drumming and dancing by tribes from Argentina and the Arctic Circle.

She said most people were beginning to leave after the event, except for about 16 people sitting under a tepee, when at least 40 police officers arrived.

A commanding officer, Kemble said, told the protesters they faced arrest if an officer touched them. She said most people backed up but police pursued. She said the commanding officer ran at her, grabbed her while she was holding her camera, put her hands behind her back, bound her with a zip tie, and took her camera as evidence, with police taking her and those arrested to jail. A Morton County's Sheriff's Department press release on Monday afternoon describes a different scene.

On Monday morning, authorities got a call that two protesters had locked themselves to equipment on private property near St. Anthony and were arrested and charged with a felony and misdemeanors, the release said. Another arrest was made and the group disbanded.

About two hours later, authorities were alerted to a convoy of about 100 vehicles assembling near the pipeline site, the release said. Law enforcement closed a road and told the protesters to disband. The crowd refused and 24 more people were arrested, it said.

In the statement, Cass County Sheriff Paul Laney said, "While some would like to say this was a protest, this was not a protest — this was a riot."

Kemble rejected the description. "What alternate universe was the sheriff in that day?" she said. "It was so peaceful. The whole day was steeped in prayer and ceremony.

"The police are fear-mongering."

Kemble said she'll present the parchment to tribal leaders Wednesday morning.

Last weekend, the Dane County Sheriff's Office sent 10 deputies from its special events team to the site of the protests, part of a state contingent of 40 members of law enforcement that have gone to provide assistance to the area.

Construction resumed Tuesday on the $3.8 billion, 1,200-mile pipeline on private land about 20 miles from the so-called Red Warrior Camp where thousands of protesters have gathered, The Associated Press reported.

UTAH:

GOP Demands Punishment From AG Lynch Over Gold King Mine Disasters – The Daily Caller News Foundation (Washington DC pub)

Republican lawmakers are demanding the Department of Justice explain why criminal charges have not been leveled against an Environmental Protection Agency (EPA) employee allegedly responsible for a massive mine spill in Colorado.

“By not taking up the case, the Department of Justice looks like it is going easy on its colleagues in EPA,” three lawmakers with the House Natural Resources Committee wrote Wednesday in a letter to Attorney General Loretta Lynch.

Republican Rep. Rob Bishop of Utah joined fellow GOP colleagues Chairman Jason Chaffetz, also from Utah, and oversight subcommittee chairwoman Cynthia Lummis, who represents Wyoming, to send out the letter Wednesday afternoon.

“Its lack of action on these charges give the appearance of hypocrisy,” the lawmakers claim, “and seem to indicate that there is one set of rules for private citizens and another for the federal government.”

The Colorado mine spill resulted in three million gallons of dangerous mine waste being dumped into Colorado’s Animus River, turning it yellow and poisoning the drinking water for thousands of residents across three states and the Navajo Nation. The spill also dumped more than 880,000 pounds of toxic elements — like lead and arsenic — into the water.

The EPA had tried to keep the identity of the person responsible for the spill under wraps until June, when The Daily Caller News Foundation reported that EPA worker Hays Griswold was in charge at the Gold King Mine during the spill.

Someone removed Griswold’s name from an “independent” review of the disaster, according to documents obtained by TheDCNF in June.

An EPA inspector announced Wednesday Bishop’s committee wrote the letter that it found evidence an unnamed employee violated the Clean Water Act. The Department of Justice will not pursue the case, a spokesman told reporters, and is instead referring the case to the EPA’s leaders.

The lawmakers added that the “EPA disaster deserves the same level of accountability to which private citizens are held.”

EPA’s failure to hold its employees accountable for last year’s leak has become a standard operating procedure.

Senior EPA officials in 2015, for instance, largely ignored complaints by 16 women, mostly employees, accusing one agency official of sexual harassment. The employee got promoted despite the complaints.

Bishop’s committee held a hearing in May showing that the EPA paid a registered sex offender to retire rather than terminating his employment.

The child molester was a registered sex offender and was fired in 2014 for violating his probation – but the EPA, as its custom, reinstated him under the Merit Systems Protection Board reinstated him. The employee was eventually paid $55,000 to resign in 2015.

FEMA-RELATED STORIES:

Hurricane-level Winds Possible In Pacific Northwest (CNN)

By Max Blau

CNN, October 13, 2016

Brace yourself, Pacific Northwest. What's left of a typhoon, which has made its way across the ocean, is expected to pummel parts of Oregon and Washington over the next several days.

The National Weather Service has said a pair of strong storms are set to hit the West Coast on Thursday and Saturday.

CNN meteorologist Dave Hennen said parts of Washington and Oregon could see gusts of up to 80 mph near coastal ranges Thursday. According to the weather service, rivers are expected to rise, with flooding remaining most likely in the Olympic Peninsula.

"Areas of ponding on roadways will slow Thursday commutes," the weather service said. "Small creeks and streams will rise and flood as well."

After a brief lull, the fierce winds could whip again through the Northwest at up to 100 mph. Hennen, who described this storm as a "monster," said it has the potential to match the pressure levels of a Category 3 hurricane on the Saffir-Simpson Hurricane Wind Scale. The weather service has cautioned residents to watch out for tree damage due to the high winds.

"Many of the wind-related deaths in western Washington occur when trees topple onto people in cars," it said.

Though it's still too early to tell, the weather service said the Saturday storm could also lead to widespread wind damage, power outages and coastal erosion.

"(There's a chance for) a worst-case scenario leading to a historical and destructive windstorm for the area," it said.

According to Hennen, a third storm may pass through the Pacific Northwest next week.

Thanks, Jotham. Our Regional ESF 13 liaison reported out this morning that the North Dakota Department of Emergency Services (NDDES) and State Police are in touch with DOJ on grants and/or the reprogramming of current law enforcement grants to help cover the security expenses associated with the protest. No indication so far from NDDES that they will seek a Stafford Act emergency declaration. I will let you know if we hear anything different.

FYSA – I've gotten two questions in the last two days about the possibility emergency declaration to support state and local law enforcement responding to the protests over the Dakota pipeline. Yesterday from Roger Jones in R8 (who is in DC for a few weeks) and today from OCFO-ExCo. I advised both that a declaration is unlikely for this type of event and pointed to MD's request for the Baltimore civil unrest as recent precedent.

Hi Diana,

We have looked and this is all I can tell you:

1. FEMA Region VIII Regional Training Manager (RTM) has no records of any training delivered to North Dakota by the FEMA Region VIII National Preparedness Division between October 28, 2014 and October 28, 2016.
2. FEMA Region VIII RTM has no records of any training conducted for the state of North Dakota by any other division within FEMA Region VIII, between October 28, 2014 and October 28, 2016.
3. FEMA Region VIII RTM does not keep records of trainings conducted in the field during disasters at Joint Field Offices (JFO's) by Disaster Field Training Officers (DFTOs) as these are sent in by the Training Unit Lead at disasters directly to the DFTO Office at HQ. For classes taught at JFOs, a request will have to be sent to the DFTO Cadre at FEMA HQ.
4. FEMA Region VIII RTM does not keep records of any training given to North Dakota through the Emergency Management Institute (EMI), or the National Fire Academy (NFA). This process is handled by the State Training Officer (an employee of the State of North Dakota) and the staff at EMI/NFA in Emmitsburg, Maryland.
5. FEMA Region VIII RTM does not keep records of any training given to North Dakota through the Centers for Domestic Preparedness (CDP). This process is handled by the State Training Officer and the staff at CDP located in Anniston, Alabama.
6. FEMA Region VIII RTM does not have any records, for any time frame, for any class labeled *"Field Force Extrication Tactics"(https://cdp.dhs.gov/find-training/law-enforcement/course/PER-202).*

If you want to take this email as my response, let me know. If I need to retype this into some other type of response, let me know that as well.

Hello JT –
Let's start with this:
If you already have a listing of courses (course name, date, location), whatever format it's in will be fine.
We are not required to devise new report formats for a FOIA response.
If you don't have an existing list, a simple list (sample shown below) will do.

Course name	Date(s)	Location
Government Ethics	Jan 10, 2016	Bismarck, ND
DHS Travel Card Training	Feb 20, 2016	Minot, ND
Introduction to Equal Rights	March 15, 2016	Fargo, ND
Etc.		

I want to talk to Chris Americanos again about how much detail we should provide (I am concerned that a list of instructors' names, and participants' names and grades may be Privacy Act information…)

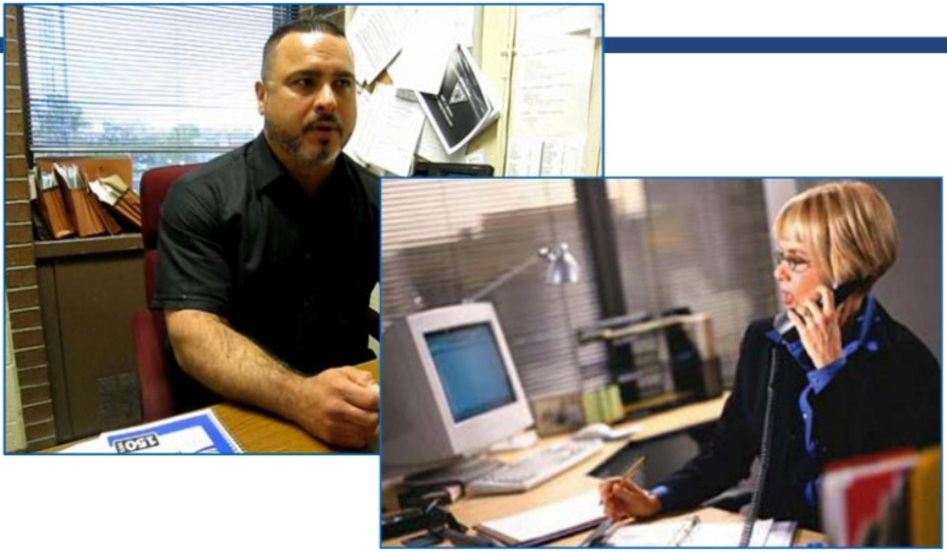
--- Diana

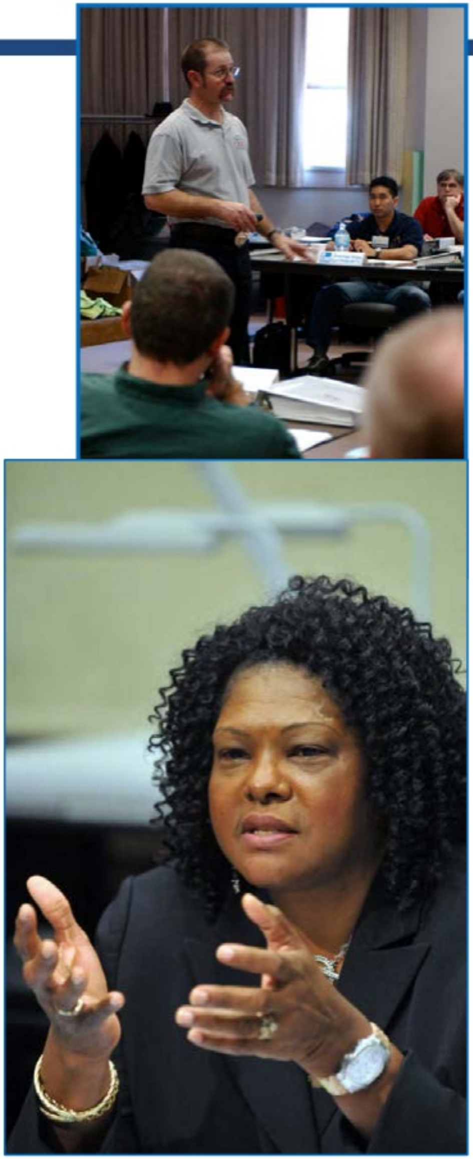
Unit 3:
Leading and Managing Recovery

Objectives

After completing this unit, you will be able to…

- Explain the importance of proper documentation
- Describe the function of an Unmet Needs Committee
- Identify sources of financial assistance available to the community
- Describe the actions a community leader can take to lead the community through recovery
- Describe the role of the Recovery Leader
- Applying learning points to solve problems faced by a Recovery Task Force.





What is the difference between Leadership and Management?

Managing the Details

- Cost recovery
- Creative financing
- Documentation
- Project management
- Legal issues
- Staffing Issues
- Assistance to disaster victims

Cost Recovery

The federal portion of disaster assistance is to help communities recover to safe, secure and sanitary conditions – NOT to make the community whole again.

Federal Programs

Federal Disaster Assistance Response and Recovery Programs: Brief Summaries

(Congressional Research Service: July 9, 2015)

Creative Financing

- Restructure local budget
- Insurance
- Financing
- General obligation bonds
- Revenue bonds
- Diverse partnerships

Assistance to Disaster Survivors

While it is not generally the role of local government to provide direct assistance to individuals and families, it may be important to help organize these services in a way that enhances access to members of the community.

RMY
AMERICAN KENNEL CLUB
PET DISASTER RELIEF

Assistance to Disaster Survivors

Unmet Needs Committee is a unique organization that many communities have adopted as part of their recovery planning. The Committee acts as a safety net by providing creative ways to provide help when traditional assistance programs fall short.

Documentation

Documentation of activities and costs is an essential part of disaster recovery.

Documentation

- Does your jurisdiction have documentation procedures in place?
- Are there procurement procedures in place?
- Are there policies in place for disaster pay rates, overtime, benefits?
- Have you documented force account labor rates?
- Are there specific disaster recovery documentation requirements in your State?
- Who will be responsible for developing these policies and procedures?

Legal Issues

Ensure that all legal documents and policies are reviewed by legal staff.

What are some of the kinds of documents that should be reviewed?

Staffing Considerations

Local governments will need adequate numbers of trained staff to manage the workload of recovery efforts.

FEMA

Staffing Considerations

- How many staff will be needed?
- Can existing staff be temporarily reassigned?
- What training will be required?
- Where will the additional staff work?
- What expertise is needed?
- Where can additional staff be obtained?
- Are existing staff members also disaster victims?
- How will the stress of the recovery be managed?

FEMA

Leading the Recovery

To successfully lead the recovery and establish a vision for the future, a leader must have a solid understanding of the whole community.

ASH GROVE CEMENT

Activity 3.1: Who Will Lead?

Purpose: Consider attributes of a recovery leader.

Instructions:

1. Review list of attributes.
2. Recommend any additional attributes you believe are critical to the success of a recovery leader.
3. Identify candidates within your jurisdiction that meet or exceed the attributes.

10 minutes

Leading the Recovery

- Vision for recovery
- Visible
- Proactive
- Set the tone for cooperation
- Involve community partners
- Gain support for recovery initiatives
- Lobby for support
- Host VIP's president, partners, potential benefactors

FEMA

Leading the Recovery

Establish a vision for recovery.

Leading the Recovery

Leaders must set the tone for cooperation.

Video: Selling Waterbury

May 2, 2012 -- Wilmington, Vermont
FEMA

Leading the Recovery

Involve community partners in recovery planning and programs.

Boy Scouts of America
EXIT

Inter-jurisdictional Relationships

A leader will need to establish trust and cooperation with outside agencies and other jurisdictions to help aid the recovery effort.

- **Mutual aid**
- **Mutual interests**
- **Cross-jurisdiction damage**
- **Common issues: City-County-State**

Recovery Manager

The roles of the Recovery Manager are:

- To coordinate the recovery program with leadership.
- To oversee a broad range of projects and programs.
- To manage the details
- To ensure that management staff are working together to reach the established goals and community vision for recovery.

Recovery Task Force

One way leaders and managers can help establish a broad vision and incorporate community goals into the recovery strategy is to establish a Recovery Task Force.

FEMA

Activity 3.2

Recovery Task Force Challenges

In your table group, review your assigned Recovery Task Force topic, and answer each of the questions provided. Prepare responses on easel to share with class.

45 minutes

FEMA

Unit Summary

In this unit you have learned about:

- The importance of proper documentation
- The function of an Unmet Needs Committee
- Sources of financial assistance available to the community
- The actions a community leader can take to lead the community through recovery
- The role of the Recovery Leader
- Applying learning points to solve problems faced by a Recovery Task Force

Unit 5

Local Capabilities and Challenges

Unit Objectives

After completing this unit, you will be able to:

- Explain the roles of local agencies for functions including housing, public works, building inspection, planning, and community development.
- Identify the six community planning tools that can assist in disaster recovery?
- Describe the challenges and opportunities related to short and long term housing issues.

Planning and Community Development

The Role of Community Planning

- Analyze existing community development problems and issues.
- Identify options and solutions.
- Develop a vision for the community's future.

FEMA

Six Planning Tools

- General Plan and Elements
- Zoning Ordinance
- Subdivision Regulations
- Capital Improvements Programming
- Transfer of Development Rights
- Mapping

FEMA

General Plan and Elements

The Land Use or General Plan and Elements sets goals for these uses:

- Land Use
- Transportation
- Safety
- Public Utilities
- Open Space

Zoning Ordinance

A zoning ordinance identifies allowable land uses within the community.

Subdivision Regulations

Subdivision is the process by which land is divided into smaller parcels.

Capital Improvements Programming

Capital improvements can help direct future growth or rebuilding.

CITY OF BAY ST LOUIS CENTRAL FIRE HOUSE

Transfer of Development Rights

Transfer of Development rights may provide options during disaster recovery.

Mapping

The Planning Department's Geographic Information System (GIS) and mapping resources are valuable tools for recovery planning.

Housing

Issues and Challenges

Why does a community with significant housing damage need to be concerned about temporary housing, and replacement housing for its citizens?

FEMA

Short- and Long-Term Options

- Temporary housing
- Replacement housing

Temporary Housing

People whose homes are not habitable, safe, sanitary, or secure will need temporary housing.

FEMA

Temporary Housing Resources (1 of 2)

When there is NOT a Presidential Disaster Declaration, contact:

- **Your State's multi-family housing association.**
- **Local nonprofit housing providers and developers.**
- **State Housing Finance Agency (HFA) or Economic Development Agency (EDA).**
- **The American Red Cross.**
- **Your Unmet Needs Committee.**

Temporary Housing Resources (2 of 2)

When a Presidential Disaster Declaration is made, FEMA will activate the National Disaster Housing Strategy, which includes:

- **Providing repair and replacement assistance.**
- **Cataloging vacant rental units.**

APARTMENTS
FOR RENT

- **Providing manufactured and alternative interim housing (as a last resort).**

Short- and Long-Term Temporary Housing

- **Short-Term**
  - **Onsite travel trailers (manufactured) units**
  - **Alternative housing (tents)**
- **Long-Term**
  - **Mobile homes**

New Site Development Considerations

- Size of the development: determine whether there should be multiple sites.
- Proximity to: transportation, shopping, churches, jobs, schools, etc.
- Large developments may need play areas, gathering places, onsite services (VOAD, Recovery Center).
- Site approval and preparation may be a lengthy process.

Replacement Housing

Avoid the rush to replace lost housing.

FEMA

Improvements

- **Disaster recovery can be an opportunity.**
- **Recovery funds can be used to improve the community rather than put it back the way it was.**

Community Revitalization

The goal of housing recovery is two-fold:

- Help survivors repair or replace housing.
- Revitalize the community's housing stock and tax base.

Potential Resources

SBA
U.S. Small Business Administration
DISASTER ASSISTANCE
Long-term Low-interest Loans
Homeowners & Ren
nesses of All Si
0-659-2

Potential housing recovery resources include:

- **Financial options**
- **Housing recovery assistance**

Financial Options

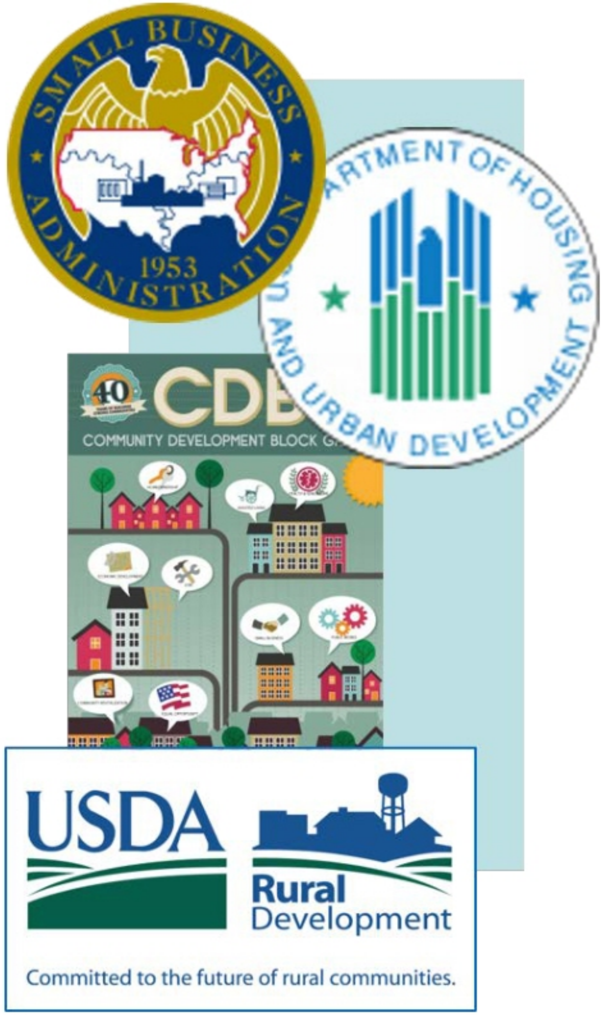
Financial resources available to repair and replace housing:

- Insurance
- Small Business Administration (SBA) Disaster Assistance Loans
- State and/or Federal Disaster Assistance
- Non-Governmental Organizations (NGO) Resources and Services

SBA
DISASTER ASSISTANCE

Non-FEMA Government Assistance

- SBA
- Department of Housing and Urban Development (HUD) Community Development Block Grants (CDBG)
- United States Department of Agriculture (USDA) Rural Development (RD) housing programs



SMALL BUSINESS ADMINISTRATION
1953
DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT
40
CDB
COMMUNITY DEVELOPMENT BLOCK G
USDA
Rural Development
Committed to the future of rural communities.

Public Funds

In long-term housing recovery, the role of public funds is to fill gaps, to return survivors to pre-disaster housing conditions, and to address health and safety deficiencies.

Other Resources

Nonprofit housing providers assist with:

- Housing counseling
- Volunteer coordination
- Job site supervision and guidance

- New home and home rehabilitation construction management
- Financial aid

Providers Identified

Identifying local nonprofit housing providers:

- **Community Action Agencies/Programs (CAP)**
- **Neighborhood Housing Services (NHS)**

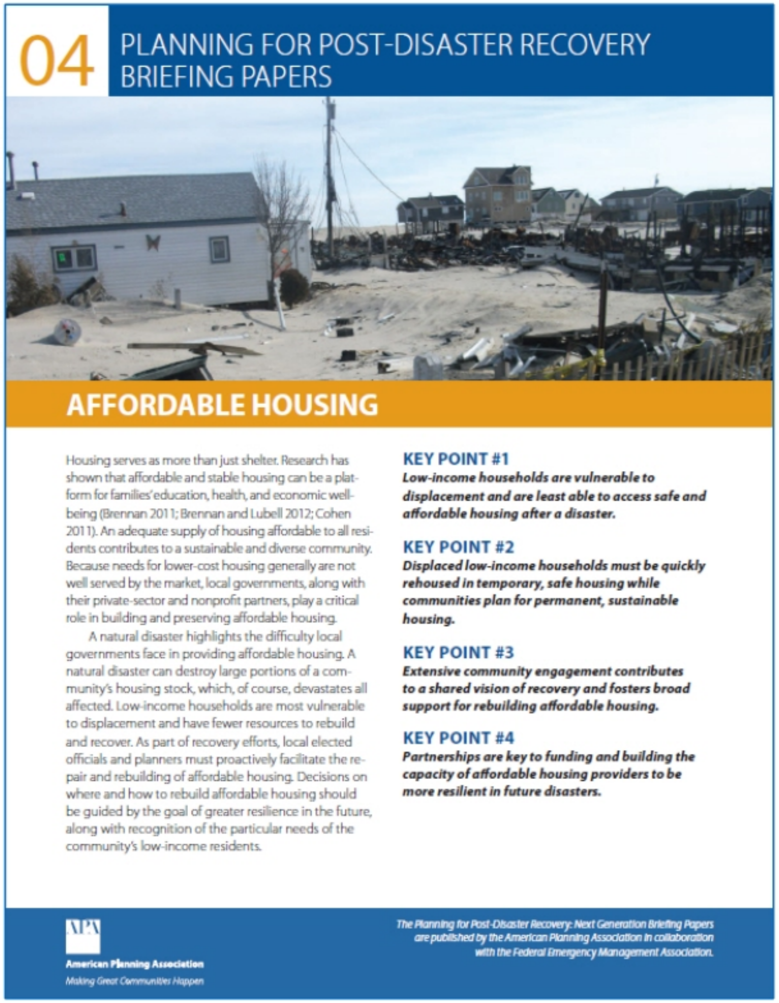
- **Community Development Organizations**
- **Community-Based Organizations (CBO)**

FEMA

Activity 5.1: Case Study - APA Briefing - Housing

Purpose: Examine issues relating to affordable housing during recovery.

Instructions: Individually read the 5 page briefing, discuss as a class.



04 PLANNING FOR POST-DISASTER RECOVERY BRIEFING PAPERS

AFFORDABLE HOUSING

Housing serves as more than just shelter. Research has shown that affordable and stable housing can be a platform for families' education, health, and economic well-being (Brennan 2011; Brennan and Lubell 2012; Cohen 2011). An adequate supply of housing affordable to all residents contributes to a sustainable and diverse community. Because needs for lower-cost housing generally are not well served by the market, local governments, along with their private-sector and nonprofit partners, play a critical role in building and preserving affordable housing.

A natural disaster highlights the difficulty local governments face in providing affordable housing. A natural disaster can destroy large portions of a community's housing stock, which, of course, devastates all affected. Low-income households are most vulnerable to displacement and have fewer resources to rebuild and recover. As part of recovery efforts, local elected officials and planners must proactively facilitate the repair and rebuilding of affordable housing. Decisions on where and how to rebuild affordable housing should be guided by the goal of greater resilience in the future, along with recognition of the particular needs of the community's low-income residents.

KEY POINT #1

Low-income households are vulnerable to displacement and are least able to access safe and affordable housing after a disaster.

KEY POINT #2

Displaced low-income households must be quickly rehoused in temporary, safe housing while communities plan for permanent, sustainable housing.

KEY POINT #3

Extensive community engagement contributes to a shared vision of recovery and fosters broad support for rebuilding affordable housing.

KEY POINT #4

Partnerships are key to funding and building the capacity of affordable housing providers to be more resilient in future disasters.

American Planning Association
Making Great Communities Happen

The Planning for Post-Disaster Recovery: Next Generation Briefing Papers are published by the American Planning Association in collaboration with the Federal Emergency Management Association.

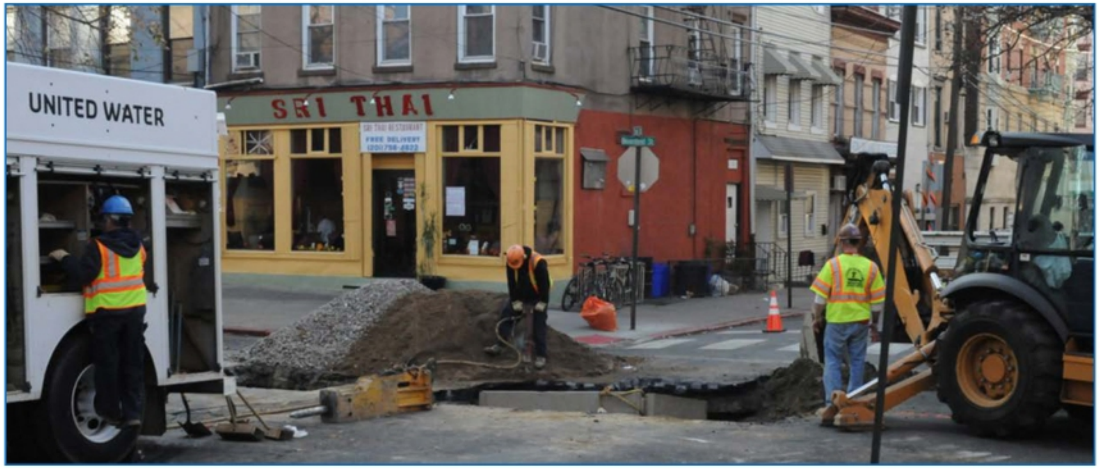
FEMA

Public Works

FEMA

Critical Issues for Public Works

- Transportation systems and facilities
- Drainage and flood control systems
- Water and sewer utility systems
- Solid waste – collection/continuity
- Solid waste – debris removal/disposal
- Recovery and mitigation support services



FEMA

Four General Areas of Activity

- Transportation and Lifelines
- Utilities
- Debris Management
- Support Activities

Transportation Systems

- Roads
- Bridges
- Traffic Control

ROAD CLOSED
ROAD CLOSED
WAFFLE HOUSE

Other Transportation Systems

- Transportation facilities
    - Airports
    - Seaports
    - Rail systems
    - Mass transit systems
    - Tunnels

Lifelines

UTILITY
WORK
AHEAD

- Electrical power
- Telecommunication
- Cable
- Internet
- Natural Gas

Important Issues to Consider

- Primary re-start locations
  - Prioritize for community needs
  - Coordinate the work and priorities
- Publicize the plan
  - Communicate with stakeholders
  - Establish clear expectations

FEMA

Drainage & Flood Control Systems

- Identify critical areas in your community.
- Determine what areas and structures are most vulnerable.
- Prioritize cleaning and repair based on risk assessment.
- Identify process for damage assessment of these systems and structures.
- If multiple jurisdictions, who will coordinate?

FEMA

Sanitary Sewer Systems

- Ownership and control
- Status of key components
- Isolation points
- Availability of spare parts and equipment

Potable Water Systems

- Ownership and control
- Status of key components isolation points
- Availability of spare parts and equipment

WATER
OK
SLOW
Ford

Solid Waste – Collection/Continuity

- Who will carry out normal collection operations?
- Are there drawbacks to one contractor doing both routine and debris operations?
- Will the traditional disposal sites change their billing or operational policies and procedures?
- Will commercial collection needs increase during the recovery period due to increased business and restocking?

Solid Waste – Debris Removal/Disposal

- Determine community's role.
- Determine Temporary Debris Storage and Reduction sites (TDSR) and permit requirements.
- Publicize plans and requirements.
- Understand Federal requirements for reimbursement of debris-related costs.

FEMA

Debris Management

- Once debris is moved to TDSR, reduction is an efficient method to reduce material disposal costs.
  - Recycle: metal, glass, plastics, paper, white goods
  - For other combustibles:
    - Air curtain burner
    - Grinders/chippers
    - Composting
  - Authority to demolish structures.

FEMA

Hazardous Material Collection

- How will hazardous materials be collected?
- Determine protocols for collection (OSHA/EPA).
- How and to whom will spills or leaks be communicated?
- Communicate the need to separate from other debris.
- Determine final disposal plan.

FEMA

Technical Support – Recovery

Provide support to other recovery team members for:

- **Damage assessment.**
- **Engineering, fleet, facilities, and resources.**
- **Liaison with utilities and agencies.**

New York State
OEM
DHSES

Technical Support – Mitigation

- Determine how mitigation can be incorporated into recovery.
- Evaluate/identify areas of future risk.
- Identify mitigation techniques.
- Determine financing options.

Continuity

In most cases, there are services that must be provided despite the recovery process.

- Identify areas and services that have priority.
- Determine how to staff both recovery and continuity operations.
- Plan how and when to transition forces from one to the other.

Transition

Determining when to transition from recovery to normal operations is often difficult.

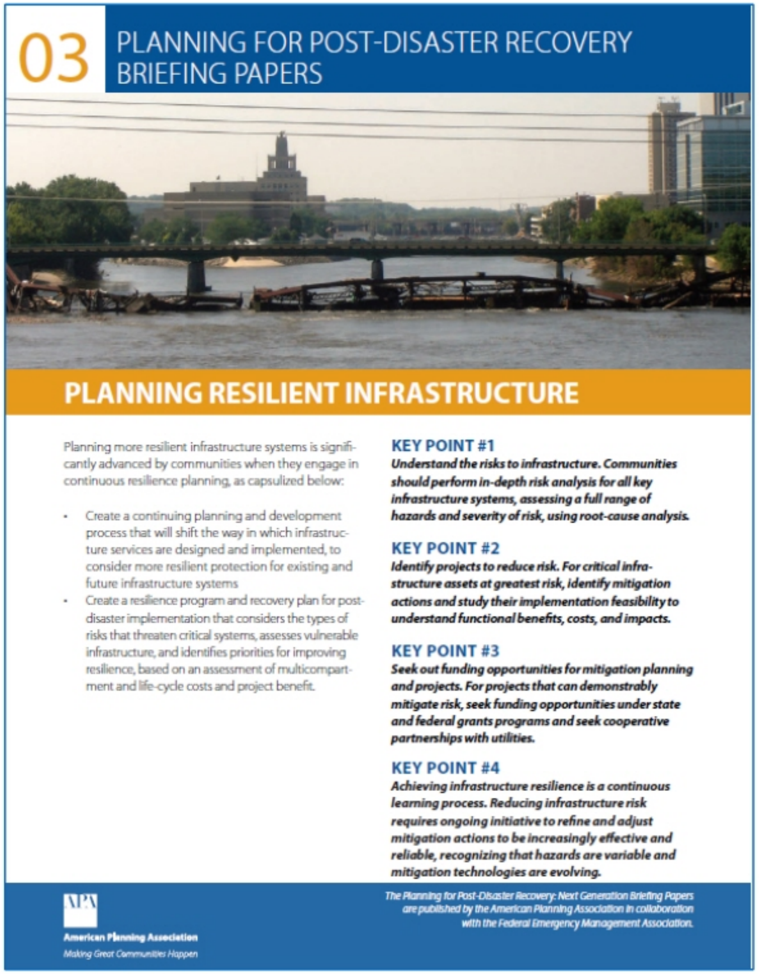
- Who determines when this transition will take place?
- How will employees be transitioned?
- What operations will be transitioned first?
- Are there new priorities or policies?
- How will these new policies be communicated?

FEMA

Activity 5.2: Case Study - APA Briefing - Infrastructure

Purpose: Examine issues relating to infrastructure during recovery.

Instructions: Individually read the 5 page briefing, discuss as a class.



03 PLANNING FOR POST-DISASTER RECOVERY BRIEFING PAPERS

PLANNING RESILIENT INFRASTRUCTURE

Planning more resilient infrastructure systems is significantly advanced by communities when they engage in continuous resilience planning, as capsulized below:

- Create a continuing planning and development process that will shift the way in which infrastructure services are designed and implemented, to consider more resilient protection for existing and future infrastructure systems
- Create a resilience program and recovery plan for post-disaster implementation that considers the types of risks that threaten critical systems, assesses vulnerable infrastructure, and identifies priorities for improving resilience, based on an assessment of multicompartment and life-cycle costs and project benefit.

KEY POINT #1

Understand the risks to infrastructure. Communities should perform in-depth risk analysis for all key infrastructure systems, assessing a full range of hazards and severity of risk, using root-cause analysis.

KEY POINT #2

Identify projects to reduce risk. For critical infrastructure assets at greatest risk, identify mitigation actions and study their implementation feasibility to understand functional benefits, costs, and impacts.

KEY POINT #3

Seek out funding opportunities for mitigation planning and projects. For projects that can demonstrably mitigate risk, seek funding opportunities under state and federal grants programs and seek cooperative partnerships with utilities.

KEY POINT #4

Achieving infrastructure resilience is a continuous learning process. Reducing infrastructure risk requires ongoing initiative to refine and adjust mitigation actions to be increasingly effective and reliable, recognizing that hazards are variable and mitigation technologies are evolving.

American Planning Association
Making Great Communities Happen

The Planning for Post-Disaster Recovery: Next Generation Briefing Papers are published by the American Planning Association in collaboration with the Federal Emergency Management Association.

FEMA

Building Inspection

Building Inspection

Building inspection services may be needed for:

- Damage Assessment
- Re-Entry and Access Policies
- Temporary Protection vs. Reconstruction
- Contractor Licensing and Approvals
- Code Issues
- Mitigation Activities
- Demolition of Structures
- Building-Related Debris Management

FEMA

Damage Assessment

- Establishes a picture of scope and impact.
- Supports application for declaration and funding.
- Requires trained staff and a damage assessment procedure.
- Requires cooperation with other agencies and private sector.
- Makes use of technology where possible.

Trained Staff

- Reporting methods and structure
- Procedures and report format
- Uniform marking code
- Lines of responsibility and communication

Rapid Damage Assessment

- Conducted immediately post event.
- Provides general information to officials… How big how bad?
- Provides rough estimates and limits of damage.
- Can be accomplished through either single resources, task force, or strike team concepts.

FEMA

Detailed Damage Assessment

- May overlap in timeline with rapid damage assessment.
- Provides more extensive information.
- Inspections involve more physical presence.
- Costs are based upon more detailed estimates than rapid damage assessment.
- Helps determine actual losses
- Assists with mitigation and recovery planning.

FEMA

Re-Entry and Access Policy

- Critical part of emergency planning.
- Potential conflict between officials, citizens, and businesses.
- Necessary for public safety and security.
- Should establish who, when, where, and how long.
- Access routes and perimeter security.
- Planning can avoid conflicts between debris/public recovery and private recovery.

FEMA

Temporary Repairs vs. Reconstruction

- Does temporary work require permits?
- What is the threshold between temporary and permanent repairs?
- How will requests for exemption of code and ordinance requirements be managed?

FEMA

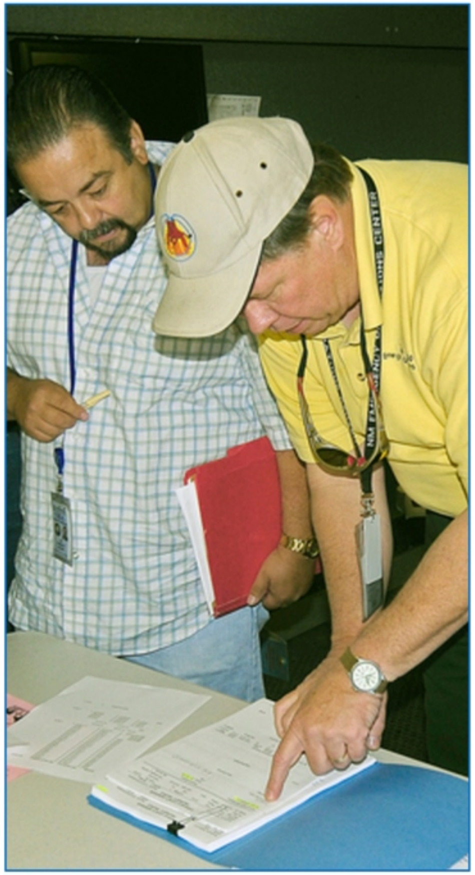
Contractor Licensing and Approvals

- Plan for the inevitable influx of contractors.
- Licensing vs. approved lists.
- Publicizing your process and protections to the public.

FEMA

Code Adequacies

The best time to review codes for currency and adequacy is BEFORE the disaster.



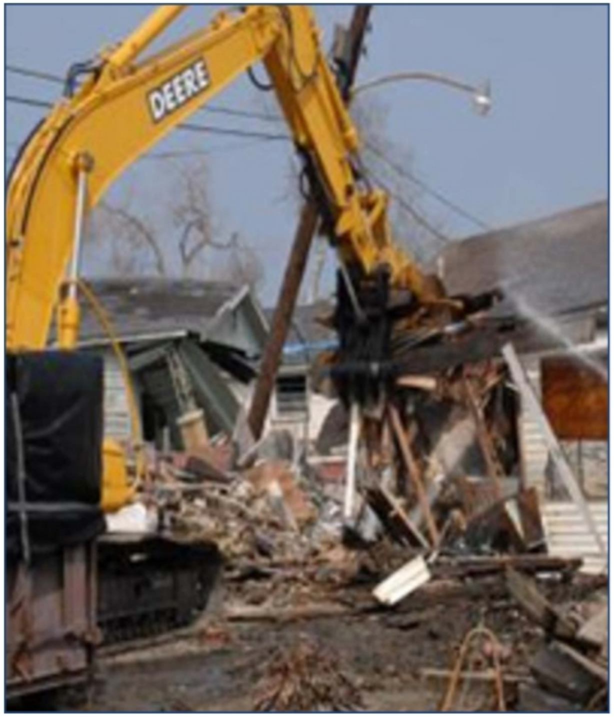
Mitigation Activities

- Information from assessments can be key component of mitigation reviews.
- Public support is often higher after an event.
- Coordination with community planning department.

FEMA

Demolition of Private & Public Properties

- Always a contentious issue.
- Authority to approve demolitions.
- Criteria to be applied:
    - Extent of damage ($ vs. %)
    - Public safety vs. community safety
    - Proper notification of property owners



FEMA

Unit Summary

Are you now able to:

- Explain the roles of local agencies for functions including housing, public works, building inspection, planning, and community development.
- Identify the six community planning tools that can assist in disaster recovery?
- Describe the challenges and opportunities related to short and long term housing issues.

Unit 6

Joplin, Missouri Case Study

Unit Objectives

Given case study information on disaster recovery in Joplin, Missouri, you will be able to:

- Identify capabilities and challenges related to implementation of disaster recovery planning efforts.
- Identify community engagement opportunities during disaster recovery.
- Identify considerations for improving your community's pre-disaster recovery capacity.

Activity 6.1: Case Study: Joplin

1 hour 30 minutes

Table Groups

Topics: Finances, Housing, COAD, CART, and Catalytic Recovery Efforts

Report Out: 3-5 minutes

FEMA

Unit Summary

Are you now able to:

- **Identify capabilities and challenges related to implementation of disaster recovery planning efforts.**
- **Identify community engagement opportunities during disaster recovery.**
- **Identify considerations for improving your community's pre-disaster recovery capacity.**

- What is your name?How long have you worked for FEMA?What area do you work in?Have you had experience working with Community Relations?What have you heard about DSA?

Purpose, DSA Mission and Essential Functions

DSA Mission Education Overview Purpose

Provide an understanding of the roles and responsibilities of HQ and the Region when DSA is activated;Facilitate program buy-in and understanding at the senior leadership level;Provide an overview of the tools and resources used by DSA Teams in the field; andProvide an opportunity for facilitated discussions and feedback.

Improving the Survivor Experience

What were some of the roles and functions of the CR cadre?What tools do you wish you had while functioning as CR?

Disaster Survivor Assistance2013 Milestones

		DSA Field Deployments
January	Based on lessons learned from Hurricane Sandy, and a desire to be more survivor-centric, FEMA Leadership decides to transfer Community Relations (CR) to the Recovery Directorate	
February	Established Disaster Survivor Initiative	
April	Transferred 741 CR Reservists from Office of External Affairs to Recovery (effective April 8)Changed the cadre name from "Community Relations" to "Disaster Survivor Assistance" (DSA)Delivered DSA Specialist Pilot Training	**4/19/2013:** EM-3363– West, Texas Explosion
May	Launched DSA Webpage Developed and tested the Survivor Mobile Application Reporting Tool (SMART) Delivered DSA Specialist Pilot Training	**5/10/2013:** DR-4116– Illinois Flooding **5/20/2013:** DR-4117– Oklahoma Tornado
June	Developed SMART Dashboard Delivered 2 DSA Specialist Courses and Train-the Trainer	**6/25/2013:** DR-2013– Alaska Ice Flow
July	Delivered Train-the-Trainer Course and 2 DSA Specialist Courses Hosted DSA Working Session to gather FEMA Leaders' feedback	
August	Delivered 3 DSA Specialist Courses and Train-the Trainer	
September	Delivered 8 DSA Specialist Training Courses	**9/14/2013:** DR-4145– Colorado Flooding
November	Hired 8 DSA IM COREs to support Regional implementation of DSA program	**11/26/2013:** DR-4157– Illinois Tornado
December	DSA Policy published Issued DSA Addendums and Revised Position Task Books Completed DSA Overview Video	

DSA Mission

Build and sustain an expeditionary cadre that can address disaster survivor's immediate needs by:Establishing a timely presence;Providing in-person, tailored information and services;Providing referrals to whole community partners as needed;Collecting targeted information to support decision-making; andIdentifying public information needs so critical messaging can be developed and disseminated.

Value-Added of DSA

- A new capability that builds on already existing resources within FEMA.Meant to complement the already existing operational structure in the field.Another options for survivors – Tele-registration, Web/Mobile Registration, Visiting DRCsProvides real-time situational awareness of unmet needs, infrastructure issues, etc.Additional surge staff to support states and local communities as neededAnother tool in the toolbox

DSA Qualifications

- Because of new mission and expanded functions, anyone deployed for DSA must complete the 5-day DSA Specialist course prior to disaster deployment.DSA Addendum/new DSA PTBs Evaluation by CA, CO or RPMSpecialty Deployment (exception to qualification requirement)

Goals for 2014

- Socialization of DSA to Regions, NPSC's, and other whole community stakeholdersFinalize DSA Staffing Implementation Plan Complete DSA Field Guide Ongoing Qualification of DSA Reservists Development and Delivery of DSA Branch Director and Crew Lead CoursesIdentify FTEs for DSA Incident Management positionsHire additional DSA IM CORE's and conduct DSA IM CORE Working SessionDeployment of DSA Readiness Kits to the Regions

DSA Steady State Roles/Responsibilities

DSA HQ/Regional Planning & Implementation

- Define FEMA HQ and Regional framework for activation of Disaster Survivor Assistance.Provide further clarification of DSA mission, roles and responsibilities. Facilitate integration with Regional planning and operations.

Steady State Roles and Responsibilities - ROC

HQ Recovery Operations and Readiness Coordination (HQ ROC): Provides oversight and management of DSA program.Provides a point of reference for DSA related questions.Provides materials/support to region for socialization within states.Drafts and updates DSA Doctrine and PolicyDevelops and delivers DSA training.Manages DSA Cadre (DSA Reservist Program Manager is included in HQ ROC)

FEMA
U.S. DEPARTMENT OF HOMELAND SECURITY

Steady State Roles and Responsibilities – Regional Recovery Directors

Regional Recovery Directors:Responsible for administration of all regional recovery programs, to include DSA.Responsible for socializing the DSA program with State and Locals, Tribal and Whole Community Partners by the end of FY14.

Demobilization

Pre-planning and Mobilization Roles and Responsibilities

- **Regional Administrators: In anticipation of or following a declaration, the Regional Administrator, Regional Recovery Director, designated IOF/JFO Operations Section Chief, and DSA Branch Director, in coordination with the FCO, will direct the activation of DSA assets to support operational needs.Recovery Division Directors: Recovery Division directors will work with the DSA Branch Director to activate DSA cadre assets and to determine resource needs for the disaster.DSA Regional Representative: Transitions to DSA Branch Director and is responsible for managing geographic or functional branches and the oversight of the DSA mission in the IOF or JFOHQ ROC: Mobilizes and deploys the DSA cadre in coordination with the Region, State and Incident Workforce Management Division. Also responsible for providing equipment for deployment teams.**

DSA Deployment - Criteria for Consideration

- Anticipated IA Declaration
- Preliminary Damage Assessment information
- Percentage of disproportionately impacted communities
- Demographic Data
- Geographic Data

DSA Deployment - Criteria for Consideration

- Power Outages/Restoration
- Road Closures
- Critical Infrastructure damage
- Number of Shelters open
- Evacuations

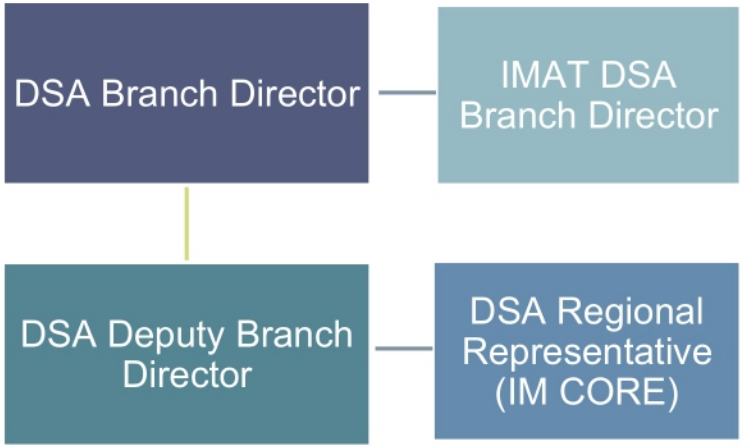
National IMAT vs. DSA Regional Representative

If National IMAT is deployed…



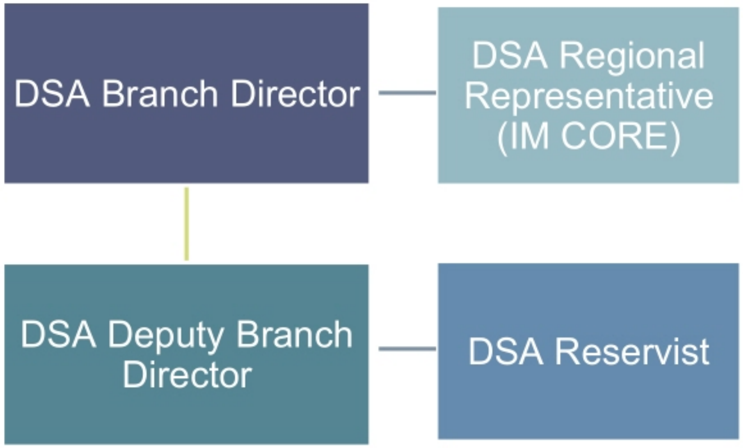
DSA Branch Director

IMAT DSA Branch Director

DSA Deputy Branch Director

DSA Regional Representative (IM CORE)

If National IMAT is not deployed…



DSA Branch Director

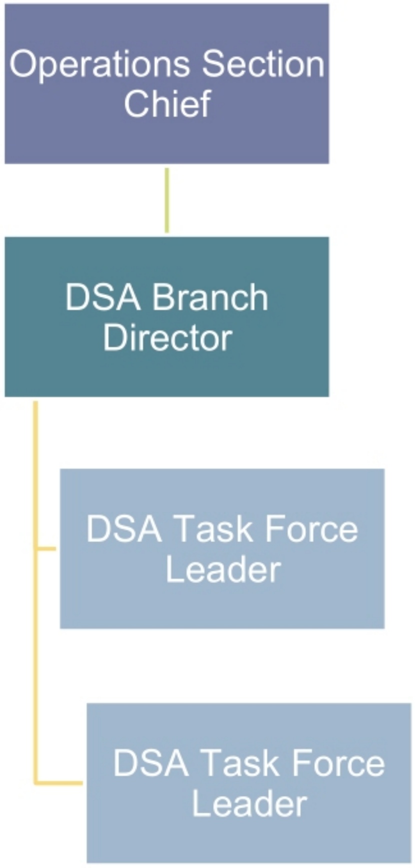
DSA Regional Representative (IM CORE)

DSA Deputy Branch Director

DSA Reservist

*** Branch Director position may be filled at the discretion of HQ ROC in some instances.

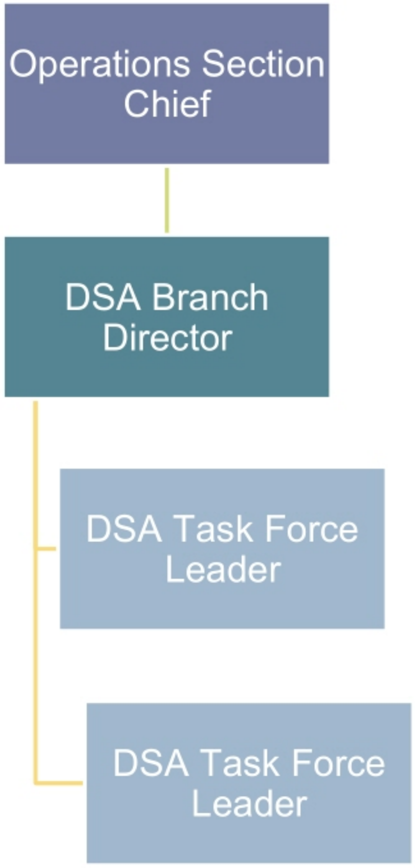
Role of the DSA Branch Director



Operations Section Chief
DSA Branch Director
DSA Task Force Leader
DSA Task Force Leader

The DSA Branch Director will:Participate in Situational Briefing from RA, FCO, SCO or OSCDeploy with Regional / National IMAT team to Interim Operating Facility (IOF) or State Emergency Operations Center (EOC) if requestedContact State/Tribal counterpart / POC to identify additional requirements of the DSA mission for the impacted communities and update the initial execution planWork with HR – IWMD Representative and FEMA HQ ROC to issue deployment orders for DSA Staff: PFTs, COREs, FEMA Corps and Reservists; and identify which NPSC Liaison will be assigned.Work with HQ ROC to request and approve NEMIS rights (NACS) for newly hired staff or surge staff DSA members who will perform applicant inquiries and updates

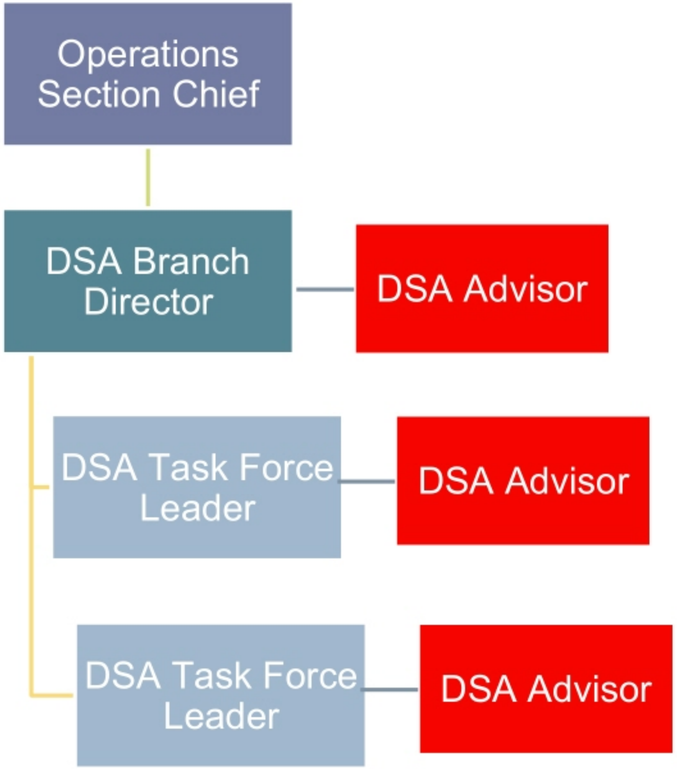
Role of the DSA Branch Director (Cont.)



Operations Section Chief
DSA Branch Director
DSA Task Force Leader
DSA Task Force Leader

The DSA Branch Director will:Work with Accountable Property Officer (APO) and IT to obtain equipment and IT support in preparation for DSA staff arrival. (see also Tablet deployment procedure)Identify potential logistical requirements (equipment and furniture) for all DSA staff in Joint Field Office (JFO) and field staff and provide to Logistics POCCoordinate with Disaster Logistics for shipment of go-kits for DSA, which includes …Coordinate with other areas, such as Ops, IA, PA, MT, LOG, EA, DIS…etc.Provide DSA input to the OSC, as requested, for initial Federal/State (F/S) meeting and agenda and Unified Command Group Meetings (UCG)

Role of the DSA Advisor

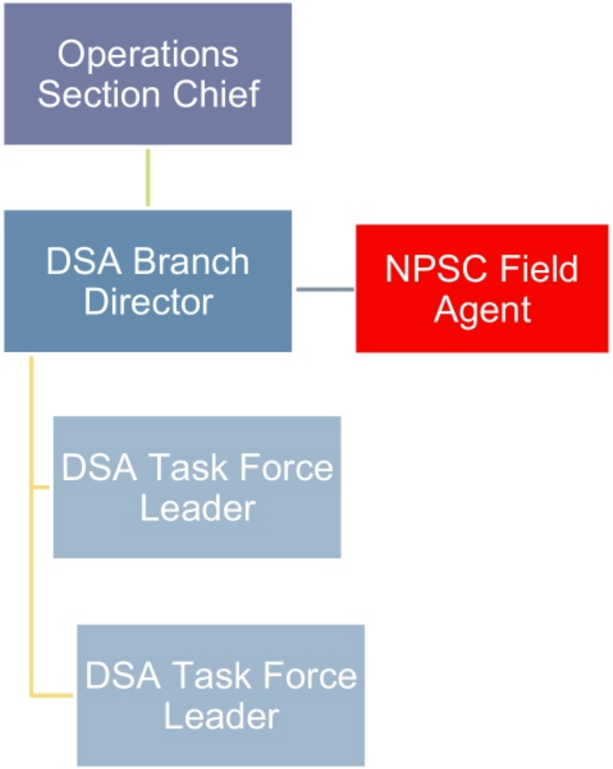


Operations Section Chief
DSA Branch Director
DSA Advisor
DSA Task Force Leader
DSA Advisor
DSA Task Force Leader
DSA Advisor

Because of the importance and variance of services DSA Crews provide to Survivors and leadership during disaster operations, DSA Advisors are needed to ensure that the mission is being executed in a proper and consistent manner.***DSA Advisors are a temporary resource; as staff becomes fully qualified in their positions, we will discontinue their use.***

Role of the NPSC Field Agent

The role of the NPSC Field Agent is to hasten the process of getting assistance to the survivor by assisting in answering NEMIS system questions that are generated by the DSA staff. This position will be located within the lowest level of the geographical field structure, e.g., Branch or Division. This position reports directly to the DSA Branch Director.



Operations Section Chief

DSA Branch Director

NPSC Field Agent

DSA Task Force Leader

DSA Task Force Leader

Deployment Metrics

Within 24 hours of IA Declaration

In coordination with Operations, the DSA Branch Director will identify the initial requirements for the DSA Mission and develop an Initial Execution Plan in conjunction with Tribe/State

Within 48 hours of IA Declaration

Deployment orders are issued to deploy DSA Crews to the affected Tribe/State

Within 4 hours of arrival

DSA Crews report to the Branch Director and are engaged supporting field operations

Mobilization (DSA Pre-Employment Center)

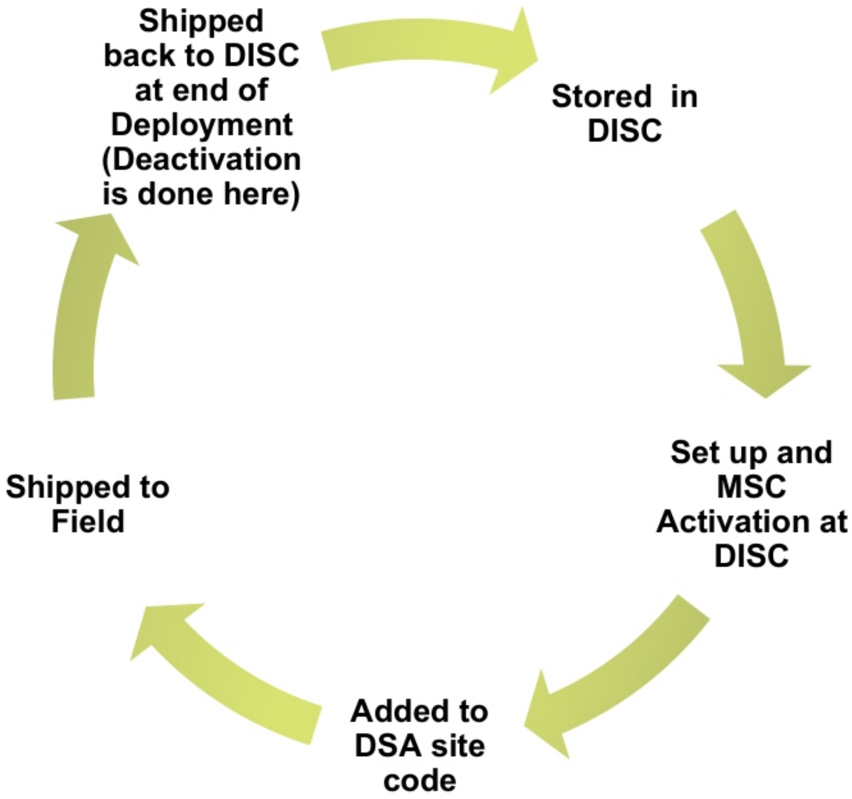
- DSA Specific Check-In and Check UpIssue Crew Assignment, Verify Contact Information, and Verify EquipmentRefresher and New Concept TrainingDSA, SMART, NEMIS, ICS, and SITREPInformation Technology (Need IT Cadre Support)Password Issues, e.g., resetsNetwork Access rightsEquipment (Need Regional APO Support)New Issue and ReplacementVehicle Kits

Equipment and Supplies

- Based on situation, e.g., cold weather, there may be a need to make a local request for equipment and/or supplies, An Accountable Property Officer (APO) and a Custodial Officer (CO) is needed to assist with issuing equipment.If property is “Accountable,” then the APO will have to record the property in the agency’s accountable property system and issue hand receipt to staffIf property is not “Accountable,” then the CO will take possession of property and issue manual hand receipts when necessary.

Equipment Deployment Model – Future Plans

- Agile and scalable approach to operations



Shipped back to DISC at end of Deployment (Deactivation is done here)

Stored in DISC

Set up and MSC Activation at DISC

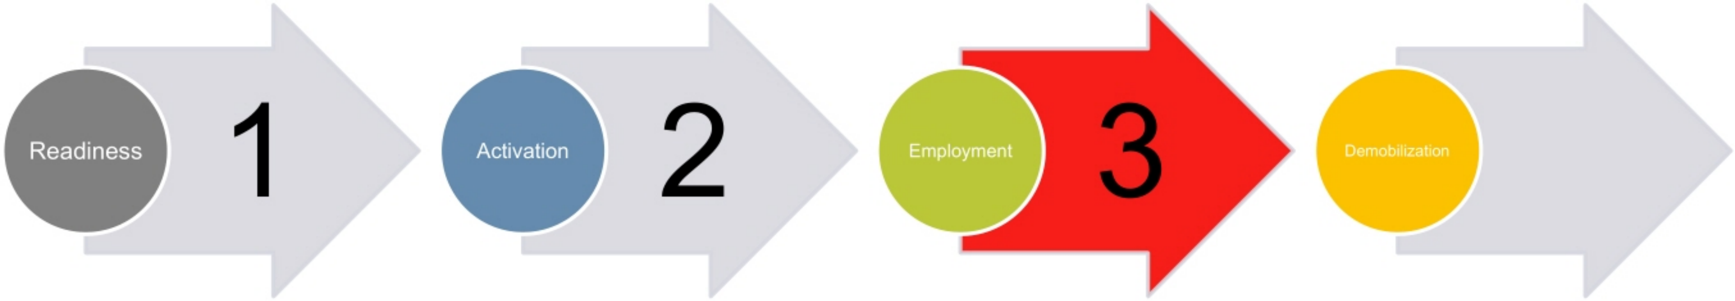
Added to DSA site code

Shipped to Field

Technology Requirements

- The Disaster Survivor Assistance cadre is designed to function in a 100% mobile environment and the concept of operations requires field teams to provide services directly to disaster survivors on site and in person. The benefits of implementing these operational requirements allow for a more agile mobile workforce that leverages technology to support survivors who need the most help.

DSA Readiness and Implementation



Readiness 1

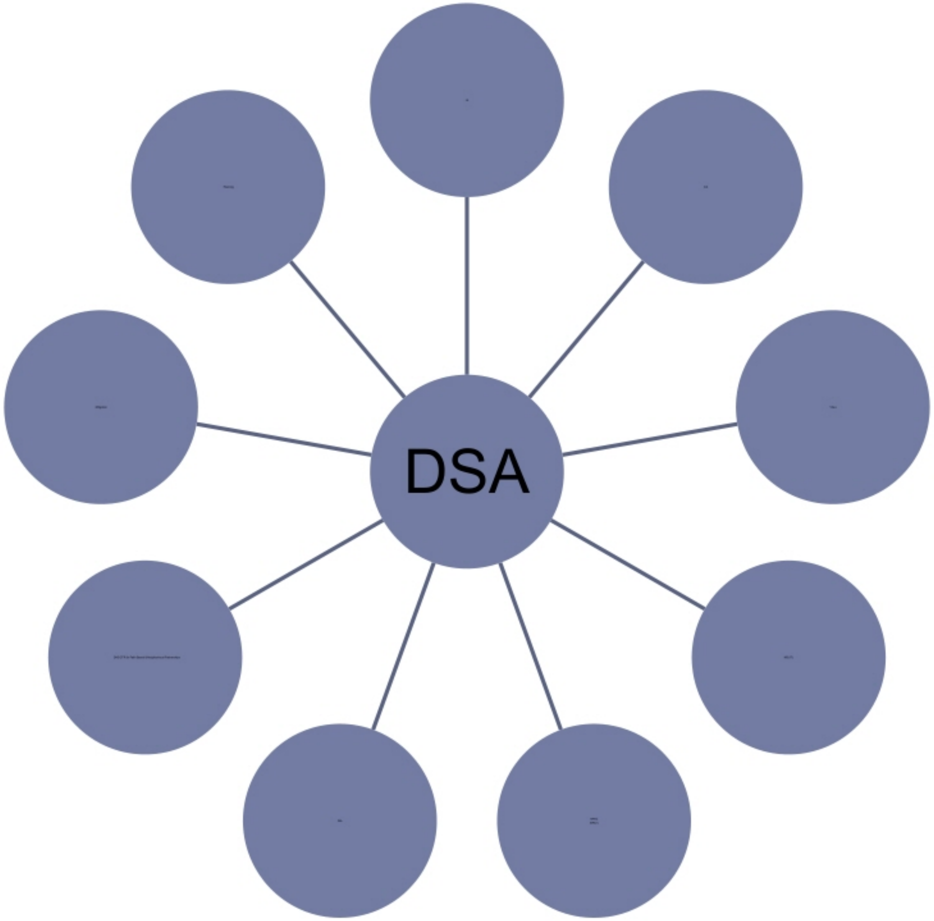
Activation 2

Employment 3

Demobilization

Internal JFO Coordination

- DSA will provide situational awareness to JFO entities that will assist with the delivery of survivor-centric services to impacted communities. Key partners include:PlanningIndividual AssistancePublic Assistance MitigationVoluntary Agency LiaisonsDisability Integration AdvisorsDHS Center for Faith Based and Neighborhood Partnerships



Stakeholder Outreach Coordination Strategies

- Integrated DSA/EA coordination strategies include:Product Approval: Disaster-specific products will be approved by ESF-15 Planning and Products.Speakers Bureau: DSA will provide support at Town Halls and other events where survivors are in attendance.LEP/ACN Outreach: Limited English Proficiency (LEP)/Access and Functional Needs (AFN) is supported through Planning and Products. As DSA Crews identify needs, they will work with their EA liaison to ensure LEP/AFN teams are aware of needs and take appropriate action.

DSA Outreach Products

- DSA members working in impacted communities will distribute pre-approved collateral materials to include:Business CardsFlyersBrochuresFact SheetsDoor HangersDisaster Assistance Publications

- ☐ DSA Policy provides an overview of the Disaster Survivor Assistance (DSA) program for FEMA employees and other whole community partners, and outlines the operational framework for DSA Crews. It outlines the DSA mission, essential functions, organization structure, and deployment and employment criteria, describes reporting protocols and communications support needed, and defines roles and responsibilities of FEMA Headquarters and Regional staff supporting the DSA program.

- ☐ Employee Assistance Programs (EAP) provide services designed to help employees, managers, and organizations meet life challenges and remain healthy, engaged, and productive.

  EAP can provide short-term counseling and referral for issues that are having an impact on your ability to work. The EAP will either address your concerns during counseling sessions, or they will refer you on to appropriate community resources, counselors, and other supports. Issues addressed by an EAP include: Life changes – divorce, new job, new baby, aging parents, grief and loss, retirement Life challenges – drug and alcohol abuse, depression, eating disorders, mental illness Job stress and burnout Coping with difficult situations or difficult people

Operational Tools

Much like the NPSC’s, IA, and PA, during disaster operations, DSA is asked to measure our impact on the mission, make staffing decisions, and develop planning assumptions.

Situational Awareness

Through SMART, we can have staff not just provide information about infrastructure damage, but a visibility on location, severity, and impact to the community.

Accountability/Coverage

SMART allows Management constant visualization of crews.

FEMA DSAT SMART Dashboard

USER INTERFACEDSA crews can drop lines on each street they cover, and embed data in the line:# of people registered# of case updates# of referralsStart & Finish times

OPERATIONS/MGMT INTERFACEOperators & DSA mgmt can assign & reassign priority levels and crews to each grid based on the needs of the disasterLevel of damagePopulation densityPopulations of need

BEHIND THE SCENESCensus, Damage Assessment, & IA registration data can be tied to each grid, so leadership can see where we are under-registered as it relates to survivor needs.

LINKING USER & MGR INTERFACESThe user interface is ArcGIS, but the data feeds a database and dashboards on the FEMA GeoPortal

Ease of use

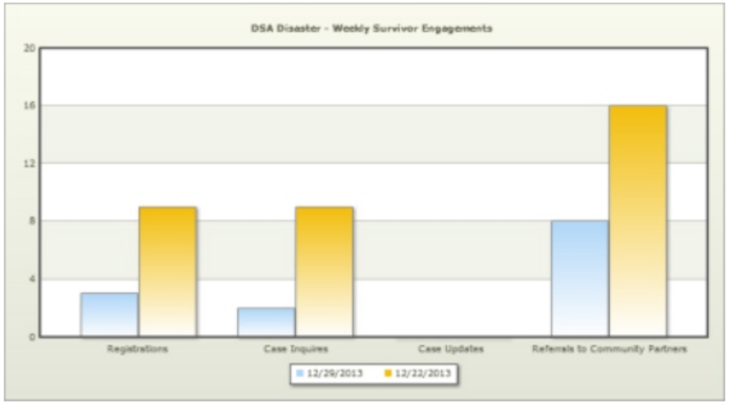
SMART was developed with the user in mind:The focus was on developing a smooth interface and user process;Leveraging a standard GIS platform which is familiar to all JFO level GIS staffEnsuring limited training time away from operational priorities

Data Sharing

- Currently SMART pulls data for an event according to the US National Grid Has ability to bring in damage assessment data, post event imagery and other mission critical dataHas capabilities to share this data across other ESFs as well as with local GIS staffSMART Dashboard and Web Map can be shared with Whole Community PartnersDSA has been careful to ensure that we are NOT collecting PII Data as SMART can be made available as a public facing page.

Reporting

- Dashboard allows the ability to run a report for all of the AIR Essential Elements of InformationCharts can be downloaded as visuals or as pure data charts.



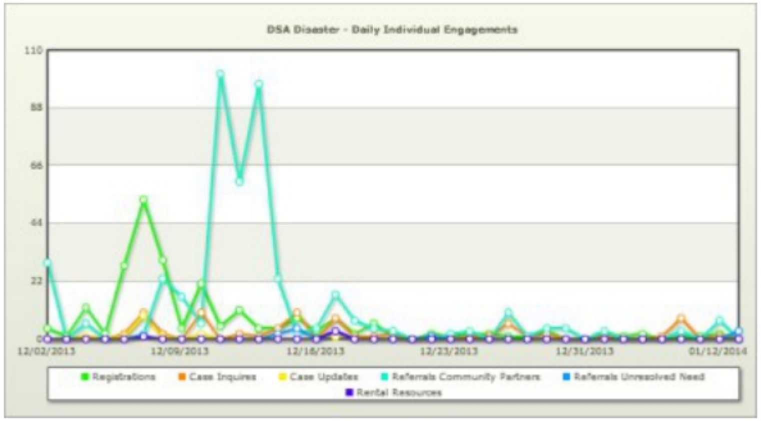
Label	12/29/2013	12/22/2013
Registrations	3	9
Case Inquires	2	9
Case Updates	0	0
Referrals to Community Partners	8	16

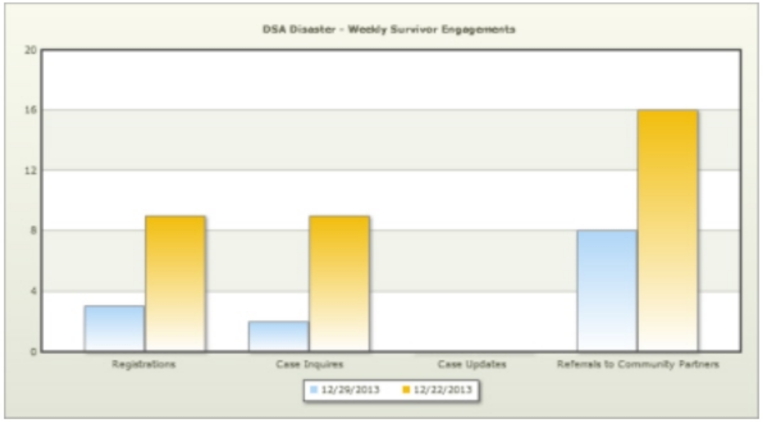
Supporting Operations

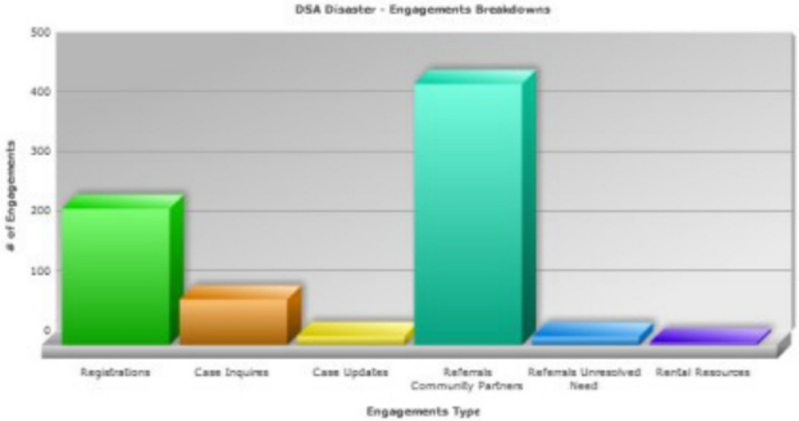
- SMART Tool can assist disaster operations with: Properly prioritize work area according to supporting dataExample: USNG automatically has population data and housing numbers according to grids

Analytics

The SMART Dashboard allows management the ability to view real time performance of crews with IA Data Points and AIR EEIs.







SMART Dashboard

Please go to the FEMA Geoportal:http://fema.maps.arcgis.com

Questions?

Unit 1:

Introduction to Recovery Concepts

FEMA

Unit Objectives

After completing this unit, you will be able to:

- **Demonstrate an understanding of the concepts of the National Disaster Recovery Framework**
- **Describe how your roles and responsibilities change as the disaster transitions from response to recovery.**
- **Define key recovery terms and concepts including the definition of disaster, Whole Community and Community Resilience**
- **Describe the difference between pre and post disaster recovery plans.**

Activity 1.1 - Your Role in Recovery

Purpose: To identify changing roles and responsibilities as the community moves from response to recovery.

Instructions: Working individually, view the “Your Role in Recovery” video and complete the following:

- Describe how your professional roles and responsibilities would change from your day-to-day operational duties to your likely roles and responsibilities during recovery from the disaster scene in the “Your Role in Recovery” video.
- Be prepared to provide a 1 minute summary to the class.

Activity Video: Your Role in Recovery

National Disaster Recovery Framework

Provides guidance on how all levels of government will work together following a disaster.

Sandy Recovery Improvement Act of 2013

January 2013 - Congress passed the Sandy Recovery Improvement Act authorizing several significant changes to the way FEMA delivers disaster assistance.

Recovery: Not Just Building Back

Historically, disaster recovery was defined as efforts to put the physical community back together again

Contemporary perspective is that disaster recovery is a “social process” encompassing decision making about restoration and reconstruction activities.

FEMA

Disaster Resilience Defined

Local resiliency with regard to disaster means that a locale is able to withstand an extreme natural event without suffering devastating losses, damage, diminished productivity, or quality of life and without a large amount of assistance from outside the community.

Dr. Dennis Mileti

Types of Recovery Plans

The American Planning Association identifies three types of recovery plans.

- **Operational (limited pre-disaster)**
- **Policy (pre-disaster)**
- **Recovery (post-disaster)**

FEMA

Policy (pre-disaster)

- Structure for managing recovery
- General policies and guidelines
- Hazard mitigation
- Adjustments in land-use policy and priorities
- Policies for funding of recovery activities.
- Identify recovery resources

Focus on issues that communities will face regardless of the specific pattern of destruction a disaster may cause.

FEMA

Recovery (post-disaster)

- Developed after disaster has occurred to deal directly with the known consequences.
- The distinguishing feature of post-disaster plans is not only the timing of their preparation, but their orientation toward physical planning and urban design.

Activity 1.2: review of Pre-and Post-Disaster Recovery Plans

Hillsborough County
Florida

Countywide
Post-Disaster
Redevelopment Plan

POST-DISASTER REDEVELOPMENT PLAN

Building Back for a Stronger Tomorrow

FEMA

Activity 1.2 - Review of Pre-and Post-Disaster Recovery Plans

- **Purpose: Assess the differences between pre and post-disaster recovery Plans and identify the benefits of each.**
- **Instructions:**
  Table groups have 2 plans, a pre-disaster and post-disaster. You will have 30 minutes to compare and contrast the two plans. Select a spokesperson to provide 5 minute summation to the class.

Unit Summary

In this unit you have learned about:

- The National Disaster Recovery Framework
- Key recovery planning terminology and concepts including Whole Community and Community Resilience
- The differences between pre- and post-disaster recovery plans.

FEMA

Unit 2:

Recovery Pre-disaster Planning Guidance for Local Governments

Unit Objectives

After completing this unit, you will be able to:

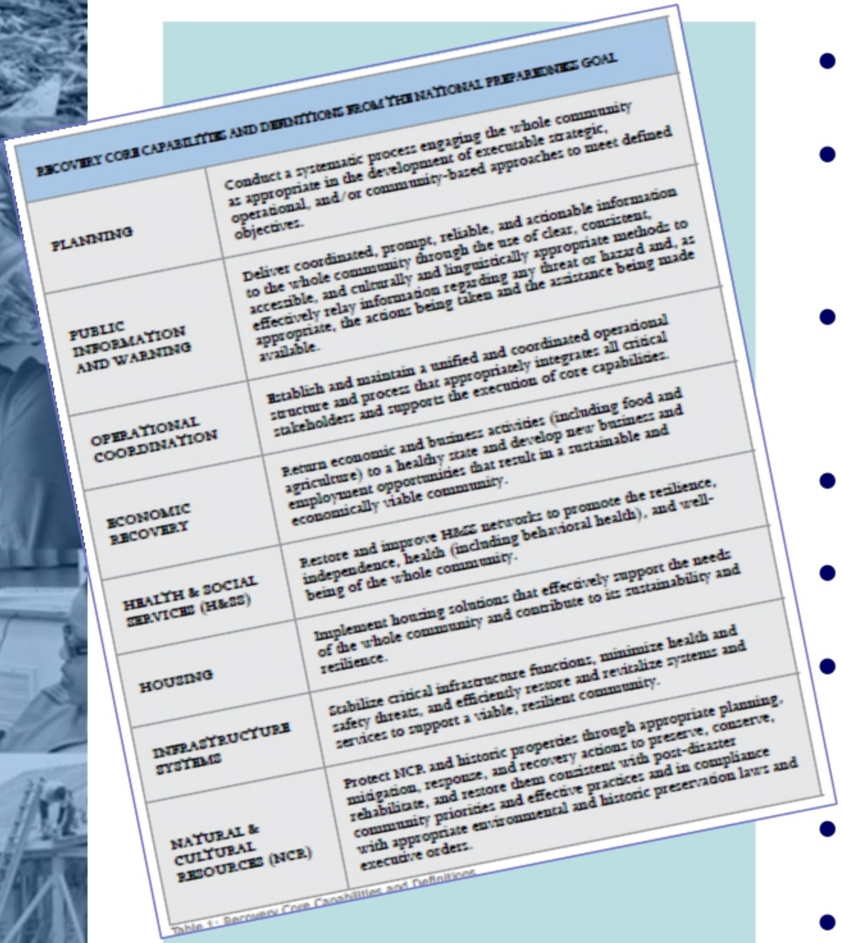
- **Define the nine key activities of pre-disaster recovery plan development.**
- **Describe the nine key steps of developing a recovery plan using established pre-disaster recovery planning guidance.**
- **Analyze a pre-disaster recovery plan using the guidance documents provided.**

RPPG-L

Recovery Pre-Disaster Planning Guidance for Local Governments (RPPG-L)

- **Guidance to local governments and community leaders on the pre-disaster recovery planning process**

Recovery Core Capabilities



RECOVERY CORE CAPABILITIES AND DEFINITIONS FROM THE NATIONAL PREPAREDNESS GOAL	
PLANNING	Conduct a systematic process engaging the whole community as appropriate in the development of executable strategic, operational, and/or community-based approaches to meet defined objectives.
PUBLIC INFORMATION AND WARNING	Deliver coordinated, prompt, reliable, and actionable information to the whole community through the use of clear, consistent, accessible, and culturally and linguistically appropriate methods to effectively relay information regarding any threat or hazard and, as appropriate, the actions being taken and the assistance being made available.
OPERATIONAL COORDINATION	Establish and maintain a unified and coordinated operational structure and process that appropriately integrates all critical stakeholders and supports the execution of core capabilities.
ECONOMIC RECOVERY	Return economic and business activities (including food and agriculture) to a healthy state and develop new business and employment opportunities that result in a sustainable and economically viable community.
HEALTH & SOCIAL SERVICES (H&SS)	Restore and improve H&SS networks to promote the resilience, independence, health (including behavioral health), and well-being of the whole community.
HOUSING	Implement housing solutions that effectively support the needs of the whole community and contribute to its sustainability and resilience.
INFRASTRUCTURE SYSTEMS	Stabilize critical infrastructure functions, minimize health and safety threats, and efficiently restore and revitalize systems and services to support a viable, resilient community.
NATURAL & CULTURAL RESOURCES (NCR)	Protect NCR and historic properties through appropriate planning, mitigation, response, and recovery actions to preserve, conserve, rehabilitate, and restore them consistent with post-disaster community priorities and effective practices and in compliance with appropriate environmental and historic preservation laws and executive orders.

Community Recovery Management Toolkit

Community Recovery Management Toolkit is a compilation of guidance, case studies, tools, and training to assist local communities in managing long-term recovery following a disaster. The materials provided in this toolkit are aimed at providing guidance and resources to help local officials and community leaders to lead, organize, plan for, and manage the complex issues of post-disaster recovery.

Resources for Local Leaders of Recovery

The Community Planning and Capacity Building Recovery Support Function (CPCB RSF) coordinates among its partners to identify resources to assist local communities in recovery efforts. The Community Recovery Management Toolkit provides resources to support a variety of activities that communities will undertake during long-term recovery.

FLORIDA DEPARTMENT OF COMMUNITY AFFAIRS | FLORIDA DIVISION OF EMERGENCY MANAGEMENT

"Rebuilding a community after a major or catastrophic disaster is a huge undertaking. The most effective way to accomplish holistic post-disaster redevelopment is to be prepared before a disaster strikes."

FEMA

Unit Summary

In this unit, you have learned how to:

- Define the nine key activities of pre-disaster recovery plan development.
- Describe the nine key steps of developing a recovery plan using established pre-disaster recovery planning guidance.
- Analyze a pre-disaster recovery plan using the guidance documents provided.

Procurements under FEMA Awards

Requirements for Recipients and Subrecipients When Procuring Services and Supplies with Funding under Stafford Act Grant Programs

FEMA Procurement Disaster Assistance Team (PDAT)
April 2016

FEMA

FEMA Procurement Disaster Assistance Team (PDAT)

- PDAT was stood up by the FEMA Office of Chief Counsel in April, 2014 to assist and train FEMA personnel and applicants on the procurement rules that applicants must follow when contracting for work using federal disaster grant funds under the Public Assistance (PA) program.
- A large part of PDAT's mission is giving these presentations to applicants and FEMA personnel. We don't expect you to be experts after this presentation but at least you will get an idea of the basic concepts and issues. We will also provide a copy of the slides after the presentation.

FEMA Procurement Disaster Assistance Team (PDAT)

- We also assist applicants through FEMA PA personnel. We get issues and questions through them and then answer through them as we are not an applicant's legal advisor. We've advised PA Personnel who are assisting applicants on dozens of contract issues already.
- We sometimes deploy to a JFO to provide support to applicants through their PAC or other FEMA representative.
- Please go to:

https://www.fema.gov/media-library/assets/documents/96773

FEMA

Why We are All Here

- DHS OIG audits of FEMA disaster grants in Fiscal Year 2014
  - Resulted in 32 recommendations related to recipient (grantee) and subrecipient (subgrantee) failures to adhere to the federal procurement standards
  - OIG recommended up to $61,654,399 in disallowed costs
- Common findings:
  - Noncompetitive contracting practices
  - Failure to include required contract provisions
  - Failure to employ required procedures to ensure small/minority/women-owned firms are used
  - Cost-plus-percentage-of-cost contracting
- Noncompliance with the federal procurement requirements may comprise a material failure to comply with the terms of the disaster grant award and violate the FEMA-State Agreement

Purpose and Scope

- This presentation provides an overview of the procurement standards imposed by federal regulations on recipients and subrecipients when procuring services and property with funding from any of the Stafford Act grant programs
- The focus of this presentation is the new procurement standards under the *Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards* ("*Uniform Rules*"), which are codified at 2 C.F.R. §§ 200.317 through 200.326, which supersedes the procurement regulations formerly found at 44 C.F.R. pt. 13 (State, Local, and Tribal Governments), and 2 C.F.R. pt. 215 (Private Nonprofit Organizations)
- This presentation does not address other requirements imposed by federal law, executive orders, and other regulations on non-Federal entity procurements

Rules of the Road

- Please ask questions as they arise during the presentation—there is no need to wait until the end to ask them
- This presentation (including the slides and any oral information conveyed) provides general information about the procurement requirements applicable to Stafford Act grants and is not intended to be, nor should it be considered as legal advice
  - For example, some slides may omit or only summarize certain requirements set forth in the regulations
  - You should not act or rely on information contained in our presentation (written or oral) without seeking the advice of your own attorney

Agenda

- Background
- Terminology and Key Players
- Procurement Standards for States
- Procurement Standards for Other Non-Federal Entities
- Differences between the New and Old Procurement Standards

FEMA

Stafford Act Grant Programs

- The Robert T. Stafford Disaster Relief and Emergency Assistance Act ("Stafford Act") authorizes federal financial assistance for states, local and Indian tribal governments, and certain private nonprofit organizations to respond to and recover from emergencies and major disasters
- FEMA administers this financial assistance through various Stafford Act grant programs
- One such grant program is the Public Assistance Grant Program, which provides financial assistance for debris removal and emergency protective measures (known as "emergency work") and permanent restoration of damaged facilities (known as "permanent work")

Uniform Rules Applicability

- DHS adopted the Uniform Rules on December 19, 2014, in an Interim Rule (79 Fed. Reg. 75871)
  - The Uniform Rules apply to all new grant awards under emergencies and major disasters declared on or after December 26, 2014 (79 Fed. Reg. at 75872 and § 200.110)
- The Uniform Rules, where applicable, supersede the procurement standards formerly found at 44 C.F.R. § 13.36 (applicable to states, local, and Indian tribal governments) and 2 C.F.R. pt. 215 (applicable to institutions of higher education, hospitals, and private nonprofit organizations)
- But there is a "grace period" for procurement standards

“Grace Period” for Procurement

- The Uniform Rules at 2 C.F.R. § 200.110 provide that:

  Federal awarding agencies must implement the policies and procedures applicable to Federal awards by promulgating a regulation to be effective by December 26, 2014 unless different provisions are required by statute or approved by OMB. **For the procurement standards in §§ 200.317–200.326, non-Federal entities may continue to comply with the procurement standards in previous OMB guidance (superseded by this part as described in § 200.104) for two additional fiscal years after this part goes into effect**. If a non-Federal entity chooses to use the previous procurement standards during the grace period before adopting the procurement standards in this part, the non-Federal entity must document this decision in its internal procurement policies.

FEMA

Contracting in Assistance Projects

- A non-Federal entity will often use contractors to help them carry out their Stafford Act awards or subawards
  - A non-Federal entity may receive a Public Assistance award to restore a damaged building, and will then award a contract to a construction company to do the work
  - The contract is a commercial transaction between the non-Federal entity and its contractor, and FEMA has no privity of contract with the contractor
- Although the federal government is not a party to the contract, the non-Federal entity must comply with the conditions attached to a grant in awarding federally-assisted contracts
  - A non-Federal entity must comply with the procurement requirements imposed by federal law, executive orders, and federal regulations
  - These will control over non-Federal authorities (such as local procurement standards) to the extent they conflict with federal requirements

Contracting

- The Uniform Rules set forth various procurements standards at 2 C.F.R. §§ 200.317 through 326
- Before the Uniform Rules:
  - State, local, and Indian tribal government procurement standards were set forth at 44 C.F.R. § 13.36
  - Institutions of higher education, hospitals, and other nonprofit organization procurement standards were set forth at 2 C.F.R. §§ 215.40 through 48
  - The procurement standards were similar, but not identical, for different organizations under the old regime
- The purpose of the procurement standards is not just to obtain the cheapest price for the particular service or good, but also includes the furtherance of other objectives

FEMA

DHS OIG Audit Results – 2014

- DHS OIG audits of FEMA disaster grants in Fiscal Year 2014
  - Resulted in 32 recommendations related to recipient (grantee) and subrecipient (subgrantee) failures to adhere to the federal procurement standards
  - OIG recommended up to $61,654,399 in disallowed costs
- Common findings:
  - Noncompetitive contracting practices
  - Failure to include required contract provisions
  - Failure to employ required procedures to ensure small/minority/women-owned firms are used
  - Cost-plus-percentage-of-cost contracting
- Noncompliance with the federal procurement requirements may comprise a material failure to comply with the terms of the disaster grant award and violate the FEMA-State Agreement

FEMA

Consequences of Noncompliance

- FEMA may take any number of enforcement remedies in the case of a noncompliant procurement under a Stafford Act grant (2 C.F.R. § 200.338)
  - (a) Temporarily withhold cash payments pending correction of the deficiency by the non-Federal entity or more severe enforcement action by the Federal awarding agency or pass-through entity
  - (b) Disallow (that is, deny both use of funds and any applicable matching credit for) all or part of the cost of the activity or action not in compliance
  - (c) Wholly or partly suspend or terminate the Federal award
  - (d) Initiate suspension or debarment proceedings (or in the case of a pass-through entity, recommend such a proceeding be initiated by a Federal awarding agency
  - (e) Withhold further awards for the program
  - (f) Take other remedies that may be legally available

Agenda

- Background
- Terminology and Key Players
- Procurement Standards for States
- Procurement Standards for Other Non-Federal Entities
- Differences between the New and Old Procurement Standards

FEMA

Terminology

- "***Non-Federal entity***" means a state, local government, Indian tribe, institution of higher education, or nonprofit organization that carries out a Federal award as a recipient or subrecipient (2 C.F.R. § 200.69)
- "***Federal award***" means, among other things, the Federal financial assistance that a non-Federal entity receives directly from a Federal awarding agency or indirectly through a pass-through entity (2 C.F.R. § 200.38); it also means the instrument setting forth the terms and conditions
- "***Recipient***" means a non-Federal entity that receives a Federal award directly from a Federal awarding agency to carry out an activity under a Federal program (2 C.F.R. § 200.86)

FEMA

Terminology

- "***Pass-through entity***" means a non-Federal entity that provides a subaward to a subrecipient to carry out part of a Federal program (2 C.F.R. § 200.74)
- "***Subaward***" means an award provided by a pass-through entity to a subrecipient for the subrecipient to carry out part of a Federal award received by the pass-through entity; it does not include payments to a contractor (2 C.F.R. § 200.92)
- "***Subrecipient***" means a non-Federal entity that receives a subaward from a pass-through entity to carry out part of a Federal program: but does not include an individual that is a beneficiary of such program (2 C.F.R. § 200.93)

FEMA

The Key Players – Recipient

- The recipient is the Federal award administrator for all funds provided under the Public Assistance Program and responsible for ensuring compliance with all applicable federal laws, regulations, executive orders, FEMA policies, the FEMA-State Agreement, and other terms and conditions
- The recipient must comply with the applicable procurement standards for all recipient procurements
- The recipient, as a pass-through entity, is responsible for:
  - Processing subawards to subrecipients
  - Adhering to the federal procurement standards for recipient procurements, which is 2 C.F.R. § 200.317 for a state
  - Ensuring subrecipient awareness of, and compliance with Federal procurement standards for subrecipient procurements
  - Ensuring compliance with the FEMA-State Agreement

The Key Players – Subrecipient

- The subrecipient means the non-Federal entity that receives a subaward from a pass-through entity to carry out part of a Federal program, and which is accountable to the recipient or pass-through entity for the use of the funds provided (2 C.F.R. § 200.93). Includes:
  - Local and Tribal Indian Governments; and
  - IHE, Hospitals, and other Nonprofit Organizations
- The subrecipient must adhere to the federal procurement standards, which are found at 2 C.F.R. § § 200.318-326.
- Formerly used the term “subgrantee.”
- Indian Tribal governments follow the procedures at 2 C.F.R. § § 200.318-326, irrespective of whether they are a recipient or subrecipient.

FEMA

The Key Players – FEMA and OIG

- FEMA is the federal awarding agency
  - Has an affirmative duty to manage and administer the Federal award in a manner to ensure that Federal funding is expended for authorized purposes and in accordance with all federal laws, regulations, and executive orders and the terms of the grant award
  - Educate and inform grantees about various grant requirements
  - Recovers funding for improper expenditures under a grant
- DHS Office of Inspector General ("OIG")
  - Conducts independent audits, investigations, and inspections of the programs and operations of DHS and makes recommendations
  - The DHS OIG has broad authority to audit FEMA programs and activities

FEMA

Summary of Procurement Standards

State	**Other Non-Federal Entities (local governments, tribal governments, IHE, hospitals, and other nonprofit organizations)**
2 C.F.R. § 200.317	2 C.F.R. §§ 200.318 through 326
Synopsis: Must follow same policies and procedures it uses for procurements from its non-Federal funds, comply with 200.322 (procurement of recovered materials), and ensure that every purchase order or other contract includes any clauses required by 200.326 (contract provisions)	Synopsis: Must follow its own documented procurement procedures which reflect applicable state, local, and tribal laws and regulations, provided that the procurements conform to applicable federal law and the standards identified in 2 C.F.R. §§ 200.318 through 326
Note: The recipient and subrecipient must comply with all applicable federal laws, regulations, and executive orders	

FEMA

Procurement Standard for States

- The regulation at 2 C.F.R. § 200.317 sets forth the procurement standard applicable to a state:
  - Must follow the same policies and procedures it uses for procurements from its non-Federal funds
  - Will comply with 2 C.F.R. § 200.322 (Procurement of Recovered Materials)
  - Must ensure that every purchase order or other contract includes any clauses required by 2 C.F.R. § 200.326 (Contract Provisions)
- The Uniform Rules do not define an Indian tribe as a state, such that an Indian tribe must follow the procurement standards at 2 C.F.R. §§ 200.318-326 irrespective of whether it is a recipient or subrecipient

Hypothetical

The federal procurement standard at 2 C.F.R. § 200.320(b) allows small purchase procedures for the acquisition of supplies or services below the simplified acquisition threshold (which is currently $150,000). The State of X has a threshold of $175,000 in its own version of small purchase procedures, and uses its own threshold and small purchase procedures to procure $170,000 in supplies.

Is there an issue with the State's procurement?

Agenda

- Background
- Terminology and Key Players
- Procurement Standards for States
- Procurement Standards for Other Non-Federal Entities
- Differences between the New and Old Procurement Standards

FEMA

Summary of Procurement Standards

State	**Other Non-Federal Entities (local governments, tribal governments, IHE, hospitals, and other nonprofit organizations)**
2 C.F.R. § 200.317	2 C.F.R. §§ 200.318 through 326
Synopsis: Must follow same policies and procedures it uses for procurements from its non-Federal funds, comply with 200.322 (procurement of recovered materials), and ensure that every purchase order or other contract includes any clauses required by 200.326 (contract provisions)	Synopsis: Must follow their own documented procurement procedures which reflect applicable state, local, and tribal laws and regulations, provided that the procurements conform to applicable federal law and the standards identified in 2 C.F.R. §§ 200.318 through 326
Note: The recipient and subrecipient must comply with all applicable federal laws, regulations, and executive orders	

FEMA

Other Non-Federal Entities

- All other non-Federal entities, to include Indian tribes (whether a recipient or subrecipient), follow their own documented procurement procedures which reflect applicable state, local, and tribal laws and regulations, provided that the procurements conform to applicable federal law and the standards identified in 2 C.F.R. §§ 200.318 through 326
- A non-Federal entity’s procurement may meet the requirements of applicable state, local, and tribal procurement laws and regulations, but not meet the Federal procurement standards set forth in 2 C.F.R. §§ 200.318 through 326—such a procurement would not be compliant with the Uniform Rules
- This means that institutions of higher education, hospitals, and other private nonprofit organizations now follow the same procurement standards as local and tribal governments

Hypothetical

The federal procurement standard at 2 C.F.R. § 200.320(b) allows small purchase procedures for the acquisition of supplies or services below the simplified acquisition threshold (which is currently $150,000). The State of X has a threshold of $175,000 in its own version of small purchase procedures. The City of Y uses the State's threshold and uses small purchase procedures to procure $170,000 in supplies.

Is there an issue with the City's procurement?

Overview of Standards

- The procurement standards can be broken down into the following categories:
  - General procurement standards (2 C.F.R. § 200.318)
  - Competition (2 C.F.R. § 200.319)
  - Methods of procurement (2 C.F.R. § 200.320)
  - Contracting with small and minority businesses, women's business enterprises, and labor surplus area firms (2 C.F.R. § 200.321)
  - Procurement of recovered materials (2 C.F.R. § 200.322)
  - Contract cost and price (2 C.F.R. § 200.323)
  - Awarding agency and pass-through entity review (2 C.F.R. § 200.324)
  - Bonding requirements (2 C.F.R. § 200.325)
  - Contract provisions (2 C.F.R. § 200.326 and Appendix II)

General Procurement Standards

- The regulation at 2 C.F.R. § 200.318 identifies eleven general procurement standards, some of which are mandatory and others encouraged
- Contractor Oversight – A non-Federal entity must maintain oversight to ensure that contractors perform in accordance with the terms, conditions, and specifications of their contracts or purchase orders (2 C.F.R. § 200.318(b))
- Necessity – A non-Federal entity must have procedures that avoid acquisition of unnecessary or duplicative supplies or services, and consideration should be given to breaking out procurements to obtain a more economical purchase (2 C.F.R. § 200.318(d))

General Procurement Standards

- Standards of Conduct: Must maintain written standards of conduct covering conflicts of interest and governing the performance of employees engaged in the selection, award, and administration of contracts (2 C.F.R. § 200.318(c))
  - These standards must provide for disciplinary actions
  - Must cover "organizational conflicts of interest" if the non-Federal entity has a non-governmental parent, subsidiary, or affiliate (new)
- Conflict of Interest – No employee, officer, or agent must participate in the selection, award, or administration of a contract supported by a Federal award if he or she has a real ***or*** apparent conflict of interest
- Gifts – The officers, employees, and agents of the non-Federal entity must neither solicit nor accept gratuities, favors, or anything else of monetary value from contractors/subcontractors

FEMA

Hypothetical

A local government is procuring construction services for the repair of its town hall damaged in a major disaster. Using procurement through sealed bids, the local government receives twelve bids. The head of the contracting board, who makes the final award decision, is the brother of the President of the company that submitted the lowest bid.

Should the head of the contracting board participate in the award decision?

General Procurement Standards

- Awards to Responsible Contractors: A non-Federal entity must award contracts only to ***responsible*** contractors possessing the ability to perform successfully under the terms and conditions of a proposed procurement, and will give consideration to such matters as: (2 C.F.R. § 200.318(h))
  - Contractor integrity
  - Compliance with public policy
  - Record of past performance
  - Financial and technical resources
- Records: A non-Federal entity must maintain records sufficient to detail the history of the procurement, which must include, but are not limited to, rationale for the method of procurement; selection of contract type; contractor selection; and the basis for the contract price (2 C.F.R. § 200.318(i))

General Procurement Standards

- Time and Materials Contract (2 C.F.R. § 200.318(j))
  - A non-Federal entity may use time and materials (T&M) contracts only after a determination that no other contract is suitable and the contract includes a ceiling price that the contractor exceeds at its own risk
  - A time and materials type contract means a contract whose cost to a non-Federal entity is the sum of: (1) the actual cost of materials; and (2) direct labor hours charged at fixed hourly rates that reflect wages, general and administrative expenses, and profit
- Settlement of Issues – A non-Federal entity alone must be responsible, in accordance with good administrative practice and sound business judgment, for the settlement of all contractual issues (2 C.F.R. § 200.318(k)) (change)
- The Uniform Rules also "encourages" various standards (use of federal excess property, intergovernmental agreements, and value engineering) (2 C.F.R. § 200.318(e), (f), and (g))

Competition

- A non-Federal entity must conduct procurement transactions in a manner providing “full and open competition” consistent with the standards of 2 C.F.R. § 200.319
- Contractors that develop or draft specifications, requirements, statements of work, or invitations for bids or requests for proposals must be excluded from participating for such procurements (new)
- A non-Federal entity must conduct procurements in a manner that ***prohibits*** the use of statutorily or administratively imposed state, local, or tribal geographical preferences in the evaluation of bids or proposals, except where federal law expressly mandates or encourages geographic preference
- A non-Federal entity may use pre-qualified lists of persons, firms, or products, subject to certain conditions

Competition

- The regulation identifies seven situations considered to be restrictive of competition (2 C.F.R. § 200.319(a)(1)-(7))
  - Noncompetitive pricing practices
  - Noncompetitive contracts to consultants on retainer
  - Organizational conflicts of interest
- A non-Federal entity must have written procedures for procurement transactions, which must ensure the solicitations provide for at least the following (2 C.F.R. § 200.319(c))
  - Incorporate a clear and accurate description of the technical requirements for the material product, or service procured
  - Identify all requirements which the offerors must fulfill and all other factors to be used in evaluating bids or proposals

Hypothetical

Pre-Qualified Lists – City, after publicly advertising a request for qualifications, pre-qualifies three debris removal contractors for potential use during a future event. Later that same year, a category 5 hurricane impacts the State of Z, causing widespread damage and debris. Knowing debris removal will continue for approximately six months, the City uses the procurement by sealed bids method among the three contractors to meet the debris removal requirement. Contractor, who is not among the list of three, contacts the City during the solicitation period and wants to submit a request for qualifications and subsequent bid. The City denies this request during the solicitation period.

Does such a denial comport with 2 C.F.R. § 200.319(d)?

Procurement Methods

- Micro-Purchase Procedures (2 C.F.R. § 200.320(a)) (new)
  - The acquisition of supplies or services, the aggregate dollar amount of which does not exceed the micro-purchase threshold - $ 3500
  - To the extent practicable, must distribute micro-purchases equitably among qualified suppliers
  - May be awarded without soliciting competitive quotations if the non-Federal entity considers the price to be reasonable
- Small Purchase Procedures (2 C.F.R. § 200.320(b))
  - Are those relatively simple and informal procurement methods for securing services, supplies, or other property that does not cost more than the simplified acquisition threshold - $ 150,000
  - Price or rate quotations are to be obtained from an “adequate number” of qualified sources

Procurement Methods

- Sealed Bidding (2 C.F.R. § 200.320(c))
  - Bids are publicly solicited and a firm fixed price contract (lump sum or unit price) is awarded to the "responsible" bidder whose bid, conforming with all the material terms and conditions of the invitation for bids (IFB), is the lowest in price
  - Bids must be solicited from an "adequate number of known suppliers," providing them sufficient response time before date for the opening of bids
  - Local and tribal governments must publicly advertise the invitation for bids (change)
  - All bids will be opened at the time and place prescribed in the invitation for bids, and for local and tribal governments, the bids must be opened publicly (change)
  - This method is "preferred" for construction when sealed bidding is "feasible," which is when certain conditions are present
  - Other procedural requirements at 2 C.F.R. § 200.320(c)(2)

Procurement Methods

- Competitive Proposals (2 C.F.R. § 200.320(d))
  - Competitive proposals are generally used when conditions are not appropriate for the use of sealed bids
  - The appropriate method when more than one source is expected to submit an offer and either a fixed-price or cost-reimbursement type contract is awarded
  - Requests for proposals **must be publicized** and identify all evaluation factors and their relative importance
  - Proposals must be solicited from an adequate number of qualified sources
  - Must have written method for conducting technical evaluations of the proposals received and for selection of the contractor
  - Awards will be made to the responsible firm whose proposal is most advantageous to the program, with **price** and other factors considered

Procurement Methods

- Noncompetitive Proposals (2 C.F.R. § 200.320(f)) (change)
  - Procurement through solicitation of a proposal from only one source and may be used only when one or more of the following circumstances apply
  - **One Source**: The item is available only from a single source
  - **Exigency/Emergency**: An exigency or emergency will not permit a delay resulting from competitive solicitation
  - **Awarding Agency Approval**: The Federal awarding agency or pass-through entity expressly authorizes noncompetitive proposals in response to a written request from the non-Federal entity
  - **Inadequate Competition**: After the solicitation of a number of sources, competition is determined inadequate
- The award of a contract no longer has to be "infeasible" under one of the competitive methods of procurement (which was another condition precedent under 44 C.F.R. § 13.36(d)(4))

FEMA

Procurement Methods – Case Study

- Severe storms, flooding, and landslides impact the State of Z during the period February 20 through April 2. The impacts of the storm necessitated road repairs.
- City X Agency invited four specific contractors—with whom they were familiar—to bid on the roadwork repairs, and awarded a contract for $4.2 million to the lowest bidder among the four
- City X issued a notice to proceed with the work on January 8 (nine months after the disaster), and the contractor completed the project in December
- City X asserts that the City Procurement Manager approved the contract under emergency procurement procedures

Procurement Methods – Case Study

- OIG recommended a disallowance of the contract costs of $4.2 million based, in part, on the following findings:
  - The applicant circumvented full and open competition by inviting only the four contractors to bid on roadwork repairs
  - The work commenced nine months after the declaration, and the work itself was more long term in nature and not emergency-oriented
- OIG stated that it did not believe it was prudent to waive federal procurement standards unless lives and property are at risk
  - The goals of proper contracting relate to more than just reasonable costs
  - Once the roads are clear, power is restored, and the danger is over, cities, counties, and other entities should follow federal regulations or risk losing federal funding

Socioeconomic Contracting

- A non-Federal entity must take all necessary affirmative steps to assure that minority businesses, women's business enterprises, and labor surplus area firms are used when possible (2 C.F.R. § 200.321)
- The affirmative steps must include at least the following:
  - Placing qualified small and minority businesses and women's business enterprises on solicitation lists
  - Assuring that small and minority businesses, and women's business enterprises are solicited whenever they are potential sources
  - Dividing total requirements, when economically feasible, into smaller tasks or quantities to permit maximum participation by small and minority businesses, and women's business enterprises
  - Establishing delivery schedules, where the requirement permits, which encourage participation by small and minority businesses, and women's business enterprises

FEMA

Socioeconomic Contracting

- The affirmative steps must include at least the following (cont.):
  - Using the services and assistance, as appropriate, of such organizations as the Small Business Administration and the Minority Business Development Agency of the Department of Commerce
  - Requiring the prime contractor, if subcontracts are to be let, to take the five previous, affirmative steps
- Failure to comply with the former, equivalent procurement standard has been a very common finding in Office of Inspector General audits

FEMA

Socioeconomic – Case Study

- A severe winter storm impacts the State of Z and coats power lines and trees with ice, and the added weight of the ice damages or destroys roughly 8000 utility poles through the Utility Cooperative's service area. This caused power outages to approximately 25,000 of the Cooperative's customers.
- After the Cooperative restored power to its customers, it used full and open competition in awarding $5.6 million in contracts for longer term work.
- However, the Cooperative did not take the required steps to assure that it used small businesses, minority-owned firms, and women's business enterprises when possible, and did not include federally required provisions in its contracts

Socioeconomic – Case Study

- OIG recommended a disallowance of $5.6 million in contract costs based, in part, on the Cooperative's failure to take specific steps to ensure the use of small businesses, minority-owned firms, and women's business enterprises whenever possible
- The Cooperative stated that it was unaware of this requirement and that all businesses had an opportunity to bid, and that it was concerned about contract cost and contractor experience rather than a contractor's business affiliation

Cost and Price

- A non-Federal entity must perform a price or cost analysis in connection with every procurement action above the simplified acquisition threshold, including contract modifications (2 C.F.R. § 200.323) (change)
- The method and degree of analysis is dependent on the facts and circumstances surrounding the particular procurement but, as a starting point, the non-Federal entity must make independent estimates before receiving bids or proposals (change)
- A non-Federal entity ***shall*** negotiate profit as a separate element of the price for each contract in which there is no price competition and in all cases where cost analysis is performed

Hypothetical

The City conducts a procurement through competitive proposals for consulting services, resulting in a cost reimbursement contract with anticipated costs of $100,000 at the time of the contract. The City has made an independent estimate of the contract cost during acquisition planning of $110,000.

Is the City required to conduct a price or cost analysis?

Cost Plus Percentage of Cost

- A non-Federal entity must not use a cost-plus-percentage-of-cost or cost-plus-percentage-of-construction-cost method of contracting (2 C.F.R. § 200.323(d))
- Criteria evidencing this type of contract
  - Payment is on a predetermined percentage rate
  - The predetermined percentage rate is applied to actual performance costs
  - The contractor's entitlement is uncertain at the time of contracting
  - The contractor's entitlement increases commensurately with increased performance costs
- Rationale: There is no incentive to control costs, and the contractor has a financial interest in *increasing* the cost of performance

Case Study

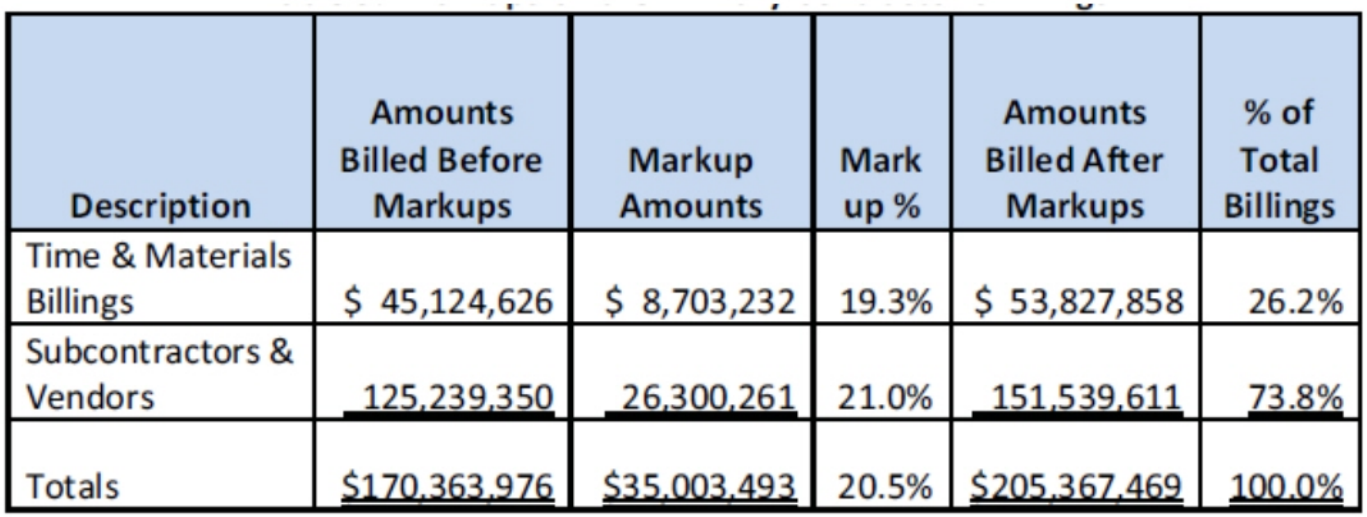
- Hurricane Katie impacts the State of Z in August 2005 and causes significant damage to School District facilities
- The School District noncompetitively awards a prime contractor a cost-plus-percentage-of-cost contract for work totaling $17.3 million for 13 projects
  - Contract largely included work necessary to open schools for the 2005-2006 school year (mold remediation; replacement of canopies; exterior windows, doors, and frames; repairs to roofing and flooring; and other various repair items)
  - Under the contract, the primary contractor added markups of 10 percent each for overhead and profit on time-and-materials billings for its own employees and on pass-through costs of its subcontractors
  - School District does not conduct price or cost analysis

Case Study – OIG 14-44-D (2014)

- The OIG stated that the “emergency” requirement to get schools opened as quickly as possible after the disaster justified the use of a noncompetitive contract
- Because the contract work expedited the opening of the schools, OIG did not question the entire contract amount, but did recommend disallowing $2.9 million because:
  - Federal regulations prohibit a cost-plus-percentage-of-cost contract
  - FEMA has no assurance that the District paid a fair and reasonable price for the contract work.
- There were other problems with the contract, such as:
  - Applicant did not solicit competitive bids for A/E services for long term repair work for 16 projects
  - Applicant did not take affirmative steps to ensure the use of minority firms, women’s business enterprises, and labor surplus firms when possible

Cost and Price – Case Study

- Hurricane Kathleen impacts the State of Z and causes significant damage to University in August
- As part of the restoration of the facility, University awards a $205 million contract to its primary contractor using a noncompetitive, prohibited cost-plus-percentage-of-cost contract; work mainly performed from September to June



Description	Amounts Billed Before Markups	Markup Amounts	Mark up %	Amounts Billed After Markups	% of Total Billings
Time & Materials Billings	$ 45,124,626	$ 8,703,232	19.3%	$ 53,827,858	26.2%
Subcontractors & Vendors	125,239,350	26,300,261	21.0%	151,539,611	73.8%
Totals	$170,363,976	$35,003,493	20.5%	$205,367,469	100.0%

Cost and Price – Case Study

- OIG recommended, in part, the disallowance of $35 million as excessive and prohibited mark-up costs
  - Federal regulations prohibit cost-plus-percentage-of-cost because they provide no incentive for contractors to control costs—the more contractors charge, the more profit they make
  - Normally, the OIG would recommend total disallowance of the entire $205.4 million; however, it did not in this case because exigent circumstances existed at the time of the award
- University did not perform a cost or price analysis, did not take sufficient steps to ensure the use of small businesses, minority firms, and women's business enterprises, and did not include required contract provisions

Pre-Procurement Document Review

- Review of Specifications: A non-Federal entity must make available the technical specifications for a proposed procurement upon request by FEMA or the pass-through entity where FEMA or the pass-through entity believes such review is necessary to ensure that the item or service specified is the one being proposed for acquisition (2 C.F.R. § 200.324(a))
- Pre-Procurement Review of Other Procurement Documents
  - A non-Federal entity must make available upon request for FEMA or pass-through entity **pre-procurement review** of other procurement documents (such as requests for proposals, invitations for bid, independent cost estimates) in certain circumstances (2 C.F.R. § 200.324(b))
  - A non-Federal entity is exempt from the pre-procurement review if FEMA or the pass-through entity determines that its procurement systems comply with the standards under 2 C.F.R. pt. 200

Bonding Requirements

- A non-Federal entity must follow its own bonding requirements for construction or facility improvement projects beneath the simplified acquisition threshold (2 C.F.R. § 200.325)
- A non-Federal entity must meet certain bonding requirements for construction or facility improvement projects above the simplified acquisition threshold (2 C.F.R. § 200.325(a)-(c))
  - A non-Federal entity may use its own bonding policy and requirements provided that FEMA or the pass-through entity has made a determination that the Federal interest is adequately protected
  - If no such determination has been made, the bonding requirements are:

    A bid guarantee from each bidder equivalent to 5% of the bid price

    A performance and payment bond on the part of the contractor for 100% of the contract price

Hypothetical

City conducts a procurement through sealed bidding for debris removal services, awarding the contract on a unit price basis with estimated total costs of $400,000. Neither FEMA nor the State has certified the bonding policy and requirements of the City.

Is the procurement subject to the bonding requirements of 2 C.F.R. § 200.325?

Required Contract Provisions

- A non-Federal entity’s contracts are required to contain certain provisions – some are based on sound contracting practices and others are required by federal law, executive order, and regulations (2 C.F.R. § 200.326)
- These required provisions are provided in Appendix II to Part 200—Contract Provisions for Non-Federal Contracts Under Federal Awards

Procurement of Recovered Materials

- A non-Federal entity that is a **state agency or agency of a political subdivision of a state and its contractors** must comply with section 6002 of the Solid Waste Disposal Act, as amended by the Resource Conversation and Recovery Act (2 C.F.R. § 200.322)
- The requirements of Section 6002 include:
    - Procuring only items designated in guidelines of the EPA at 40 C.F.R. pt. 247 that contain the highest percentage of recovered materials practicable, consistent with maintaining a satisfactory level of competition, where the purchase price of the item exceeds $10,000 or the value of the quantity acquired during the preceding fiscal year exceeded $10,000
    - Procuring solid waste management services in a manner that maximizes energy and resource recovery
    - Establishing an affirmative procurement program for procurement of recovered materials identified in the EPA guidelines

Suspension and Debarment

- Non-federal entities and contractors are subject to the non-procurement debarment and suspension regulations implementing Executive Orders 12549 and 12689, 2 C.F.R. pt. 180 (2 C.F.R. § 200.212)
- Non-Federal entities must not make any award or permit any award at any tier to parties listed on the governmentwide exclusions in the System for Award Management ("SAM"), which can be found at www.sam.gov.
- The rules for assistance exclusion are also governed by DHS implementing regulations at 2 C.F.R. pt. 3000

Agenda

- Background
- Terminology and Key Players
- Procurement Standards for States
- Procurement Standards for Other Non-Federal Entities
- Differences between the New and Old Procurement Standards

States

- The former standard at 44 C.F.R. § 13.36(a) is substantively the same as 2 C.F.R. § 200.317 – a state must follow the same policies and procedures it uses for procurements from its nonfederal funds
- There is a slight difference in the case of contract clauses
  - The previous standard required that the “state will ensure that every purchase order or other contract includes any clauses required by Federal statutes and executive orders and their implementing regulations
  - The new regulation is more prescriptive, making the state include the clauses required by 2 C.F.R. § 200.326
- The new standard also makes clear a state needs to comply with 2 C.F.R. § 200.322 (procurement of recovered materials)

IHEs, Hospitals, and Other PNPs

- The former procurement standards applicable to institutions of higher education, hospitals, and other nonprofit organizations were set forth at 2 C.F.R. §§ 215.40 through 48
- These former procurement standards were similar, but not the same, as the new standards
  - The new procurement standards devote great attention to the methods of procurement that must be followed
  - Geographic preferences are expressly prohibited
  - There are different affirmative steps related to small and minority businesses, women’s business enterprises, and labor area surplus firms
  - Written standards of conduct must include provisions for organizational conflict of interest in the case of parents, subsidiaries, and affiliates
  - There are some additional documentation requirements concerning the choice of the method of procurement and contract type
  - Conditions precedent for time and materials contracts

FEMA

Government Entities (not States)

- There are some important distinctions between the former standards at 44 C.F.R. § 13.36 and the new standards
- The methods of procurement have changed
  - There is now a micro-purchase method of procurement
  - Clarifies that the small purchase procedures apply to simplified acquisitions of $150,000
  - Removal of the “infeasibility” condition precedent for a procurement through noncompetitive proposals
  - Requirement for sealed bids to be advertised and opened publicly is limited to local and tribal governments
- The regulation expressly prohibits contractors that develop or draft specifications, requirements, statements of work, or invitations for bids or proposals from competing for such requirements

Government Entities (not States)

- The cost or price analysis regulation has changed
  - Cost or price analysis only required for procurements exceeding the simplified acquisition threshold (used to be required for all procurements)
  - No longer a requirement to conduct a cost analysis when adequate price competition is lacking; and for sole source procurements, including contract modifications or change orders
  - All non-Federal entities required to perform independent estimate
- There is new content required in a non-Federal entity's written standards of conduct for organizational conflicts of interest arising due to related organizations
- Removal of content requiring non-Federal entities to have protest procedures to handle and resolve disputes related to procurements and also content explaining when the Federal awarding agency will review protests

Public Assistance Program Management and Grant Closeout

Standard Operating Procedure
SOP 9570.14
September 2013

Recovery Directorate Manual

Public Assistance Program Appeals Procedures
(Version 3)
Approved Date: 4/7/2014

Public Assistance Program Management and Grant Closeout

Sub-section

Public Assistance Mission Statement

"The mission of the Public Assistance (PA) Program is to assist communities in recovering from the devastating effects of disasters by providing technical assistance and financial grants in an efficient, effective, consistent, and customer-friendly manner. The Federal Emergency Management Agency (FEMA) will accomplish the mission by having experienced, trained, knowledgeable, and friendly staff; well-documented, easy-to-understand, and accessible policies and procedures; timely and transparent decision-making; and a strong partnership with the States. FEMA will continuously seek and identify opportunities to improve program delivery."

PA Process Consists of Two Distinct Phases

1) The Grant Development Phase
2) The Program Management and Grant Closeout Phase

Each phase has distinct objectives that represent progress toward the desired goal:

> *“To provide effective assistance and excellent customer service necessary to assist Subgrantees in recovering from a declared event while ensuring responsible stewardship of public funds.”*

Phase 1 – Grant Development

Phase 1) - The Grant Development: Tasks & Transition

- Receive RPAs
- Conduct Kickoff Meetings
- Prepare PWs
- Enter PWs into EMMIE, obligating funds
- Complete Exit Briefings
- Complete 100 percent grant development
- Transition from Grant Development phase to Program Management and Closeout phase *(see next slide)*

Transition – Phase 1 to Phase 2

- Transition from Phase 1 - Grant Development to Phase 2 - Program Management and Closeout
  - FEMA may close the JFO when PA Program staff obligates 90 to 95 percent of eligible projects or completes 100 percent of field work.
  - When the JFO closes, FEMA transfers grant administration responsibilities to staff at a processing center or FEMA Regional office until 95 to 100 percent of the eligible projects have been obligated (see PA Operations Manual).
  - The timeframe for this phase varies by disaster events, but typically lasts two to six months for small and medium disaster events and one year or longer for large disaster events

Phase 2 - The Program Management and Grant Closeout: Milestones

- Ongoing Subtasks for each Quarter for the Grantee
  - Review Large Project Quarterly Progress Reports and establish performance measures. Use this report as a tracking mechanism to track progress of large projects and to identify projects that are ready for closeout.
  - Coordinate Final Inspections and complete Final Inspection Reports for all Large Projects listed as 100% complete.
  - Track progress of small projects and close out Subgrantees that have all projects at 100% completion and that do not have large projects or pending issues.
  - Close subgrantees that have all projects at 100% completion and all large projects are 100% complete and closed out.

Milestones *(Continued)*

- 0 - 6 Months – Close Subgrantee (s) with $0.00 Funding or all work 100% complete on all projects.
- 6 - 12 Months – Close Subgrantee(s) with only100% complete Emergency Work projects and are without Grantee Time Extensions.
- 12 - 18 Months – Close Subgrantee(s) with all 100% Permanent and Emergency work projects without FEMA or Grantee Time Extensions.
- 18 - 48 Months – Close Subgrantee(s) with 100% Permanent Work Projects without Grantee Time Extensions.
- 48 + Months – Close Subgrantee(s) with 100% Permanent Work projects without FEMA approved Time Extensions.
- Another Way to Understand Time Extensions (TE):

Category	Regulatory Deadline	Grantee Time Extension Authority	Total Time Allowed (with Grantee Time Extension)
Categories A and B	6 Months	6 Months	12 Months
Categories C–G	18 Months	30 Months	48 Months

- Grantees can request a FEMA time extension on behalf of an applicant to extend the period of performance beyond the grantee's authority. FEMA may or may not approve the extension request depending on the justification provided by the grantee/subgrantee

Milestones *(Continued)*

- Period of Performance
  - For the overall program this is the period of time (four years from date of disaster) during which the Grantee is expected to complete all physical work and obligate program funds.
  - Although such a timeframe is established up front, this does not mean that the Grantee cannot close the grant early.
  - If projects have been completed, then the program should be requesting grant closeout sooner.
  - Time extensions to the POP may delay the closing of the PA Grant.

- The Program Management and Grant Closeout
  - Begins for small applicants and their projects as the Grant Development phase starts to end.
  - It involves monitoring work completion, reconciling final costs, closing out projects, and closing out the disaster grant.
  - This phase may last between three and five years for small and medium disaster events and six years or longer for large disaster events.

Summary of the Two Phases

- Each phase of the PA process involves unique objectives and tasks that require significant staff resources and an expert level of program knowledge to successfully meet the stated goal.
- The PA process must adhere to all relevant Federal, State, and local laws, regulations, and policies, while providing eligible PA funding in a timely and effective manner.
- Both phases are time-sensitive and critical to disaster recovery.
- Grantees and Subgrantees expect and should receive exemplary customer service from FEMA during both phases of the PA process.

current year

** Denna has a more updated status due to the Large Project Quarterly Reporting.*

Due 4 Yr or *PW TE's*

1st Priority – Time Sensitive Requests (TSR)

- Time sensitive request are considered any change to a PW that are ***required*** to be approved by FEMA according to the Stafford Act, the 44 CFR or Public Assistance Policy.
- The Closeout Center's prioritization includes, but is not limited to the following:
  - Alternate Projects
  - Amendments – Change in Scope of Work, Cost, Grade Raise, etc.
  - Appeals
  - Improved Projects (include Transfer of Functions (TOF))
  - Time Extensions

2rd Priority – Headquarters / Policy / Period of Performance Goals

The philosophy is finish disasters with Headquarters Goals:

- Emergency Declared Disasters need to be finish with 2 years
- Major Declared Disasters need to be finished within 4 years

Sequence of Priority

- Category A/B 100% complete
- Other Category A/B
- Category C-G 100% complete
    - Submit LPC within 90 days of project completion
- Close Applicants as projects are closed

3nd Priority – Oldest received Large Project Closeouts (LPC's)

The philosophy is "first in/first out", as of December 31, 2014:

- The oldest received LPC, not being worked on yet, is 22 months ago.
- The Closeout Center is putting together a plan to bring the priority down to 6 months.

Large Project Closeout Analysis

- Final Reconciliation Report
- Final Inspection Report
- Summary of Documentation
- Explanation of Under-runs or Over-runs
- Supporting documentation

LPC Analysis

FINAL APPROVAL OF LARGE PROJECT COSTS FOR SUBGRANT:

PA-08-(State)-(Disaster #) – PW ?????
GRANTEE: (State of or Tribe)
SUBGRANTEE: (Applicant)
COUNTY: (County)
DECLARATION DATE: (Month, Day, Year)

INCIDENT PERIOD: (Date to Date)
PA ID (FIPS #): (???-?????-??)
Reviewed by: (your name)
Date: (Month, Day, Year)

(Include this paragraph)

“A review of the accounting of costs and written analysis submitted by the GAR for this large project has been completed. The costs and work for which final payment approval was requested are considered eligible and in conformance with the approved project application, supplements, related correspondence and the FEMA/State Agreement, except for adjustments resulting from our review, which are explained below.”

COMMENTS AND ADJUSTMENTS

BACKGROUND:

1) Use the paragraph below in this Section:
- "A request for large project closeout was received from the GAR (or TAR), by letter dated (month/date/year) recommending an eligible amount of $xxx.xx. The request contains the Subgrantee's closeout request letter dated (month/date/year)."

  Note: Make sure there is a copy of the Applicant's request for Closeout included in the Grantee's request packet

2) Use the paragraph below in this Section [required by CFR 206.205(b)]:
- "The GAR (or TAR) letter states that work was completed according to the scope of work in the project worksheet. The GAR (or TAR) certified that reported costs were incurred in the performance of eligible work, the approved work was completed, the project was completed in compliance with the provisions of the FEMA/State (of Tribe) Agreement and payments for the project made in accordance with 44CFR Part 13.21."

  Note: If such statements are not included, have a discussion with the State Lead and contact the GAR (or TAR) to get these affirmations added to their request for closeout.

3) This paragraph should include a summary (or recap) of the Damage Description (DD).
- Can be based on the original PW language (don't perpetuate a bad DD);
- Add information to describe any DD changes and/or to summarize all versions;
- PW preparation date, percent complete when written

SCOPE:

Review the following:

- Review the original PW's Scope of Work (SOW);
- If there is a Version;
  - Check if there was "addition" to the SOW, or
  - If there was an "change" to the SOW, or
  - If there was an "exchange" of the SOW;
    - Versioned to be Improved or Alternate Project;
  - Confirm the work was completed;
- If there was a Hazard Mitigation Proposal (HMP) (see HMP for more direction);
  - Check if there was an " add-on" to the SOW, and/or
  - If there was an "upgrade" to the SOW, or
  - If there was an "exchange" of the SOW;
  - Confirm the HMP work was completed;
- Review the GAR's (or TAR's) summary of the SOW;
- Compare the Authorized SOW with the GAR's (or TAR's) summary of the SOW;
  - Make sure there is justification for variances from the SOW

This Section should include the following:

- Write a summary (or recap) of the Authorized Scope of Work;
  - If applicable, include the "addition" and/or the "change" or the "exchange" associated with the Version/s;
  - If applicable, include HMP SOW;
    - State the HMP added " add-on" work (see HMP Section details), and/or
    - State the HMP "upgraded" the work (see HMP Section for details), or
    - State the HMP "exchanged" the pre-disaster conditions with the HMP SOW;
      - Summaries the pre-disaster conditions SOW;
      - Use the HMP SOW as the Authorized SOW;
- Include a statement to the effect that the Authorized SOW was followed;
  - Usually restoring to pre-disaster design, condition and function, or;
  - Instead an exchange for HMP or least cost alternative;
- If the Authorized SOW was NOT followed, include a statement and explain variations;

Note: Be aware of possible upgrades during construction (usually included in the costs) because it is typically not eligible.

COMPLETION TIME:

Review the following:

- What Category and type of work;
    - Emergency Work (Cat A or B) have 6-months;
        - Over 6-months to 12-months need a Grantee approved Time Extension;
        - Over 12-months need a FEMA approved TE;
    - Permanent Work (Cat C thru G), they have 18-months;
        - Over 18-months to 48-months need a Grantee approved TE;
        - Over 48-months need a FEMA approved TE;
- Check the declaration date and completion due date;
- Check the incident period date;
    - Emergency work that is dated prior to the declaration date work may be eligible IF it is within the incident period, and/or
    - Prior to the incident period if it is reasonable and justified;
- If required, check for an approved TE Letter;
    - See if it is in the GAR's (or TAR's) summary;
    - See if it is on the Summary of Documentation;
    - See if it is in EMMIE under the PW and/or the RPA;

Note: If FEMA received a copy of the Grantee TE approval, the period of performance date will be reflected on the PW and a copy of the letter should be attached either to the PW or the RPA.

This Section should include the following:

- State the Category and type of work of the PW;
- State the declaration date and the last date the Category was due to be completed;
- State the date the SOW was completed;
- State that a TE is not needed, or
- If needed, state the TE and the date the SOW was due to be completed;

Note: Time Extensions are required to be on file. See grants section if the TE is missing before contacting the Grantee.

LPC Analysis

FORCE ACCOUNT LABOR: (if not applicable, state N/A)
Review the following:

- Labor Policy;
    - Emergency Work (Cat A or B);
        - Only Overtime is eligible;
            - Exception for Temporary Employees;
        - PAAP Debris allows for Straight Time if applicant elected to participate;
    - Permanent Work (Cat C thru G);
        - Regular and Overtime is eligible
- Hourly Rate and Fringe Benefit Breakdown;
    - Straight time and overtime fringe benefits will be different
        - Full time, part time, and temporary employees may have different benefits
- Labor Summary Sheets;
- Time Cards;

This Section should include the following:

- Verify the accuracy [call out validation %, (minimum 20%, more if needed)];
- Call out Labor Policy Title;
- If applicable, statement of ineligibility (CFR, policy references);
- Explanation of underruns/overruns;
- Final statement;
    - Based on review;
    - Deemed reasonable;
    - Recommend $???? be eligible for reimbursement;

Note: If validation is less than 100%, copies of the review's list and/or notes on Summary sheets must be scanned and attached to LPC package.

LPC Analysis

FORCE ACCOUNT EQUIPMENT: (if not applicable, state N/A)
Review the following:

- Equipment Summary Sheets;
- Time Cards;
  - For operator validation;
- Equipment Rates;
  - FEMA rates, or;
  - Determine reasonableness of cost;
- Mileage, if applicable;

This Section should include the following:

- Verify the accuracy [call out validation %, (minimum 20%, more if needed)];
- If applicable, statement of ineligibility (CFR, policy references);
- Explanation of underruns/overruns;
- Final statement;
  - Based on review;
  - Deemed reasonable;
  - Recommend $???? be eligible for reimbursement;

FORCE ACCOUNT MATERIALS: (if not applicable, state N/A)
Review the following:

- Invoices / Receipts;
- Proof of Payment;
  - Materials from stock or purchased new
- Material Summary Sheets (helpful, but not required);
- Reasonableness of Cost;
  - Did the GAR (or TAR) validate the cost?
  - If so, how was it validated?
- Load Tickets (for debris removal or material hauled);

This Section should include the following:

- Verify the accuracy [call out validation %, (minimum 20%, more if needed)];
- If applicable, statement of ineligibility (CFR, policy references);
- Explanation of underruns/overruns;
- Statement of reasonableness and/or justification of material not included in the Authorized SOW;
- Final statement;
  - Based on review;
  - Deemed reasonable;
  - Recommend $???? be eligible for reimbursement;

Note: If validation is less than 100%, copies of the review's list and/or notes on Summary sheets must be scanned and attached to LPC package.

Note: Material Summary Sheets may be used to compare with the Eligible Scope, for general conformity.

LPC Analysis

RENTAL EQUIPMENT: (if not applicable, state N/A)
Review the following:

- Invoices / Receipts;
- Proof of Payment
- Rental Equipment Summary Sheets (helpful, but not required);
  - May be certified by the applicant;
- Rental Agreement:
  - Need an agreement for each piece of equipment;
  - Match agreement with invoice;
  - If there was repairs to the equipment, who is responsible?
- Reasonableness of Cost;

This Section should include the following:

- Verify the accuracy (call out 100% validation);
- If applicable, statement of ineligibility (CFR, policy references);
- Explanation of underruns/overruns;
- Statement of reasonableness and/or justification of rental equipment not included in the Authorized SOW;
- Final statement;
  - Based on review;
  - Deemed reasonable;
  - Recommend $???? be eligible for reimbursement;

Note: If validation is less than 100%, copies of the review's list and/or notes on Summary sheets must be scanned and attached to LPC package.

LPC Analysis

CONTRACT COSTS: (if not applicable, state N/A)
Review the following:

- Procurement Policy;
- Procurement Process;
  - Bid Notification;
  - Bid Tabulation;
  - Bid Notice of Award;
  - If not a bid process;
    - State how the non-bid process is justified in the Procurement Policy;
    - Determine Reasonableness of Cost;
- Contract / Agreement;
  - Defines Scope of Work;
- Invoices;
- Proof of Payment
- Miscellaneous Food, Lodging & Per Diem;
  - Review Contract / Agreement;
  - Alcoholic Beverages are NOT eligible;
  - Reasonableness of Costs;

This Section should include the following:

- Verify the accuracy (call out 100% validation);
- If applicable, call out copies of Change Orders and explanation/justification;
- If applicable, statement of ineligibility (CFR, policy references);
- Explanation of underruns/overruns;
- Statement of reasonableness and/or justification not included in the Authorized SOW;
- Final statement;
  - Based on review;
  - Deemed reasonable;
  - Recommend $???? be eligible for reimbursement;

LPC Analysis

DESIGN AND ENGINEERING/ CONSTRUCTION MANAGMENT: (if not applicable, state N/A)

Review the following:

- Procurement Policy;
- Contract / Agreement;
  - Defines Scope of Work (make sure it covers the DD);
- Procurement Process;
  - Copy of Request for Proposals (RFP);
  - List of companies submitted proposals;
  - Applicant Selection Process;
  - If not a bid process;
    - State how the non-bid process is justified in the Procurement Policy;
  - Determine Reasonableness of Cost (PA Policy, page 59-60 – Curve A or B)
- Detailed Invoices;
  - Names / Titles
  - Hourly Billing Rates
  - Work accomplished
- Proof of Payment
- Miscellaneous Food, Lodging & Per Diem;
  - Review Contract / Agreement;
  - Alcoholic Beverages are NOT eligible;
  - Reasonableness of Costs;

This Section should include the following:

- Verify the accuracy (call out 100% validation);
- If applicable, call out copies of Change Orders and explanation/justification;
- If applicable, statement of ineligibility (CFR, policy references);
- Explanation of underruns/overruns;
- Statement of reasonableness and/or justification not included in the Authorized SOW;
- Final statement;
  - Based on review;
  - Deemed reasonable;
  - Recommend $???? be eligible for reimbursement;

Note: Curves cover basic engineering such as design, bid process, administering the contract, some inspection. Special engineering such as laboratory soil/concrete/materials testing is beyond the curve values. Land surveys are typically in addition to the curve values, too.

MUTUAL AID AGREEMENT: (if not applicable, state N/A)
Review the following:

- Mutual Aid Agreement/Policy;
  - Briefly defined: Agreement between jurisdictions or agencies to provide services across boundaries in the event of an emergency or major declaration;
  - Review pre-event mutual aid policy, which will define the following;
    - Requesting entity (agency or jurisdiction requesting mutual aid assistance from a providing entity;
    - Providing entity (agency/jurisdiction that provides the assistance to requesting entity);
    - Terms of reimbursement (normally the requesting entity claims the eligible costs through FEMA based on a claim provided by Provider to the Requestor who agrees to disburse funds back to the Provider);
    - If no agreement, post event agreement may be OK, if put down in writing within 30 days of the Applicant Briefing;
  - Review the agreement;
    - Periods of unpaid assistance;
    - Eligible work/eligible costs;
    - Reasonableness;
    - Not dependent upon federal assistance;
- Invoices;
- Miscellaneous Food, Lodging & Per Diem;
  - Review Contract / Agreement;
  - Alcoholic Beverages are NOT eligible;
  - Reasonableness of Costs;
- FEMA Policy 9523.6;

This Section should include the following:

- Verify the accuracy (call out 100% validation);
- If applicable, statement of ineligibility (CFR, policy references);
- Statement of reasonableness and/or justification not included in the Authorized SOW;
- Final statement;
  - Based on review;
  - Deemed reasonable;
  - Recommend $xxx.xx be eligible for reimbursement;

LPC Analysis

SALVAGE: (if not applicable, state N/A)
Review the Following:

- Equipment purchases greater than $5000? (it may be necessary for the Grantee or Subgrantee to purchase supplies or equipment to respond to a DR.
- If FMV (aggregate) exceeds $5000, FEMA must be compensated when no longer needed.
- FMV values determined by selling in competitive market or research advertised prices for similar items on the used market.
- FMV determined by FEMA (can be based on research provided by Grantee or Subgrantee)
- Can be deducted on original PW (if known) or through LPC process
- Examples: equipment, materials (sandbags, electrical conductor, timber debris, mulch, scrap metal, transformers, etc.
- May have charts to show conversion for electrical conductor or backup supporting salvage calculation.
- FEMA policy 9515.12

This section should include:

- Calculations for determining market value, (or reference to);
- Statement of reasonableness and/or justification not included in the Authorized SOW;
- If applicable, statement of ineligibility (CFR, policy references);
- Final Statement
  - Based on Review
  - Deemed reasonable
  - Recommend $???? Be eligible for reimbursement

DIRECT ADMINISTRATIVE COSTS (DAC): (if not applicable, state N/A)
Review the following:

- Force Account DAC;
  - Make sure it's properly documented and directly chargeable;
  - Make sure the labor is consistent with the Labor Policy (have a copy);
  - Hourly Rate and fringe Benefit Breakdown;
  - DAC Summary Sheets detailed with;
    - Names and titles;
    - Dates and detailed descriptions of work;
  - Timesheet support (time cards, etc.);
- Contract DAC;
  - Contract / Agreement;
    - Defines Scope of Work (make sure it covers the DD);
  - Procurement methodology;
  - Properly documented and directly chargeable;
  - Reasonableness considerations:
    - Method of contracting;
    - Skill level of persons performing the tasks;
    - Skill level appropriate to task;
    - Amount of time spent;
    - Detailed description of action in detail;
    - FEMA determines reasonableness;
- FEMA Policy 9525.9 and Zimmerman memo;

This Section should include the following:

- Verify the accuracy (call out 100 % validation);
- If FA, call out Labor Policy Title;
- If applicable, statement of ineligibility (CFR, policy references);
- Final statement;
  - Based on review;
  - Deemed reasonable;
  - Recommend $???? be eligible for reimbursement;

LPC Analysis

HAZARD MITIGATION: (if not applicable, state N/A)
Review the following:

- If there was a Hazard Mitigation Proposal (HMP);
  - Check if there was an " add-on" to the SOW, and/or
  - If there was an "upgrade" to the SOW, or
  - If there was an "exchange" of the SOW;
  - Confirm the HMP work was completed;
- Review Authorized HMP SOW cost effectiveness justification (RP9526.1);
  - 15% Rule, or;
  - 100% Rule (Appendix A), or;
  - Benefit Cost Analysis (BCA);
- If able, separate the HMP actual costs from the total actual costs;

Note: Consult a specialist with questions and/or concerns – Don't make assumptions.

This Section should include the following:

- State the HMP added;
  - "add-on" work, and/or;
  - "upgraded" the work, or;
  - "exchanged" the pre-disaster conditions with the HMP SOW;
    - If so, state the explanation is in the Scope of Work Section;
- State if the HMP is still cost effective per policy;
  - Compare the estimated HMP cost with the actual HMP cost;
  - Compare the estimated pre-disaster conditions cost (faceplate) with the actual pre-disaster conditions cost;
  - Compare against the estimated HMP justification ;
    - Calculate (actual HMP cost /actual pre-disaster cost = %)
    - See if it matches the estimated cost justification;
      - ➢ 15% Rule, or;
      - ➢ 100% Rule, or;
      - ➢ BCA;

LPC Analysis

INSURANCE: (if not applicable, state N/A)
Review the following:

- Review EMMIE and Insurance associated with the PW;
  - Identify if there was Anticipated Insurance Proceeds (Cost Code 5900 or 5905), if so, confirm additional insurance documents needed for Closeout:
    - Proof of Loss (POL)
    - Adjuster's Estimate
    - Spread Sheet as needed for multiple locations/claims
    - Claim Summary
    - Check Stub
  - Identify if there was an insurance requirement to "obtain & maintain" insurance, under "Insurance Information" drop-down, and if so confirm additional insurance documents needed for Closeout:
    - Schedule of Values (SOV)/Schedule of Locations (SOL);
    - Declaration Page ("Dec" Page);
    - Policy;
      - Coverage;
      - Endorsements;
      - Exclusions;
      - Amendments;
    - *Note: There should be a DEC page showing coverage within 1-2 weeks of construction ("obtaining"), and a more recent DEC page for present coverage ("maintaining").*

Note: Consult a specialist with questions and/or concerns – Don't make assumptions.

This Section should include the following;

- If there is Insurance related to the PW, state "See Insurance Information in EMMIE for specific information";
- If not, state N/A;

LPC Analysis

ENVIRONMENTAL: (if not applicable, state N/A)
Review the following:

- Review the comments and conditions on the Recommendations of Environmental Considerations (REC) find in under “ATTACHMENTS” not “Comments and Attachments”;
- If there are multiple REC’s, review all of them to make sure the latest (by date) REC contains all the required conditions;
- Review the NEPA Determination comments for background information;
- Review the Conditions to find which permits and consultations under NEPA, Environmental Law and Executive Order are required for compliance;

Note: Consult a specialist with questions and/or concerns – Don’t make assumptions.

This Section should list the EL/EO’s required for compliance in under the conditions in the REC; (see examples below)

- Clean Water Act (CWA) –
- National Historic Preservation Act (NHPA) [under the State Historical Preservation Officer (SHPO)] –
- National Environmental Policy Act (NEPA) -

LPC Analysis

PROOF OF PAYMENT (POP):

This Section should include the following:

- The % number of the eligible costs were supported by;
    - Cancelled check copies, or;
    - Invoices stamped “Paid”, or;
    - Other justified sources;
- State the supported POP (see above);
- The % number of the supported POP were verified;

APPEAL/DETERMINATION MEMO: (if not applicable, state N/A)
Review the following to see if there as a prior Appeal or Determination Memo;

- Check in EMMIE;
  - The PW;
    - In the "ATTACHMENTS" for letters and emails;
    - In the Scope of Work (SOW);
  - The RPA;
- Check in the request documentation;
- Check to see if there is "new information" being presented that may change the past Appeal and/or Determination Memo's;

Note: Prior to the required Determination Memo process, some determinations were added in the SOW. Be aware of determination language in the SOW notes and versions.

This Section should include the following:

- If there was a prior determination, recap what has been appealed or previously found ineligible.
  - If there is "new information" that MAY change the past determination, get with the State Lead for direction;
  - Call out were the "new information" can be found;
    - If they are listed on the Summary of Documentation (SOD) call out the location;
    - May add copies of those specific "new information" documents with the Analysis review documents;
- If not, state N/A;

LPC Analysis

TABLE OF VALUES: (funding below is an example)

Description (as needed)	GAR (or TAR) Recommends	FEMA Eligible	FEMA Adjustment
FA Labor	$ 90,022.02	$ 89,543.10	($ 478.92)
FA Equipment	$ 549,228.30	$ 549,228.30	$ 0.00
Materials	$ 108,974.03	$ 104,821.52	($4,152.51)
Contracts	$ 3,562.50	$ 3,562.50	$ 0.00
Rented Equipment	$ 20,208.16	$ 20,208.16	$ 0.00
	$ 771,995.01	$ 767,363.58	($ 4,631.43)

TOTAL ELIGIBLE COST: **$ 767,363.58**

Note: This is a required statement (use FEMA Eligible in the table of values above).

PW ENTRIES: Listed in this order:

9083 Deduct Previously Obligated Project Costs ($__________) *(from the Variance)*
9081 Project Costs Recommended by GAR (or TAR) $__________ *(from above)*
9082 FEMA Adjustment (either + or –) $__________ *(from above)*
This version value $__________

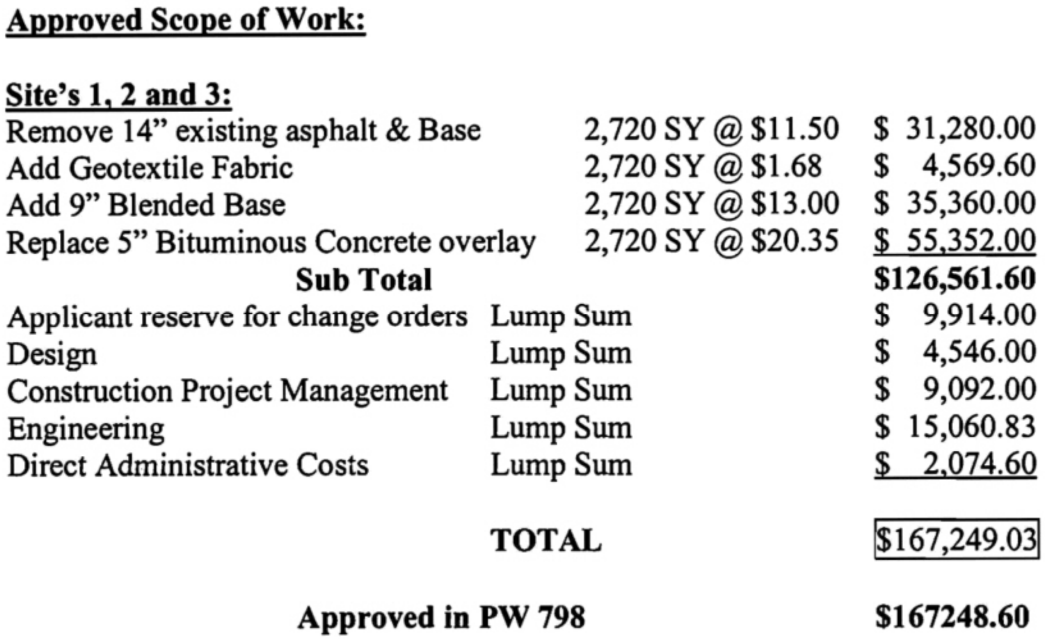
Determination Memo

- Used when taking a negative action against grantee or sub-grantee request
- Memo is used as way to document decision using policy and regulations
- Only after conversations with Grantee and Sub-grantee have been exhausted
- Another tool to make sure decisions are being communicated to applicants

Variances in SOW

- Defined in SOP 10.2.3
  - FEMA/Grantee ensures compliance with the SOW
  - Review work done to determine eligibility
    - Must be documented in detail
  - Examples

PW Scope of Work – Example 1

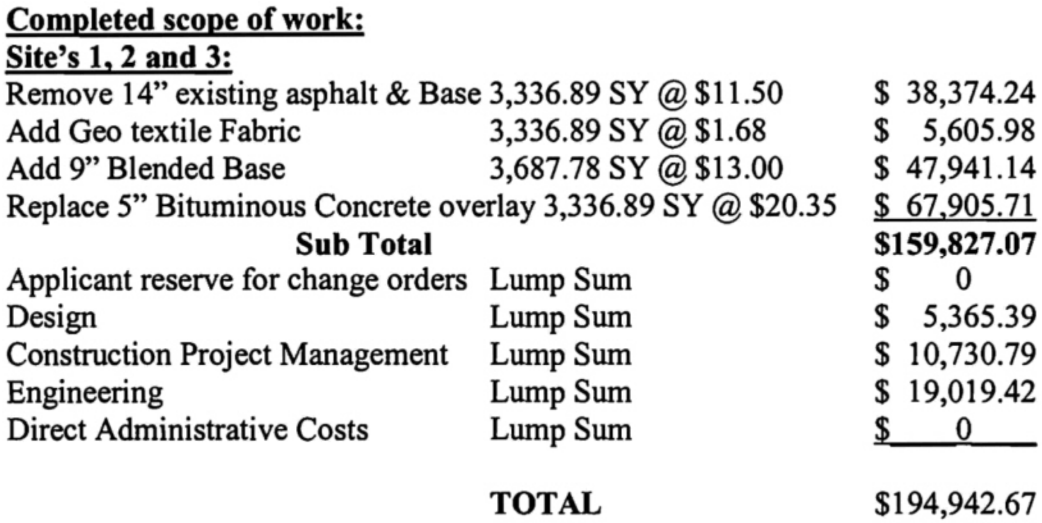


Approved Scope of Work:

Site's 1, 2 and 3:

Remove 14" existing asphalt & Base	2,720 SY @ $11.50	$ 31,280.00
Add Geotextile Fabric	2,720 SY @ $1.68	$ 4,569.60
Add 9" Blended Base	2,720 SY @ $13.00	$ 35,360.00
Replace 5" Bituminous Concrete overlay	2,720 SY @ $20.35	$ 55,352.00
Sub Total		**$126,561.60**
Applicant reserve for change orders	Lump Sum	$ 9,914.00
Design	Lump Sum	$ 4,546.00
Construction Project Management	Lump Sum	$ 9,092.00
Engineering	Lump Sum	$ 15,060.83
Direct Administrative Costs	Lump Sum	$ 2,074.60
	TOTAL	$167,249.03
Approved in PW 798		**$167248.60**

Completed Scope of Work – E1



Completed scope of work:

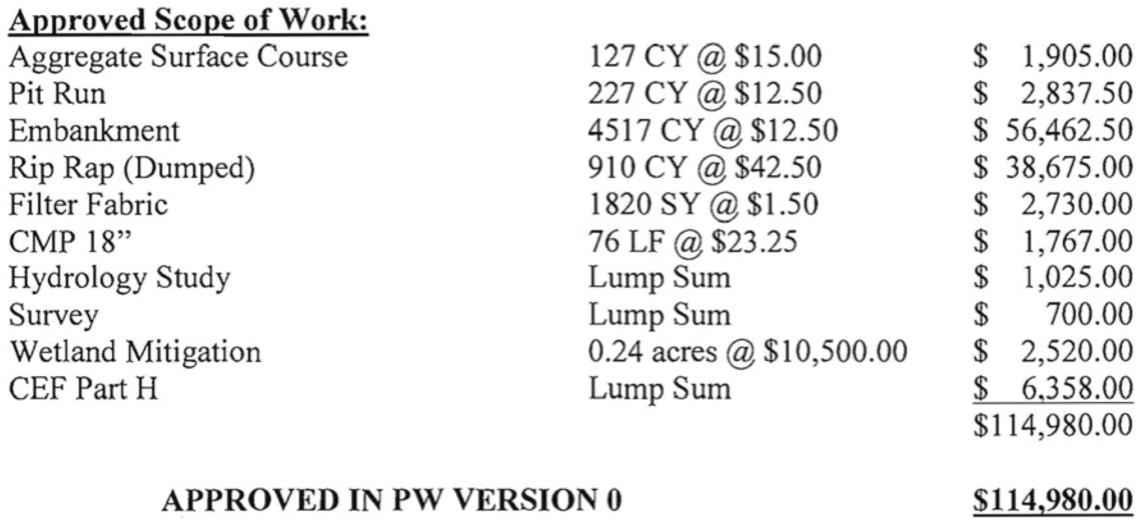
Site’s 1, 2 and 3:

Remove 14” existing asphalt & Base	3,336.89 SY @ $11.50	$ 38,374.24
Add Geo textile Fabric	3,336.89 SY @ $1.68	$ 5,605.98
Add 9” Blended Base	3,687.78 SY @ $13.00	$ 47,941.14
Replace 5” Bituminous Concrete overlay	3,336.89 SY @ $20.35	$ 67,905.71
Sub Total		**$159,827.07**
Applicant reserve for change orders	Lump Sum	$ 0
Design	Lump Sum	$ 5,365.39
Construction Project Management	Lump Sum	$ 10,730.79
Engineering	Lump Sum	$ 19,019.42
Direct Administrative Costs	Lump Sum	$ 0
	TOTAL	$194,942.67

Example 1 Discussion

- What is the eligible SOW?
- Did the applicant follow the SOW?
- Why would the over-run be eligible?
- What are ways to improve this description of the SOW?

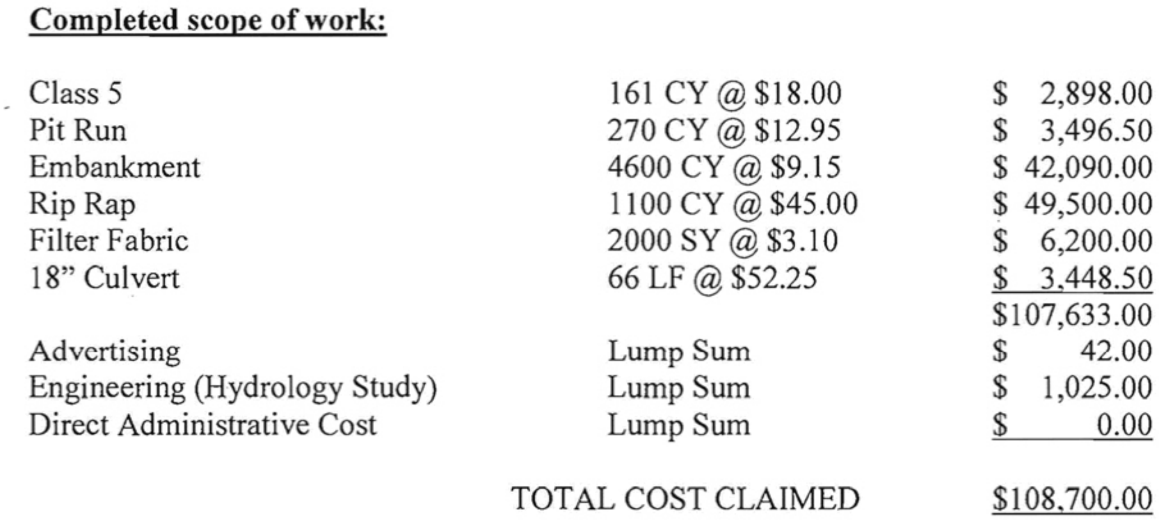
PW Scope of Work – Example 2



Approved Scope of Work:

Aggregate Surface Course	127 CY @ $15.00	$ 1,905.00
Pit Run	227 CY @ $12.50	$ 2,837.50
Embankment	4517 CY @ $12.50	$ 56,462.50
Rip Rap (Dumped)	910 CY @ $42.50	$ 38,675.00
Filter Fabric	1820 SY @ $1.50	$ 2,730.00
CMP 18"	76 LF @ $23.25	$ 1,767.00
Hydrology Study	Lump Sum	$ 1,025.00
Survey	Lump Sum	$ 700.00
Wetland Mitigation	0.24 acres @ $10,500.00	$ 2,520.00
CEF Part H	Lump Sum	$ 6,358.00
		$114,980.00
APPROVED IN PW VERSION 0		**$114,980.00**

Completed Scope of Work – E2



Completed scope of work:

Class 5	161 CY @ $18.00	$ 2,898.00
Pit Run	270 CY @ $12.95	$ 3,496.50
Embankment	4600 CY @ $9.15	$ 42,090.00
Rip Rap	1100 CY @ $45.00	$ 49,500.00
Filter Fabric	2000 SY @ $3.10	$ 6,200.00
18" Culvert	66 LF @ $52.25	$ 3,448.50
		$107,633.00
Advertising	Lump Sum	$ 42.00
Engineering (Hydrology Study)	Lump Sum	$ 1,025.00
Direct Administrative Cost	Lump Sum	$ 0.00
	TOTAL COST CLAIMED	$108,700.00

Example 2 Discussion

- What is the eligible SOW?
- Did the applicant follow the SOW?
- Why would the over-run be eligible?

What is justifiable??

- Were there other undocumented damages?
- Was there a general construction practice used?
- Change Orders?
  - Essential for changes to contracts
- Is it reasonable?

Procurement

- Procurement applies no matter the Category of Work
- 44 CFR Part 13
- 2 CFR Part 225 (OMB A-87)
- State Procurement Codes
- Local Procurement Policies
- Super Circular
    - Only for DR's after Dec 2014

44 CFR Part 13

- Exigent circumstances do apply
  - Only during the "Emergency Period"
- Small Purchase Threshold
  - $100,000 prior to October 2010
  - $150,000 post October 2010
- Reasonable Cost

State Laws

- All applicants must be in compliance with State Regulations and laws
- Once the emergency period is done all efforts to comply must be made

Local Procurement

- If policy is in place must follow
- Should be documented and policy on file
    - Attached to RPA in EMMIE

Documents to Ensure Procurement

- Informal Procurement
  - Who, when, what was response
- Formal Procurement
  - Bid Package and Advertisement
  - Bid Tabulations
- If claiming exigent circumstance
  - What was the exigent circumstance and what measures did you take to attempt procurement?

What is a Reasonable Cost

- Would you pay an engineer $300/hr. to make copies and file paperwork?
- Determined by what a prudent person would pay for the services in a similar circumstance
  - Other properly procured prices for similar work
- MUST be established when outside the Federal Small Purchase Threshold

Document, Document, Document

If it isn’t documented it didn’t happen

Direct Admin Cost

- Must be well documented
    - All standards held for FA Labor/Equipment
- If using contracted DAC must be properly procured and reasonable
    - Tasks completed must be well documented
    - Case Study – Iowa DAC Second Appeal
- Must Follow Stafford Act Section 324, 44 CFR Part 207, and DAP 9525.9

Improved Projects

- Funding capped at cost to repair/replace damaged facility or actual cost of completing the improvement, whichever is less
  - 44 CFR 206.203(d)(1)
- Improved facility must have same function and at least same capacity as that of the pre-disaster facility/work within incident period/ legal responsibility
- Additional costs to comply with codes/standards, environmental laws, and engineering are not eligible.
- HMP costs for the original facility may be eligible.
  - DAP 9526.1

Improved Project Requests that include a Transfer of Function Request

- A transfer of function is a form of improved project under which the applicant opts to abandon a site and use the funds to meet other needs relative to the function of the abandoned site.
- Only those critical routes that provide primary (sole access) to occupied residences are recommended for repairs and potential Transfers of function
- An Evaluation of alternative routes process is required under 44 CFR Part 9, the eight step process, EO 11988 and EO 11990 and also contains a provision for "no action".
- Exact locations of all proposed "source" sites to be abandoned and "target" sites to receive funding must be identified for EHP reviews and permitting
- All inundated site project decisions require review under the FEMA 8 Step Planning process for Floodplain/Wetland Management. Review steps 5 and 6 require a determination that impacts are minimized and the project must be practical.
- Cost reasonableness and number of residents benefiting from the repair must be considered when determining the best option for a damaged site. Additionally, future vulnerability and potential for costly repairs of the inundated site must be considered.

Alternate Project Requests

- Detailed SOW of what applicant wants to do
  - Cite if within DAP 9525.13
    - If the original damaged facility is not being repaired, replaced, or sold the damaged facility must be rendered safe.
- Location work will be completed
  - Important for EHP review and floodplain management (9 Step Process)
- Applicant's cost estimate to perform the Alternate Project SOW
- Show calculation of reduction of cost on federal share
  - 10% for public facilities
  - 25% for private non-profit facilities
  - No reduction if a Fixed Cost Estimate under PA Alternate Procedures (PAAP)
- Citation that the project is capped at the federal share or actual costs, whichever, is less.
  - "Federal funding for alternate projects will be limited to 90%/75% of the Federal share of the Federal estimate of the cost estimate, or the actual cost of the project; whichever is less."
- Mitigation is not eligible under an Alternate Project
  - PAAP is an exception and it is transferable on a case-by-case basis.
    - Must go to HQ.
- Insurance commitments may still apply
  - Consult Insurance specialist if there will be an "obtain and maintain" commitment for alternate project.

Environmental Historical Preservation

Sub-section

H&H Study

- Is a standalone document prepared and signed by an Engineer licensed in the State of North Dakota and qualified to perform such work.
- Should include:
    - Pre-disaster site conditions
    - Identify exact location
    - Description of methodology
    - Explanation of the storm frequency used
    - Discussion of other site conditions; i.e. counter sink
    - Summary statement that includes PE signature/stamp

H&H Continued

- FEMA funding is conditional on the evaluation of the H&H and the stated upstream/downstream impacts
- Document must include the engineer firm's letterhead, PE signature/stamp
- Should include calculations and references used to perform analysis

Re: FEMA PA-08-ND-4128-PW-00158(0) in Layton Township
Hydrology &Hydraulic Study for Sec 27&28, T158N, R78W

MICHAEL R. RIVINIUS
PE 4446
3-18-2015

I hereby certify that this report was prepared by me or under my direct supervision and that I am a duly registered professional engineer under the laws of the State of North Dakota. This document was originally issued and sealed by Michael Rivinius, Registration number PE-4446 on 03/18/2015.

I. PURPOSE

At the request of Darlene Carpenter, McHenry County Auditor, Wold Engineering, P.C. has evaluated an existing culvert crossing site to determine the size and number of culverts required for a township road in Section 27&28 of Township 158N and Range 78W. This site is approximately 6.5 miles south of Upham, ND.

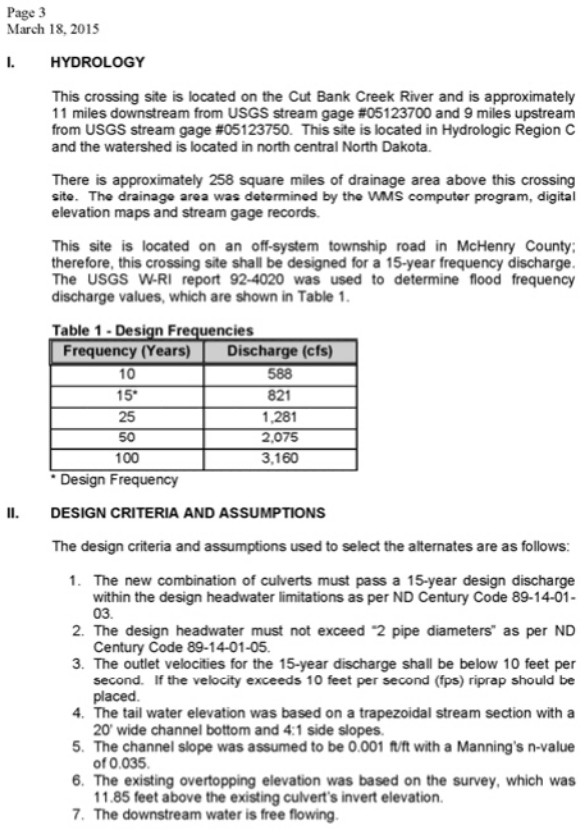
Figure 1 - Location Map

Good H&H Example Cont.



Page 3
March 18, 2015

I. HYDROLOGY

This crossing site is located on the Cut Bank Creek River and is approximately 11 miles downstream from USGS stream gage #05123700 and 9 miles upstream from USGS stream gage #05123750. This site is located in Hydrologic Region C and the watershed is located in north central North Dakota.

There is approximately 258 square miles of drainage area above this crossing site. The drainage area was determined by the WMS computer program, digital elevation maps and stream gage records.

This site is located on an off-system township road in McHenry County; therefore, this crossing site shall be designed for a 15-year frequency discharge. The USGS W-RI report 92-4020 was used to determine flood frequency discharge values, which are shown in Table 1.

Table 1 - Design Frequencies

Frequency (Years)	Discharge (cfs)
10	588
15*	821
25	1,281
50	2,075
100	3,160

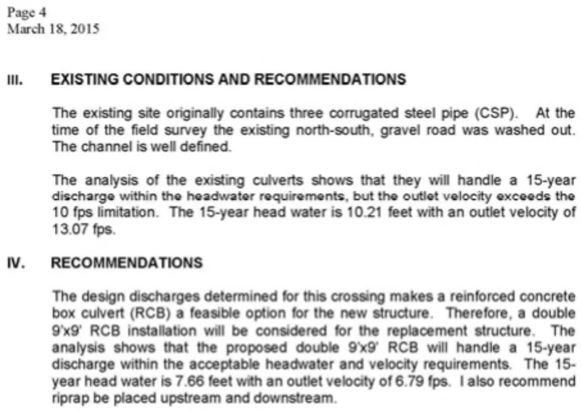
* Design Frequency

II. DESIGN CRITERIA AND ASSUMPTIONS

The design criteria and assumptions used to select the alternates are as follows:

1. The new combination of culverts must pass a 15-year design discharge within the design headwater limitations as per ND Century Code 89-14-01-03.
2. The design headwater must not exceed “2 pipe diameters” as per ND Century Code 89-14-01-05.
3. The outlet velocities for the 15-year discharge shall be below 10 feet per second. If the velocity exceeds 10 feet per second (fps) riprap should be placed.
4. The tail water elevation was based on a trapezoidal stream section with a 20’ wide channel bottom and 4:1 side slopes.
5. The channel slope was assumed to be 0.001 ft/ft with a Manning’s n-value of 0.035.
6. The existing overtopping elevation was based on the survey, which was 11.85 feet above the existing culvert’s invert elevation.
7. The downstream water is free flowing.

Good H&H Example Cont.



Page 4
March 18, 2015

III. EXISTING CONDITIONS AND RECOMMENDATIONS

The existing site originally contains three corrugated steel pipe (CSP). At the time of the field survey the existing north-south, gravel road was washed out. The channel is well defined.

The analysis of the existing culverts shows that they will handle a 15-year discharge within the headwater requirements, but the outlet velocity exceeds the 10 fps limitation. The 15-year head water is 10.21 feet with an outlet velocity of 13.07 fps.

IV. RECOMMENDATIONS

The design discharges determined for this crossing makes a reinforced concrete box culvert (RCB) a feasible option for the new structure. Therefore, a double 9'x9' RCB installation will be considered for the replacement structure. The analysis shows that the proposed double 9'x9' RCB will handle a 15-year discharge within the acceptable headwater and velocity requirements. The 15-year head water is 7.66 feet with an outlet velocity of 6.79 fps. I also recommend riprap be placed upstream and downstream.

Bad H&H

	Site 2x	36"
PW 5771	Site 3x	30"
	Site 4x	30"

Paul,

Be advised that these pipes were sized using corrugated steel, and the primary drainage areas were used to size the pipe. No impacts of the rising Devils Lake basin were addressed. Also note that the surveyors were not able to locate culverts at all sites; and the Ramsey County Water Board may need to be notified if you are adding equalization pipes that are not currently in place. If the road is acting as a dam, equalizing the water will have downstream effects. Let me know if you have any questions. I will be on my cell for the remainder of the day. Thanks.

FEMA

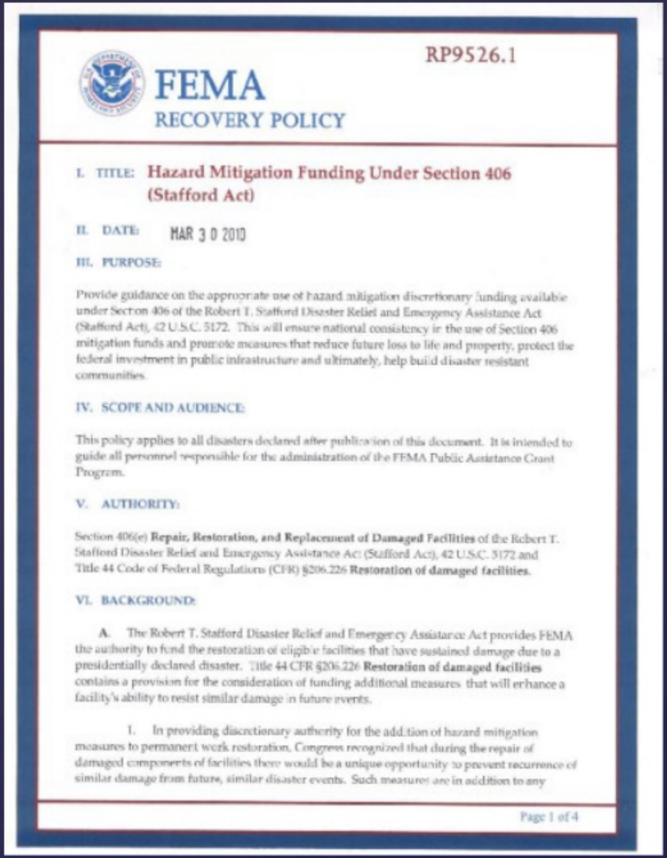
406 Mitigation Guiding Document

Recovery Policy 9526.1 is the primary guidance document used by 406 Mitigation field personnel, outlining appropriate use of hazard mitigation discretionary funding available under Section 406 of the Stafford Act.Do an internet search for FEMA Recovery Policy 9526.1.



RP9526.1

FEMA
RECOVERY POLICY

I. TITLE: **Hazard Mitigation Funding Under Section 406 (Stafford Act)**

II. DATE: MAR 3 0 2010

III. PURPOSE:

Provide guidance on the appropriate use of hazard mitigation discretionary funding available under Section 406 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), 42 U.S.C. 5172. This will ensure national consistency in the use of Section 406 mitigation funds and promote measures that reduce future loss to life and property, protect the federal investment in public infrastructure and ultimately, help build disaster resistant communities.

IV. SCOPE AND AUDIENCE:

This policy applies to all disasters declared after publication of this document. It is intended to guide all personnel responsible for the administration of the FEMA Public Assistance Grant Program.

V. AUTHORITY:

Section 406(e) **Repair, Restoration, and Replacement of Damaged Facilities** of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), 42 U.S.C. 5172 and Title 44 Code of Federal Regulations (CFR) §206.226 **Restoration of damaged facilities.**

VI. BACKGROUND:

A. The Robert T. Stafford Disaster Relief and Emergency Assistance Act provides FEMA the authority to fund the restoration of eligible facilities that have sustained damage due to a presidentially declared disaster. Title 44 CFR §206.226 **Restoration of damaged facilities** contains a provision for the consideration of funding additional measures that will enhance a facility's ability to resist similar damage in future events.

1. In providing discretionary authority for the addition of hazard mitigation measures to permanent work restoration, Congress recognized that during the repair of damaged components of facilities there would be a unique opportunity to prevent recurrence of similar damage from future, similar disaster events. Such measures are in addition to any

Page 1 of 4

How FEMA determines Eligible, Cost Effective 406 Mitigation Funding

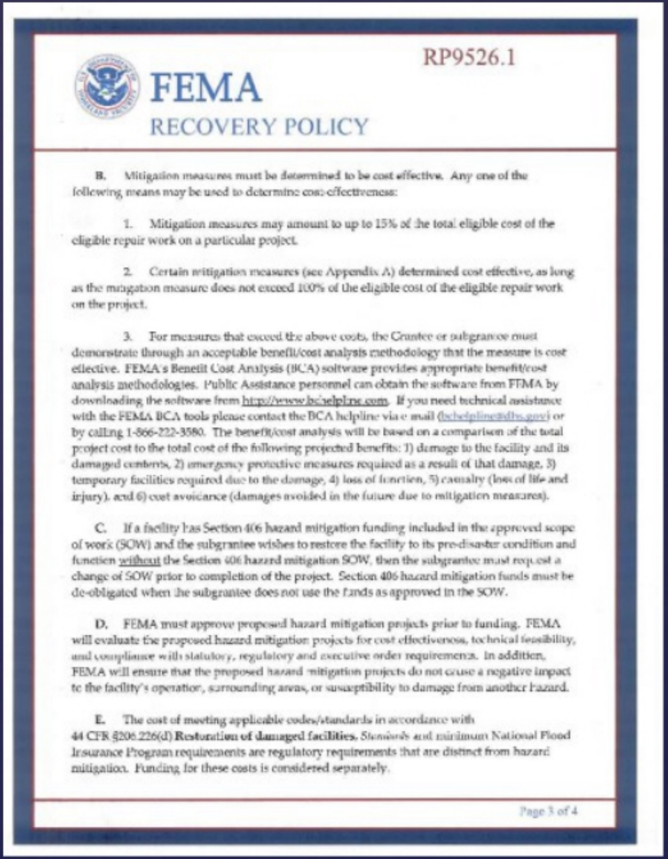
The available funding for 406 Mitigation is based on a couple of factors:The estimated cost of repair of the damaged element being mitigated.The type of mitigation being proposed (i.e. does it fall within Appendix A).Can we truly know if our 406 Mitigation proposal is cost effective until the estimated cost of repairs is completed in the Project Worksheet site sheet?

It is the responsibility of the PA Project Specialist and HM 406 Specialist (if deployed) to brief the applicant on the PA 406 Mitigation program, help identify mitigation opportunities, offer suggestions as necessary, and assist the applicant in formulating a proposal that is eligible, cost effective and technically feasible per FEMA Recovery Policy 9526.1. If there are no opportunities or none that are cost effective, it is the PA Project Specialist's responsibility to provide a written justification in the PW why there is no mitigation.

There are three ways to determine Cost Effectiveness

Based on criteria outlined in 9526.1, VII. B:

a) Mitigation measures may amount up to 15% of the total eligible cost of the eligible repair work (by site).Certain mitigation measures have been pre-determined to be cost effective, as long as the mitigation measure does not exceed 100% of the eligible cost of the eligible repair (by site). See Appendix A.A Benefit Cost Analysis may be performed for mitigation proposals that fall outside the predetermined cost effective measures.



RP9526.1

FEMA
RECOVERY POLICY

B. Mitigation measures must be determined to be cost effective. Any one of the following means may be used to determine cost-effectiveness:

1. Mitigation measures may amount to up to 15% of the total eligible cost of the eligible repair work on a particular project.

2. Certain mitigation measures (see Appendix A) determined cost effective, as long as the mitigation measure does not exceed 100% of the eligible cost of the eligible repair work on the project.

3. For measures that exceed the above costs, the Grantee or subgrantee must demonstrate through an acceptable benefit/cost analysis methodology that the measure is cost effective. FEMA's Benefit Cost Analysis (BCA) software provides appropriate benefit/cost analysis methodologies. Public Assistance personnel can obtain the software from FEMA by downloading the software from http://www.bcahelpline.com. If you need technical assistance with the FEMA BCA tools please contact the BCA helpline via e mail (bcahelpline@dhs.gov) or by calling 1-866-222-3580. The benefit/cost analysis will be based on a comparison of the total project cost to the total cost of the following projected benefits: 1) damage to the facility and its damaged contents, 2) emergency protective measures required as a result of that damage, 3) temporary facilities required due to the damage, 4) loss of function, 5) casualty (loss of life and injury), and 6) cost avoidance (damages avoided in the future due to mitigation measures).

C. If a facility has Section 406 hazard mitigation funding included in the approved scope of work (SOW) and the subgrantee wishes to restore the facility to its pre-disaster condition and function without the Section 406 hazard mitigation SOW, then the subgrantee must request a change of SOW prior to completion of the project. Section 406 hazard mitigation funds must be de-obligated when the subgrantee does not use the funds as approved in the SOW.

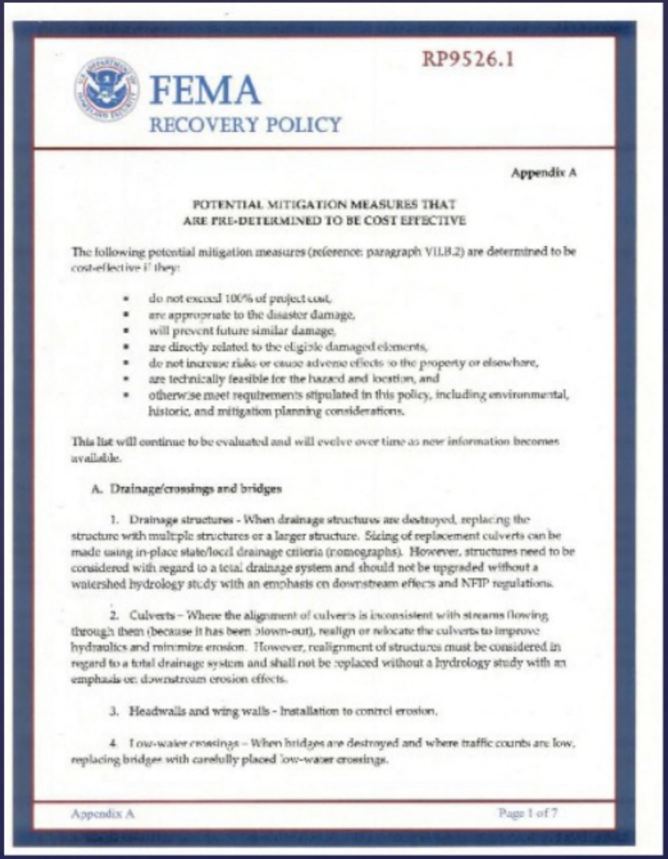
D. FEMA must approve proposed hazard mitigation projects prior to funding. FEMA will evaluate the proposed hazard mitigation projects for cost effectiveness, technical feasibility, and compliance with statutory, regulatory and executive order requirements. In addition, FEMA will ensure that the proposed hazard mitigation projects do not cause a negative impact to the facility's operation, surrounding areas, or susceptibility to damage from another hazard.

E. The cost of meeting applicable codes/standards in accordance with 44 CFR §206.226(d) **Restoration of damaged facilities.** Standards and minimum National Flood Insurance Program requirements are regulatory requirements that are distinct from hazard mitigation. Funding for these costs is considered separately.

Page 3 of 4

RP 9526.1, Appendix A:

Appendix A of 9526.1 includes criteria and seven pages of mitigation treatments that have been pre-determined to be cost effective up to 100% of the repair costs of the damaged element. It is organized by facility type.Be sure to base the 100% on the actual damage being mitigated at the facility you are treating, not the overall costs included in the Project Worksheet.



RP9526.1

FEMA
RECOVERY POLICY

Appendix A

POTENTIAL MITIGATION MEASURES THAT
ARE PRE-DETERMINED TO BE COST EFFECTIVE

The following potential mitigation measures (reference: paragraph VII.B.2) are determined to be cost-effective if they:

- do not exceed 100% of project cost,
- are appropriate to the disaster damage,
- will prevent future similar damage,
- are directly related to the eligible damaged elements,
- do not increase risks or cause adverse effects to the property or elsewhere,
- are technically feasible for the hazard and location, and
- otherwise meet requirements stipulated in this policy, including environmental, historic, and mitigation planning considerations.

This list will continue to be evaluated and will evolve over time as new information becomes available.

A. Drainage/crossings and bridges

1. Drainage structures - When drainage structures are destroyed, replacing the structure with multiple structures or a larger structure. Sizing of replacement culverts can be made using in-place state/local drainage criteria (nomographs). However, structures need to be considered with regard to a total drainage system and should not be upgraded without a watershed hydrology study with an emphasis on downstream effects and NFIP regulations.

2. Culverts – Where the alignment of culverts is inconsistent with streams flowing through them (because it has been blown-out), realign or relocate the culverts to improve hydraulics and minimize erosion. However, realignment of structures must be considered in regard to a total drainage system and shall not be replaced without a hydrology study with an emphasis on downstream erosion effects.

3. Headwalls and wing walls - Installation to control erosion.

4. Low-water crossings – When bridges are destroyed and where traffic counts are low, replacing bridges with carefully placed low-water crossings.

Appendix A Page 1 of 7

How FEMA determines Eligible, Cost Effective 406 Mitigation Funding

Benefit Cost Analysis (BCA):

When the applicant is proposing a mitigation treatment where the cost is more than 15% of the damaged element (and it's not listed in Appendix A), OR it is listed in Appendix A but the cost is over 100% of the repair, FEMA can perform a Benefit Cost Analysis to determine if the proposal is cost effective.Separate training is REQUIRED on the use of FEMA BCA software 5.0.For ND disasters, Region will provide supplemental support for development of BCAs.Items that can be included in the BCA:Category A & B costs from current and past events related to the facility being mitigated.Users of the facility where the loss of function impacts them (e.g. roads: traffic counts, treatment plants/utilities: customers).Historic damages at the site that will be mitigated and can be documented.

Calculating Cost Effectiveness:

Damage: A 24″ culvert and roadway were washed out during the event due to undersized culvert. Estimate to repair the road: $7,000. Estimate for 24″ Culvert installed: $2,500.Hazard Mitigation Proposal (HMP): Install 36″ and rip rap wing walls in place of the 24″ culvert to mitigate damage to the washed out roadway. Estimate of cost: $1,500 for rip rap + $4,000 for 36″ culvert. Minus cost of the 24″ for $ 2,500 = net cost of proposal: $3,000.Is it in Appendix A? Yes. So if technically feasible, it is potentially eligible up to 100% of the damage being mitigated.What is the damage being mitigated? $7,000 + $2,500 = $9,500.HMP: $3,000 (numerator) / $9,500 (denominator) = 31.6% of the repair cost.

FEMA

Common misconceptions interpreting 9526.1

- All 406 Hazard Mitigation proposals are eligible up to 100% of the damaged element.No: Only those items listed on 9526.1, Appendix A have been predetermined to be cost effective up to 100% of the cost of repair.All Mitigation in an Engineered project is eligible for 406 FundingNo: Only damaged elements are eligible for 406 Mitigation funding which can be determined to be cost effective.Codes & Standards (see 44 CFR, 206.226 (d))Improved Project (see page 4, H. of 9526.1)The cost basis for eligible 406 funding is based on the overall Project Worksheet $ amount.No: The cost basis for eligible funding is based on the estimate of repairs for the site/element being mitigated, not the PW. A PW may have up to 50 sites.

Common misconceptions interpreting 9526.1 (continued)

- 406 Mitigation proposals must be an integral part of the damaged element.No: In some instances, an eligible mitigation measure may not be part of the damaged facility. FEMA will consider these exceptions on a case by case basis.406 Mitigation funds may not be applied to an Improved Project.No: Funds recommended for mitigation measures may be approved for an improved project if the original facility and its function will be restored and the mitigation work is still needed, is technically feasible, and will be performed as part of the overall project.Any proposal less than 15% of the damages is eligible 406 Mitigation.No: The mitigation proposal must directly reduce the potential of future, similar disaster damages to the eligible facility. The Hazard Mitigation Proposal (HMP) has several elements that need to be articulated in writing, including why/how it will work.

Common misconceptions interpreting 9526.1 (continued)

- If the mitigation was installed prior to FEMA site visit, it is ineligible.No: If the repair is eligible for FEMA reimbursement under Work Completed and the mitigation is eligible and cost effective per RP 9526.1, the mitigation work is potentially eligible for reimbursement. An HMP for that work should be written that outlines eligibility and cost effectiveness.A Reinforced Concrete Pipe (RCP) is the hydraulic equivalent of a same size Corrugated Metal Pipe (CMP).No. Installing a same size CMP in place of a RCP can significantly reduce hydraulic capacity. If the State DOT cannot provide a hydraulic equivalent table when switching from RCP to CMP, an H&H should be performed to insure adequate capacity.

Common misconceptions interpreting 9526.1 (continued)

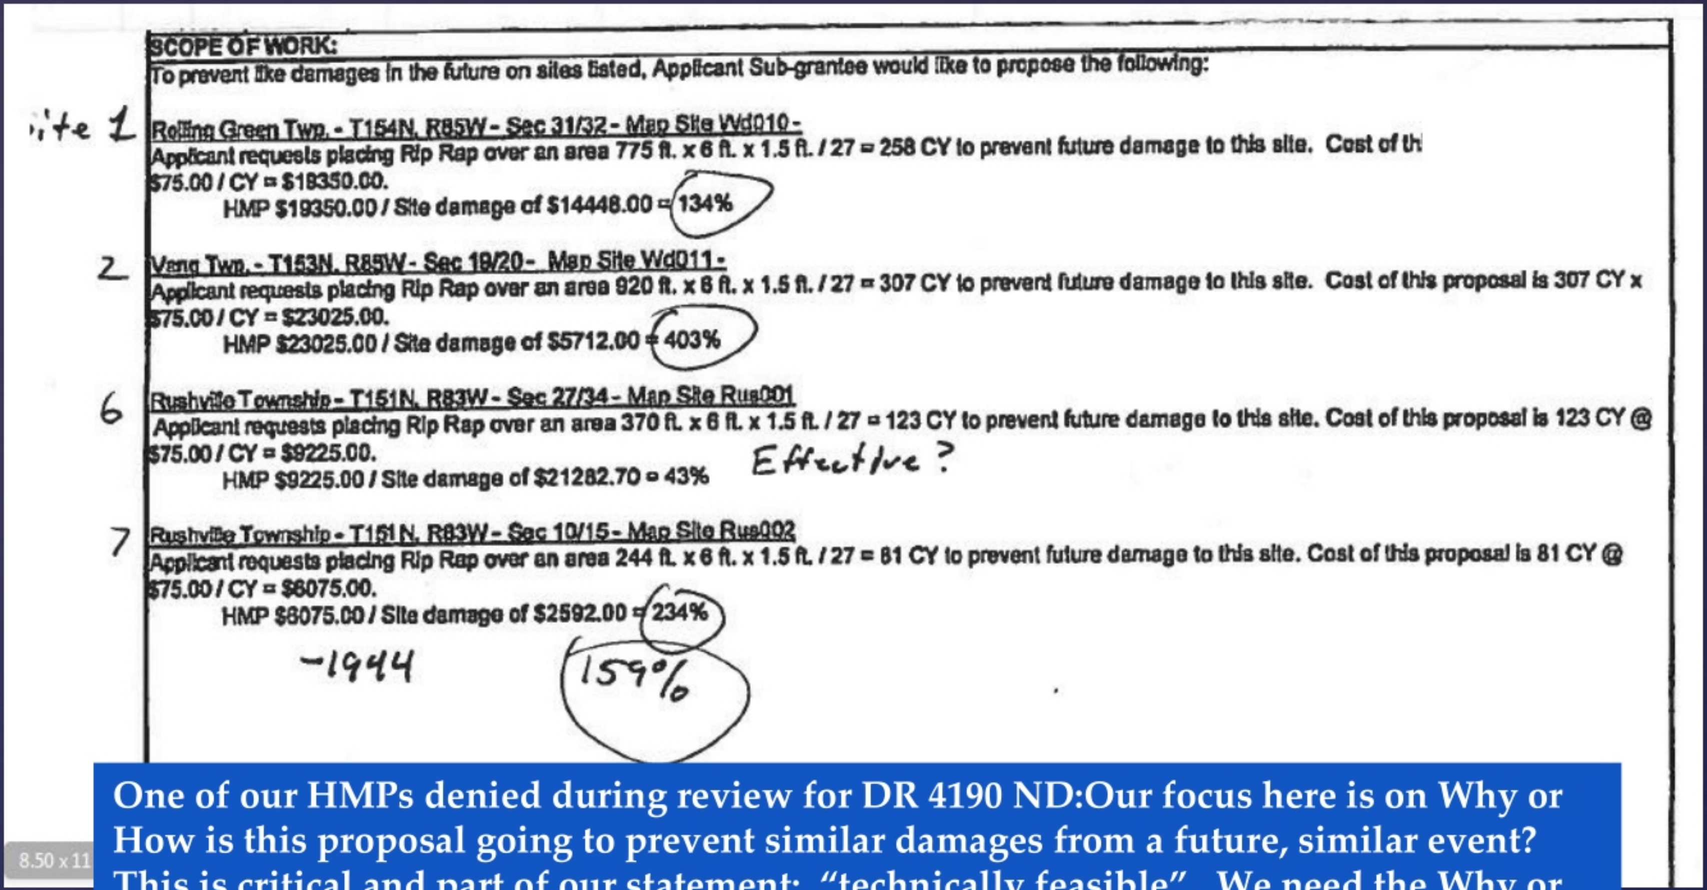
- If the permanent work is complete, add on 406 mitigation is not eligible.No: There are two types of eligible, “add on” 406 Mitigation. If the proposed 406 Mitigation will not impact the previously complete permanent work (i.e. don’t have to tear something out that was paid for on the PW), is cost effective and technically feasible, it is eligible. If the previously complete permanent work was completed during emergency response, and could be considered Emergency Protective measures, 406 Mitigation may be eligible at the site. The 406 Mitigation should be cost effective and technically feasible. These types of sites will be considered on a case by case basis. Additional write ups to separate the emergency work from permanent repairs may be necessary.

Writing Hazard Mitigation Proposals (HMPs)

There are a minimum of five parts to the Hazard Mitigation Proposal. If there are special considerations such as upsizing a culvert or a proposal that needs to be designed by a licensed engineer, additional language is required:Brief description (1-2 sentences) of the damage and the cause.Detailed description of the proposed scope of work.Brief description of WHY (or HOW) the proposed mitigation will reduce similar damages during future, similar events.Cost estimate and ratio calculation (HMP/'cost to restore to predisaster').9526.1 policy reference as to why the project is eligible (a 'cut & paste' template with boilerplate language is available to all staff).Insert Special Considerations comments, as necessary.

FEMA

Lessons Learned from DR 4190 ND



SCOPE OF WORK:

To prevent like damages in the future on sites listed, Applicant Sub-grantee would like to propose the following:

ite 1 Rolling Green Twp. - T154N, R85W - Sec 31/32 - Map Site Wd010 -
Applicant requests placing Rip Rap over an area 775 ft. x 6 ft. x 1.5 ft. / 27 = 258 CY to prevent future damage to this site. Cost of th
$75.00 / CY = $19350.00.
HMP $19350.00 / Site damage of $14448.00 = 134%

2 Veng Twp. - T153N, R85W - Sec 19/20 - Map Site Wd011 -
Applicant requests placing Rip Rap over an area 920 ft. x 6 ft. x 1.5 ft. / 27 = 307 CY to prevent future damage to this site. Cost of this proposal is 307 CY x
$75.00 / CY = $23025.00.
HMP $23025.00 / Site damage of $5712.00 = 403%

6 Rushville Township - T151N, R83W - Sec 27/34 - Map Site Rus001
Applicant requests placing Rip Rap over an area 370 ft. x 6 ft. x 1.5 ft. / 27 = 123 CY to prevent future damage to this site. Cost of this proposal is 123 CY @
$75.00 / CY = $9225.00.
HMP $9225.00 / Site damage of $21282.70 = 43% Effective?

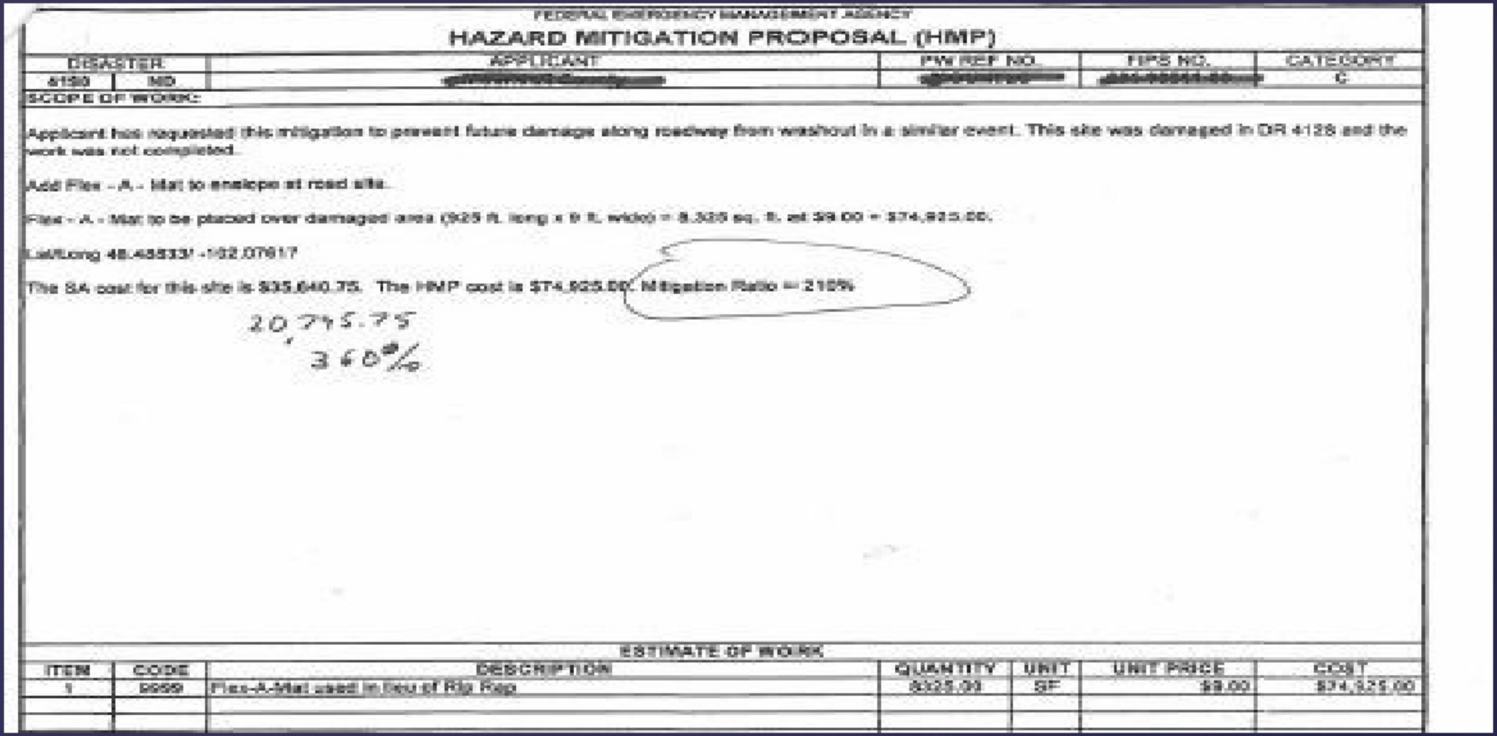
7 Rushville Township - T151N, R83W - Sec 10/15 - Map Site Rus002
Applicant requests placing Rip Rap over an area 244 ft. x 6 ft. x 1.5 ft. / 27 = 81 CY to prevent future damage to this site. Cost of this proposal is 81 CY @
$75.00 / CY = $6075.00.
HMP $6075.00 / Site damage of $2592.00 = 234%

-1944

159%

One of our HMPs denied during review for DR 4190 ND:Our focus here is on Why or How is this proposal going to prevent similar damages from a future, similar event? This is critical and part of our statement: "technically feasible". We need the Why or How statement.

Lessons Learned from DR 4190 ND



FEDERAL EMERGENCY MANAGEMENT AGENCY

HAZARD MITIGATION PROPOSAL (HMP)

DISASTER		APPLICANT	PW REF NO.	FIPS NO.	CATEGORY
4190	ND	[redacted]	[redacted]	[redacted]	C

SCOPE OF WORK:

Applicant has requested this mitigation to prevent future damage along roadway from washout in a similar event. This site was damaged in DR 4128 and the work was not completed.

Add Flex - A - Mat to enslope at road site.

Flex - A - Mat to be placed over damaged area (925 ft. long x 9 ft. wide) = 8,325 sq. ft. at $9.00 = $74,925.00.

Lat/Long 48.48833/ -102.07617

The SA cost for this site is $35,640.75. The HMP cost is $74,925.00. Mitigation Ratio = 210%

20,745.75
360%

ESTIMATE OF WORK

ITEM	CODE	DESCRIPTION	QUANTITY	UNIT	UNIT PRICE	COST
1	9999	Flex-A-Mat used in lieu of Rip Rap	8325.00	SF	$9.00	$74,925.00

Another HMPs denied during review for DR 4190 ND:The PW identified that a BCA was needed. The Project Specialist can start to collect critical BCA inputs at the time of project formulation to assist the applicant in getting a successful BCA.

FEMA

FEMA Policy/Program Updates: Sandy Act

NOTE: Version 2 (December 19, 2013).Mitigation (page 16) …In an effort to promote greater flexibility in the use of funds after accepting a fixed grant and allow more resilient mitigation with the alternative procedures authorized under Section 428, FEMA may allow the retention of 406 mitigation funds in the aforementioned circumstances on a case-by-case basis where prevention of future similar damage is proven to be of greater or equal benefit than that which would have been achieved with the approved mitigation scope of work in the agreed upon fixed subgrant(s).

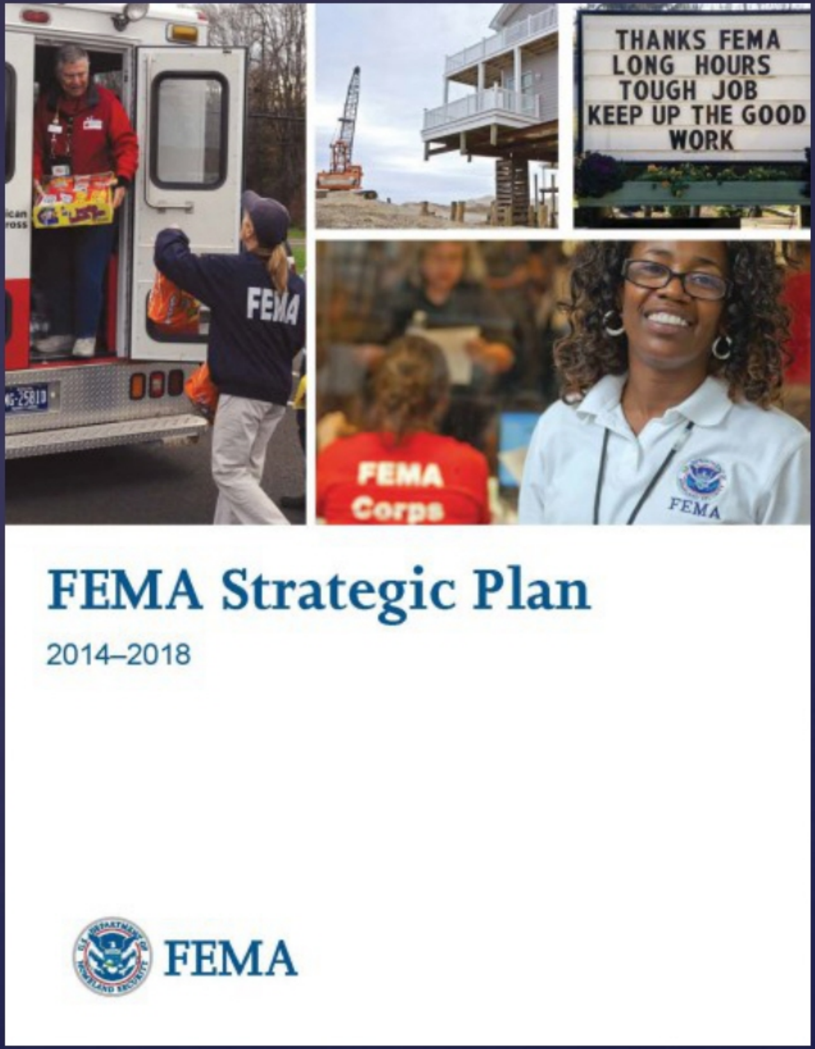
December 19, 2013

FEMA

Federal Emergency Management Agency
Department of Homeland Security
500 C Street, S.W.
Washington, DC 20472

FEMA Policy/Program Updates: FEMA Strategic Plan

(pp. 32-33): Although FEMA has a number of pre- and postdisaster programs that support and encourage resilient building practices, the Agency will pursue improvements to increase the effectiveness of these programs in incentivizing risk reduction. For example, FEMA will better synchronize hazard mitigation opportunities authorized under Sections 404 and 406 of the Stafford Act to increase accessibility and improve the outcomes of these programs.Strategy 4.2.1: Align the 404 and 406 mitigation programs to assist communities in managing current and future risk.



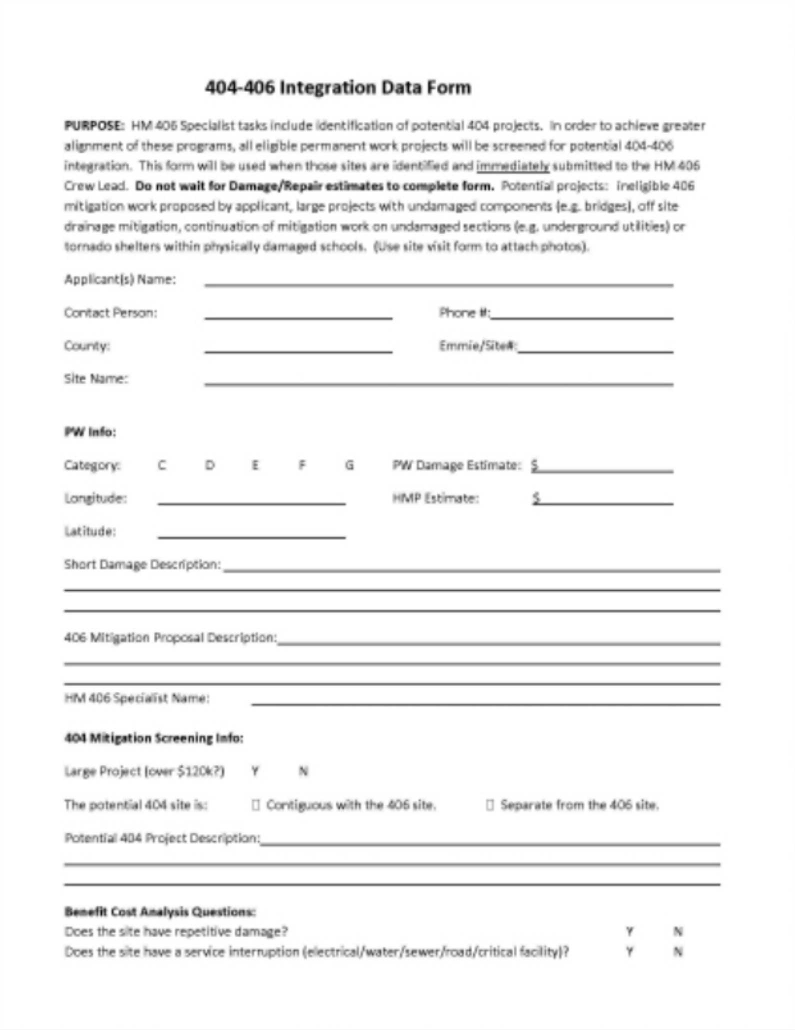
FEMA Strategic Plan

2014–2018

FEMA

FEMA Policy/Program Updates: FEMA Strategic Plan

CRITICAL PATH FOR 404-406 ALIGNMENT:To be completed by Field Staff: PA Project Specialists/HM 406 Specialists:Identification (404-406 Integration Data Form filled out). See attached form. To be completed by FEMA Regional or DR Staff:2) Evaluation.Collaboration: FEMA HMGP Specialist/Engineers, State Review Team & Local Officials.Development: 404 project proposal development, 406 synchronization and EHP consultation.Approval, execution and closeout.Identification: If there are no HM 406 Specialists in attendance at kickoff meetings/site visits, it is the PA Project Specialist's responsibility to identify 404-406 alignment potential and filling out data form.



404-406 Integration Data Form

PURPOSE: HM 406 Specialist tasks include identification of potential 404 projects. In order to achieve greater alignment of these programs, all eligible permanent work projects will be screened for potential 404-406 integration. This form will be used when those sites are identified and immediately submitted to the HM 406 Crew Lead. **Do not wait for Damage/Repair estimates to complete form.** Potential projects: ineligible 406 mitigation work proposed by applicant, large projects with undamaged components (e.g. bridges), off site drainage mitigation, continuation of mitigation work on undamaged sections (e.g. underground utilities) or tornado shelters within physically damaged schools. (Use site visit form to attach photos).

Applicant(s) Name: ____________________

Contact Person: ____________________ Phone #: ____________________

County: ____________________ Emmie/Site#: ____________________

Site Name: ____________________

PW Info:

Category: C D E F G PW Damage Estimate: $____________

Latitude: ____________________

Short Damage Description: ____________________

406 Mitigation Proposal Description: ____________________

HM 406 Specialist Name: ____________________

404 Mitigation Screening Info:

Large Project (over $120k?) Y N

The potential 404 site is: ☐ Contiguous with the 406 site. ☐ Separate from the 406 site.

Potential 404 Project Description: ____________________

Benefit Cost Analysis Questions:

Does the site have repetitive damage? Y N

Does the site have a service interruption (electrical/water/sewer/road/critical facility)? Y N

Special Considerations: Culvert Replacement/Upsize

Percent Change in culvert discharge when switching from a Reinforced Concrete Culvert (RCP) to a Corrugated Metal Pipe (CMP)of the same diameter (Assumptions: HW + $S_O L$ = 4′, Pipe Length(L) = 50′, culvert in outlet control):

Diameter	**RCP Flow Q RCP**	**CMP Flow Q CMP**	**Ratio Q CMP/Q RCP**	**Flow Change**
12 IN	7 CFS	4.3 CFS	4.3/7 = 0.61	- 39%
15	11	6.8	6.8/11 = 0.62	- 38%
18	16.4	10.0	10/16.4 = 0.61	- 39%
21	22.2	14.4	14.4/22.2 = 0.65	- 35%

(Courtesy Paul Mitchell, FEMA Reservist, 6/27/2013)

FEMA

Summary

- Recovery Policy 9526.1 is the primary guiding document for determining eligibility and cost effectiveness. A scope of damage and the estimated repair (BY SITE) are needed to develop a 406 Mitigation proposal and the cost basis for determining the cost effectiveness of Hazard Mitigation Proposals (HMPs).The written Hazard Mitigation Proposal should include several items, including WHAT caused the damage and WHY the mitigation proposal will work.All Public Assistance and Hazard Mitigation Staff should be aware of new Policies (PA Alternate Procedures) and Strategic Plans (Alignment of 406-404 programs to minimize future risk) and what they entail in order to adequately deliver program benefits.For flood events, Staff should be mindful of negative impacts of replacing reinforced concrete pipe with same size corrugated metal pipe (Get an H&H Study).

Projects that match your search criteria are listed below. To select a project, check the radio button below the *Select* column. When you are finished, click the *Select Project* button.

Displaying 1-15 of 15

Select	Category	Project Number	Project Title	Project Description
○	C	301	Gravel Road Washout	Roadway surface was washed-out by floodwaters. Replace lost fill and surface aggregate. Grade and shape roadway and shoulders. Clean and shape ditches.
○	C	302	Gravel and Road Embankment Failure	Disaster caused embankment failure and loss of road material. Replace eroded material to original profile. Repair road surface to pre-disaster design.
○	C	303	Chip and Seal Failure	Chip and seal oil surface was damaged by floodwaters. Scarify surface, backfill embankment. Replace base course, grade and shape. Replace chip and seal surface
○	C	304	Bituminous Surface and Embankment Failure	Pavement has washed out and failed. Subgrade and ditches scoured. Remove and replace damaged pavement and vase course and replace lost embankment. Regrade ditch sections.
○	C	305	Road and Culvert Washout	Flood damage to road surface, culvert and ditches. Replace lost aggregate surface material, install new culvert and regrade surface and ditches. The culvert unit price includes excavation and backfill except where the road washout is extensive.
○	C	306	Concrete Box Culvert Replacement	High velocity flow destroyed concrete box culvert. Replace structure to pre-disaster design. The applicant should request a supplemental inspection if codes require a larger structure.
○	C	307	Stream Crossing Approach Road Washout	High water has washed out the approaches to a stream crossing including the loss of surface material and RIP RAP base and left mud and debris. Remove debris and replace lost embankment, road surface material and RIP-RAP.
○	C	308	Timber Wing Walls	Bridge abutments were undermined and wing wall and existing RIP RAP washed out. Repair behind abutments with aggregate fill, rebuild slopes, abutments and wing walls and replace RIP RAP protection.
○	C	309	Curb, Gutter and Sidewalk Replacement	Curbs, gutters, and sidewalks were damaged by uprooted trees and/or construction equipment. Remove and replace damaged sections.
○	C	310	Bridge Replacement	Floodwaters caused extensive damage to bridge making repair of structure infeasible. Replace bridge and repair approach roads and appurtenances to restore facilty to pre-disaster design and capacity based on current applicable codes.
○	C	311	Road Washout	(1) Roadway surface was washed out by floodwaters. (2) Replace lost fill. (3) Replace lost aggregate material. (4) Grade & shape roadway and shoulders. (5) Clean & shape ditches. (6) Other (specify) - replace
○	C	312	Embankment Failure at Roads, Bridges and Culverts	Disaster caused embankment failure. Replace eroded material to original profile.
○	C	313	Road Washout at Bridge or Culvert	Flood damage to road surface and embankment. Replace road surface material and eroded embankment.
○	C	314	Erosion of Roadway Embankment	Floodwaters caused erosion of traveled way, slopes and shoulders, replace with fill material to pre-disaster profile.
○	C	399	Road System Damage

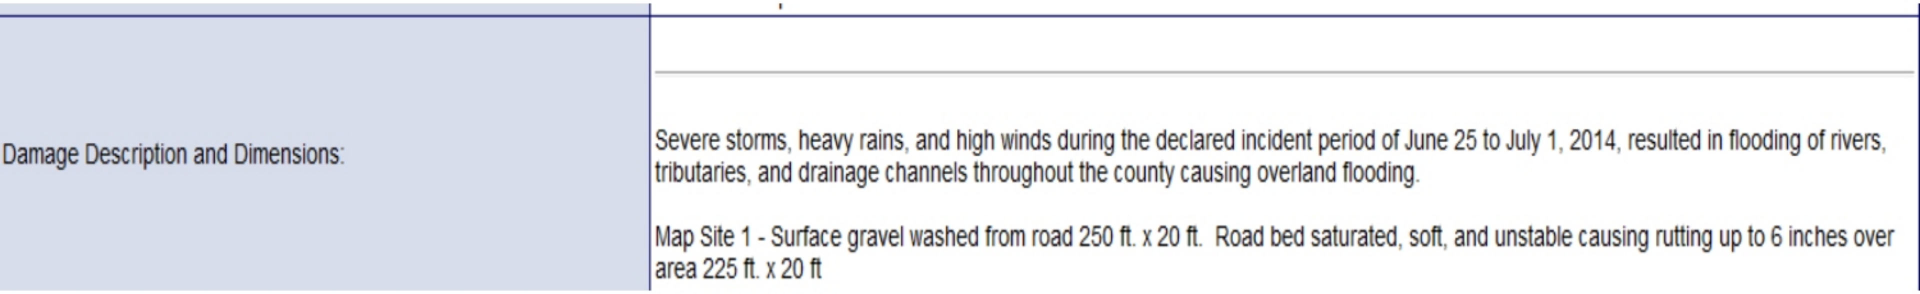
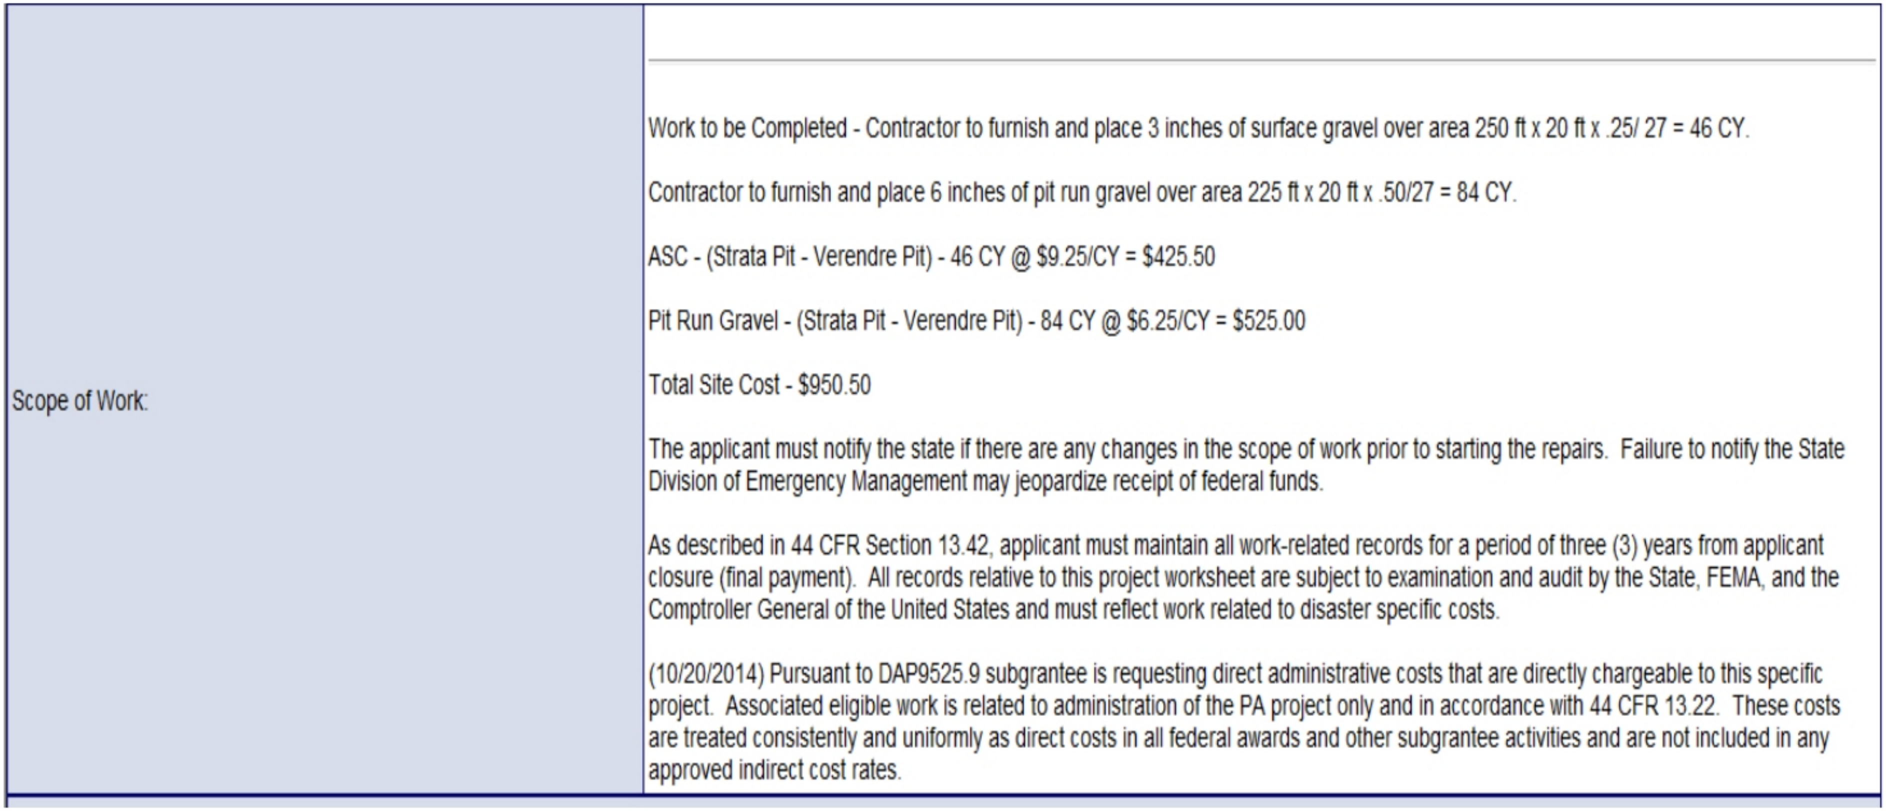
Damage Facility – Continued - DDD



Damage Description and Dimensions:	Severe storms, heavy rains, and high winds during the declared incident period of June 25 to July 1, 2014, resulted in flooding of rivers, tributaries, and drainage channels throughout the county causing overland flooding. Map Site 1 - Surface gravel washed from road 250 ft. x 20 ft. Road bed saturated, soft, and unstable causing rutting up to 6 inches over area 225 ft. x 20 ft

Detailed description of damage to facility. Include information on cause of damage. Detailed information on damag

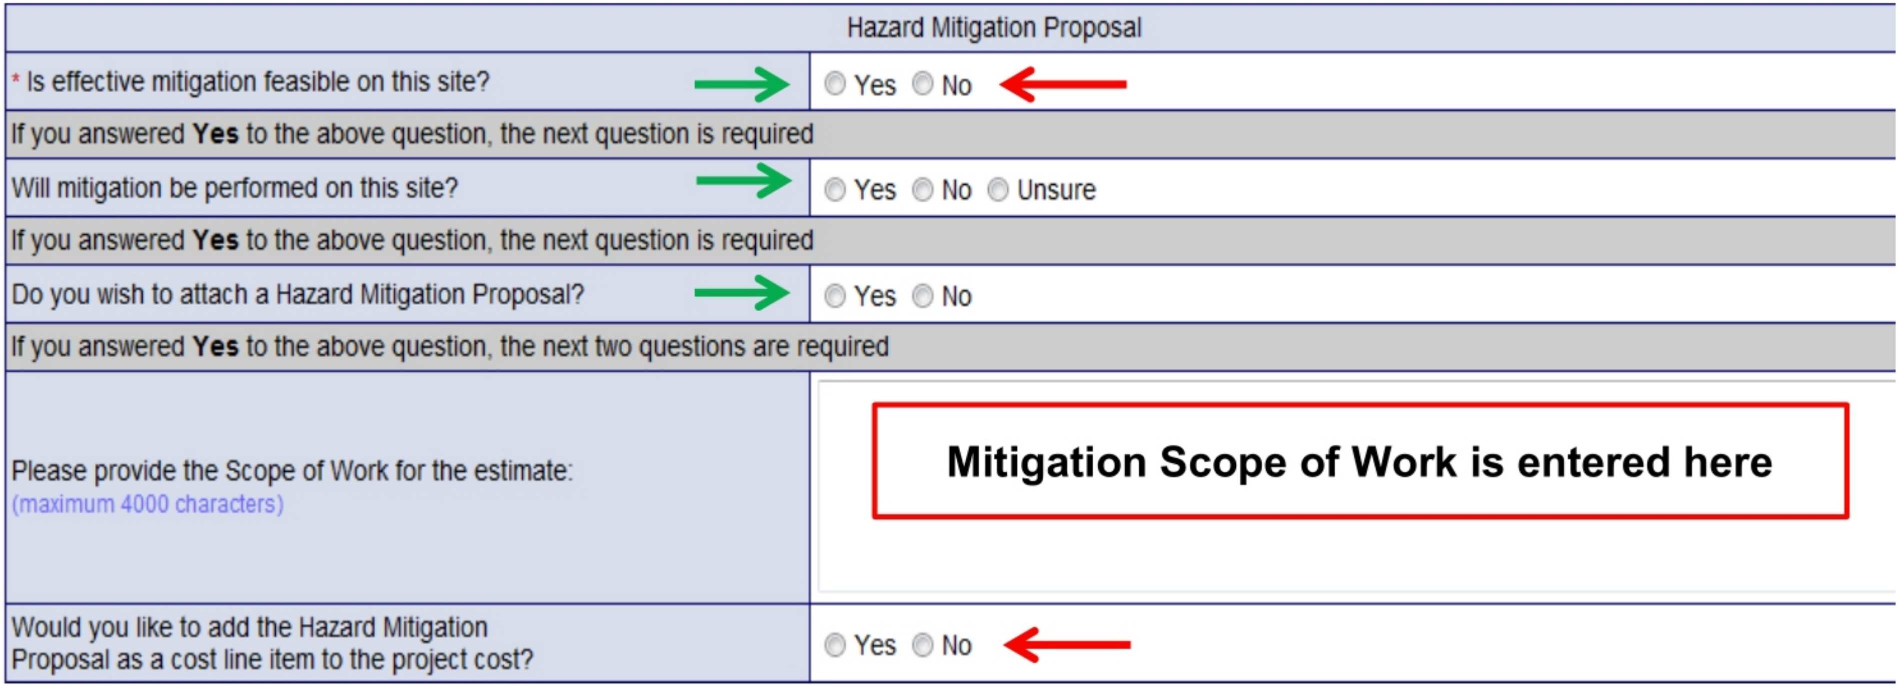
Damage Facility – Continued - Scope of Work



Scope of Work:	Work to be Completed - Contractor to furnish and place 3 inches of surface gravel over area 250 ft x 20 ft x .25/ 27 = 46 CY. Contractor to furnish and place 6 inches of pit run gravel over area 225 ft x 20 ft x .50/27 = 84 CY. ASC - (Strata Pit - Verendre Pit) - 46 CY @ $9.25/CY = $425.50 Pit Run Gravel - (Strata Pit - Verendre Pit) - 84 CY @ $6.25/CY = $525.00 Total Site Cost - $950.50 The applicant must notify the state if there are any changes in the scope of work prior to starting the repairs. Failure to notify the State Division of Emergency Management may jeopardize receipt of federal funds. As described in 44 CFR Section 13.42, applicant must maintain all work-related records for a period of three (3) years from applicant closure (final payment). All records relative to this project worksheet are subject to examination and audit by the State, FEMA, and the Comptroller General of the United States and must reflect work related to disaster specific costs. (10/20/2014) Pursuant to DAP9525.9 subgrantee is requesting direct administrative costs that are directly chargeable to this specific project. Associated eligible work is related to administration of the PA project only and in accordance with 44 CFR 13.22. These costs are treated consistently and uniformly as direct costs in all federal awards and other subgrantee activities and are not included in any approved indirect cost rates.

- **Detail Work Completed and Work to be Completed separately. Detailed information on work effort, who has or will perform work,Type of repair, quantities of materials, types of materials, (When using inches spell out inches do not use inEffort required to reduce or eliminate threatStandard Comments will be provided**

Damage Facility – Continued - Mitigation



Hazard Mitigation Proposal	
* Is effective mitigation feasible on this site?	○ Yes ○ No
If you answered **Yes** to the above question, the next question is required	
Will mitigation be performed on this site?	○ Yes ○ No ○ Unsure
If you answered **Yes** to the above question, the next question is required	
Do you wish to attach a Hazard Mitigation Proposal?	○ Yes ○ No
If you answered **Yes** to the above question, the next two questions are required	
Please provide the Scope of Work for the estimate: (maximum 4000 characters)	**Mitigation Scope of Work is entered here**
Would you like to add the Hazard Mitigation Proposal as a cost line item to the project cost?	○ Yes ○ No

- **If you do NOT have mitigation click "No" in the first box only – you do NOT have to fill in any of the rest of the boxes If you DO have mitigation – Click "YES" for the first 3 boxes – add your Scope of Work and click "No" for the last box – the mitigation reviewer will click yes when he reviews the PW.Costs for mitigation for a single damage facility will be added at the Cost SectionCosts for multiple damage facilities will be entered at the individual damage facility level**

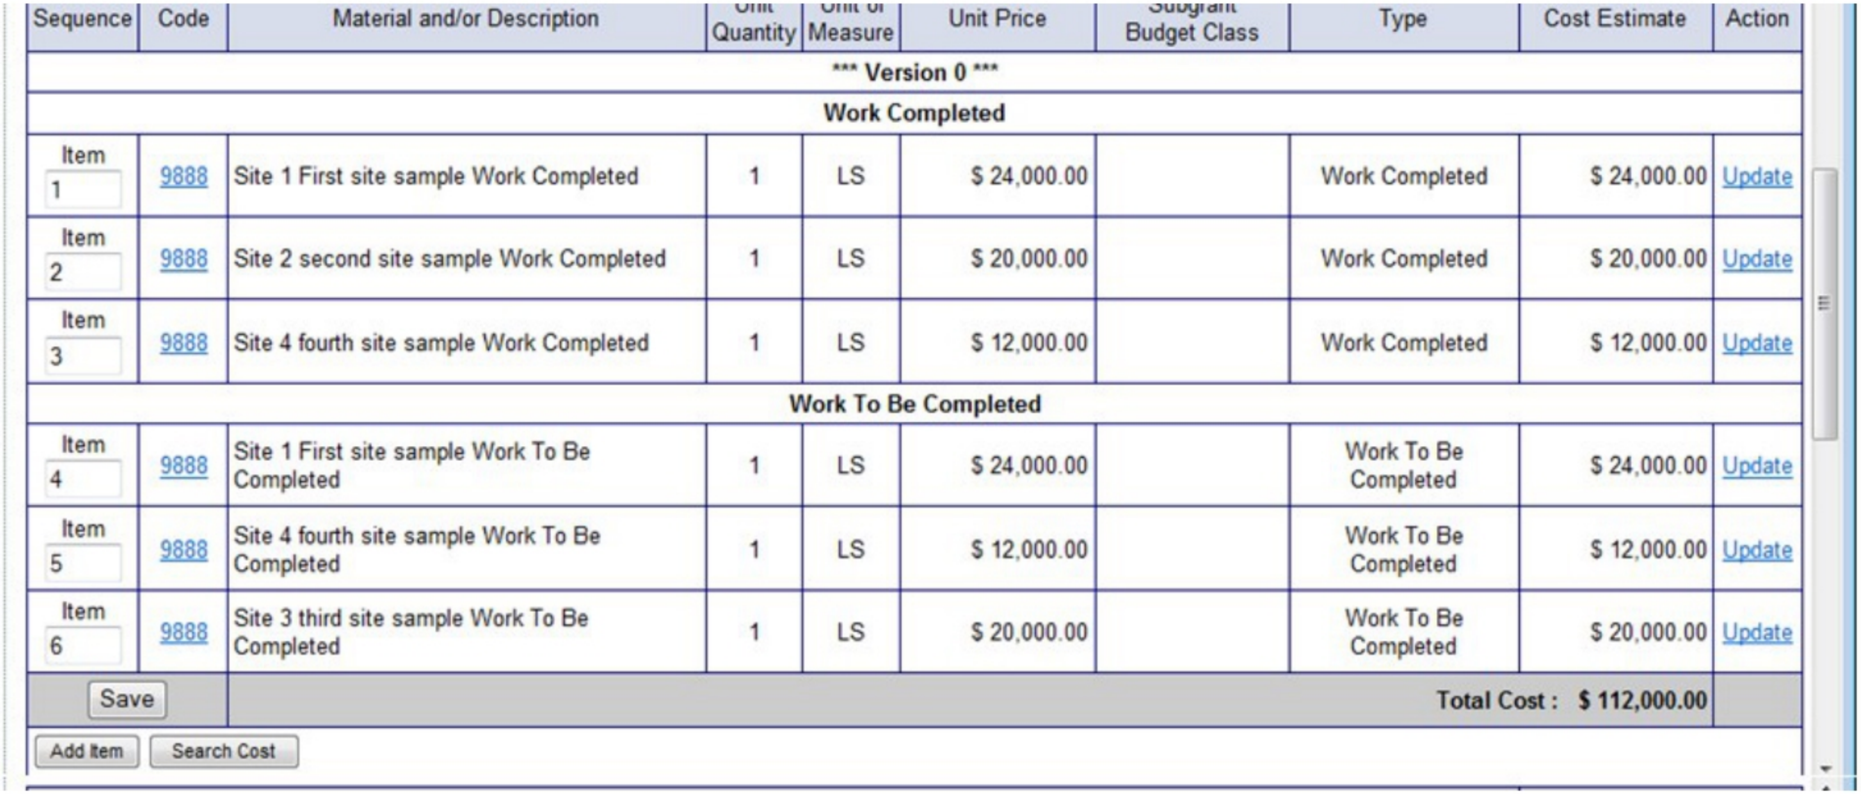
Damage Facility – Project Costs

There are 2 ways project costs can be added in EMMIE: Procedures are the Same for BothAt the Individual Damage Facility – this one will be used when you have multiple damage facilitiesOn the Cost Estimate Section – When you only have 1 damage facilityIt also works well when you have mitigation on multiple sites as the mitigation costs are then added at the site level rather than as a wholeWhen you have multiple sites and add the cost per site, the total costs will roll up to the Cost Estimate Section as a 9888 number (See Below)



Sequence	Code	Material and/or Description	Unit Quantity	Unit of Measure	Unit Price	Subgrant Budget Class	Type	Cost Estimate	Action
*** Version 0 ***									
Work Completed									
Item 1	9888	Site 1 First site sample Work Completed	1	LS	$ 24,000.00		Work Completed	$ 24,000.00	Update
Item 2	9888	Site 2 second site sample Work Completed	1	LS	$ 20,000.00		Work Completed	$ 20,000.00	Update
Item 3	9888	Site 4 fourth site sample Work Completed	1	LS	$ 12,000.00		Work Completed	$ 12,000.00	Update
Work To Be Completed									
Item 4	9888	Site 1 First site sample Work To Be Completed	1	LS	$ 24,000.00		Work To Be Completed	$ 24,000.00	Update
Item 5	9888	Site 4 fourth site sample Work To Be Completed	1	LS	$ 12,000.00		Work To Be Completed	$ 12,000.00	Update

Subject: BLUF - Standing Rock Sioux Tribal protests

Dear Ms. Zimmerman, Mr. Coen and Mr. Gruber

On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census).

Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site. As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol. State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.

Cc: Greff, Stacie <Stacie.Greff@fema.dhs.gov>
Subject: RE: Standing Rock

Hi Milo and Rocky -

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);
â€¢ Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
â€¢ The concern is that the pipeline will contaminate water.
â€¢ The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
â€¢ As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
â€¢ This is not the Keystone XL Pipeline, this the Bakken Pipeline.
â€¢ The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):
â€¢ There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.

â€¢ The Tribal Chairman has called for peaceful protest and prayer.
â€¢ The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
â€¢ The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
â€¢ The Tribe did put out a notice for donations.
â€¢ The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
â€¢ The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
â€¢ The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
â€¢ Dakota Access has filed suit against the protestors for preventing them from working.
â€¢ The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.
â€¢ September 9-11, the annual International United Tribes Powwow is scheduled to occur in Bismarck, ND, which normally draws approximately 5,000 persons. Due to the protest they expect it could draw up to 15,000. The theme of this yearâ€™s Powwow is Empowerment Though Unity.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

Thanks

Megan Floyd

Subject: ND pipeline protest update

Hi All,

I just wanted to make sure you're aware of this:

Governor issues emergency declaration in response to pipeline protests

CAROLINE GRUESKIN Bismarck Tribune

Updated Aug 19, 2016

North Dakota Gov. Jack Dalrymple issued an emergency declaration for southwest and south central North Dakota in response to protests against the Dakota Access Pipeline near Cannon Ball.

The declaration starts a process by which state agencies can get additional funding, said Greg Wilz, director of the Homeland Security Division of the state Department of Emergency Services.

Dalrymple said in the declaration that the state is committed to protecting the right to lawful protests, but recent events have created a "significant public safety concern."

The protests have grown substantially over the past week as about 1,500 people have gathered to demonstrate against the pipeline being drilled under the Missouri River. Large campsites have been established for the protesters. Twenty-nine people have been arrested during the demonstrations.

The Morton County Sheriff's Department has been the central law enforcement agency involved in monitoring the protests, but several state agencies have gotten involved.

North Dakota Highway Patrol has sent officers to the protest site, Wilz said. The health department has provided portable water trailers and a medical trailer at the protest camp. The transportation department has assisted with the road detour on Highway 1806 and put up barriers and signage.

Wilz said he will be looking at funding requests from the agencies, make an estimate and ask the emergency commission for an appropriation. The commission can authorize emergency services to get a loan from the Bank of North Dakota.

He estimated the additional resources could cost from $750,000 to $1 million, if the protests continue for the next few weeks.

The declaration also means an emergency operations center will be set up in the emergency services building, so that the agencies can coordinate their resources, Wilz said.

The money does not funnel directly into the local agencies, such as the Morton County Sheriff's Department. Rather, it reimburses the state agencies that provide personnel and material resources to local authorities.

Morton County declared its own state of emergency on Monday, for the purpose of tapping into its emergency fund and creating public awareness, said Cody Schulz, chairman of the county commission.

Schulz said the biggest expense for the county has been law enforcement, including overtime for the sheriff's deputies and assistance from other agencies, including the Mandan Police and the Cass and Mercer County Sheriffs.

The governor's emergency order does not include activation of the National Guard.

Respectfully,

Lamont Hudson

Shawn

I'm sharing with you a power point provided by ND Emergency Management Director, Greg Wilz. He asked me to facilitate a conference call with the other R8 state directors to discuss potential EMAC requests. In preparation for the meeting, he provided this update; it is a large file and took approximately 10 minutes to download. You may already know much or all of this but I thought it was a nice rollup.

He has asked to keep distribution to FOUO.

Please let me know if you have any questions.

Regards, Nancy

Region 8 Directors,

I am hoping this all work. Below is a link to a state of North Dakota secure file transfer site. The file is about 190 meg so it was too large to send regular email. It is a briefing that will help explain what is going on in North Dakota. We are providing it all states that have inquired about what is the risk of sending LEO to North Dakota based on our EMAC.

The complete situation here on the ground is very complex almost unbelievable unless you have been here since the beginning. What has started as peaceful protest by concerned citizens and Tribal members has grown to situation that is at times out of control with recent actions bordering on terrorism with state, national , and international implications.

I look forward to talking to you all this morning. If the file transfer works and you get a chance to look at it before the conference call that would be great.

Greg

You can download the file using the following link:

Subject: RE: Invitation to Download a File

Good Morning Nancy,
In response to a Request for Information (RFI) from the NPPD Chief of Staff asking about potential impacts and private sector coordination related to the recent pipeline incidents, our Office of Cyber and Infrastructure Analysis provided the response below. That has been combined with a brief summary of some of the outreach our Protective Security Advisors in the area have done. I am in DC this week, but both Scott Behunin and I are available via email and phone should you or your team need anything from us.

Thank you,
Shawn

Subject: RFI - Potential Long-Term Impacts to Disruption of Pipelines

The Office of Cyber and Infrastructure Analysis (OCIA) assesses that there will be minimal short-term and no long-term damages and/or impacts to the Oil and Natural Gas Subsector stemming from the recent incidents in which activists closed a mainline valve on the Express Pipeline in Eagle Butte, MT and other valves on pipelines which belong to Enbridge in Minnesota and Trans-Canada in North Dakota. SCADA systems belonging to these pipelines notify operators about interruptions which results in a timely dispatch of crews to restore the flow thus mitigating any significant delay in the delivery of product. Further security personnel will likely be dispatched to the site to further deter any more actions by the part of activists. All of the targeted pipelines are fully operational.

DOT regulations require operators to have protection in place to prevent tampering with chain link fences and locks. DOT PHMSA is drafting a Safety Advisory Bulletin to publish for pipeline operators.

An RFI was produced by OCIA and pushed out to the North Dakota State and Local Intelligence Center by the ND PSA. The PSA has been in contact with utility companies (Montana Dakota Utilities; MinnKota; and Otter Tail) to help maintain their awareness of the ongoing situation. Contact information has been gathered for all the major energy stakeholders in the state for communications purposes.

Shawn

I'm sharing with you a power point provided by ND Emergency Management Director, Greg Wilz. He asked me to facilitate a conference call with the other R8 state directors to discuss potential EMAC requests. In preparation for the meeting, he provided this update; it is a large file and took approximately 10 minutes to download. You may already know much or all of this but I thought it was a nice rollup.

He has asked to keep distribution to FOUO.

Please let me know if you have any questions.

Regards, Nancy

Nancy J. Dragani

Region 8 Directors,

I am hoping this all work. Below is a link to a state of North Dakota secure file transfer site. The file is about 190 meg so it was too large to send regular email. It is a briefing that will help explain what is going on in North Dakota. We are providing it all states that have inquired about what is the risk of sending LEO to North Dakota based on our EMAC.

The complete situation here on the ground is very complex almost unbelievable unless you have been here since the beginning. What has started as peaceful protest by concerned citizens and Tribal members has grown to situation that is at times out of control with recent actions bordering on terrorism with state, national , and international implications.

I look forward to talking to you all this morning. If the file transfer works and you get a chance to look at it before the conference call that would be great.

Greg

You can download the file using the following link: https://apps.nd.gov/itd/filetransfer/downloadByInvitation.htm?id=1-cc8f91f7036cb333c3fdef74e22b47ff.

Subject: North Dakota EMAC request 2016

DATE: November 8, 2016 2:14:26 PM MST

Dear PIOs,

The Division of Emergency Management has received the following request from North Dakota via the Emergency Management Assistance Compact (a system of state-to-state mutual aid). The request is for one PIO to support North Dakota for two weeks during the pipeline protests going on there.

If you are interested in supporting North Dakota, please let me know and I'll get you in touch with our EMAC coordinator.

Please read the following resource request. Here's the short version; the entire request follows:

Deployment period: 11/13-28/16
Description:

> One PIO to act in a support capacity to lead PIO for an ongoing protest incident in ND. 2 week deployment (14 days with 2 days for travel) for a total of 16 days Equipment needed: Laptop computer Assisting lead PIO with media calls, crafting fact sheets, timelines, media alerts, and news releases. Hours are Typically 8:00 am-5:00 pm.
>
> Safety: No safety or health concerns identified; Cold weather gear required.
>
> Working conditions: Field impacted area; Normal - infrastructure & support services operational; Mobile laptop and media phone will be issued.

Resource Request #1102-RR-5386

Contact Name: (b)(6)

Contact Email: (b)(6)@nd.gov

Contact Phone: (b)(6)

Update:

Broadcasted To: All

Total Recipients: 377

Event Name:	Dakota Access Pipeline (DAPL) Protest October 2016		
State Mission TN #:	16-073-227	EM Software TN #:	16-073-227
Requesting Agency:	State of North Dakota	EMAC TN #:	1102-RR-5386

Subject: Pipeline update

Pipeline update:

Yesterday was a big day, Jessy Jackson arrived on site and talks between the protestors and law enforcement broke down.

- There was an article today from the Associated Press Regarding WY sending law enforcement to North Dakota: http://trib.com/news/state-and-regional/wyoming-sends-troopers-to-north-dakota-pipeline-protest/article_2972e493-0b71-5cab-9c7d-3c27fb67542e.html (full article pasted below). Pre the article both tribes in WY are opposed to sending the law enforced support.
- There was a media report yesterday that Indiana is sending law enforcement to support ND. The article references FEMA paying for the support. We have reached out to Region IV for awareness and to let them know that FEMA is not paying for any law enforcement. The article is likely referencing EMAC. http://www.theindychannel.com/news/call-6-investigators/call-6-dozens-of-indiana-officers-deployed-to-north-dakota-pipeline-dispute-but-whos-paying (full article below).
- I am hearing a lot about treaty rights on social media, this morning on NPR the Chairman of the Standing Rock Sioux talked about this land belonging to the tribes based on treaties (NPR and other media sources).
- A new encampment (the 1851 Treaty Camp) has been set up directly on the pipeline path, which is private property (KILI Radio).
- On Wed. Jessy Jackson arrived on site to speak out about the many human and civil rights violations being perpetrated by local police (Indian Country Today).
- Actor Mark Ruffalo was at Standing Rock yesterday showing his support and Leonardo DiCaprio announced today he is on his way (Indian Country Today).
- Everyone is still calling for peaceful protests (multiple media outlets).
- It is being reported there have been between 260 and 300 arrests since the protests began with most of them happening last Saturday and pepper spray being used by law enforcement (multiple media sources).
- FAA has issued temporary flight restrictions over the protest camps. Only response aircraft in support of law enforcement activity are authorized in the airspace (Bismarck Tribune).
- Negotiations broke down between protestors and law enforcement yesterday (Bismarck Tribune).
- This inforum link is to a video that shows clear frustration by law enforcement and that they do not want a confrontation. http://www.inforum.com/news/government/4145254-jesse-jackson-joins-pipeline-protest-effort-faa-issues-no-fly-restriction (InForum)

This is a particularly good story about law enforcement and what happened yesterday.

http://www.inforum.com/news/government/4146041-new-roadblock-emerges-highway-1806-confrontation-between-protesters-law

New roadblock emerges on Highway 1806 as confrontation between protesters, law enforcement looms

By Amy Dalrymple and Mike Nowatzki / Forum News Service Today at 10:22 a.m.

A roadblock manned by North Dakota National Guard troops blocks North Dakota Hwy. 1806 before sunrise Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor2 / 2

MORTON COUNTY, N.D. — One day after negotiations between Dakota Access Pipeline protesters and law enforcement broke down, the mood was tense but quiet Thursday, Oct. 27, as the sun rose above the resistance camps.

Above, in restricted airspace, a North Dakota Highway Patrol aircraft circled.

Cecily Fong, spokeswoman for the state's Department of Emergency Services, said medical staffing is in place should any injuries occur at the protest sites.

She said law enforcement will likely issue a warning to protesters congregating at a camp along State Highway 1806, where pipeline opponents have set up teepees and staged hay bales, logs and barbed wire to block the road, if necessary.

However, Fong said she didn't know the timing of any law enforcement action planned, and officers want protesters to leave the northern camp, which is on private property recently purchased by the pipeline's developer, Dallas-based Energy Transfer Partners.

Protesters will be encouraged to return to the southern camp on U.S. Army Corps of Engineers land.

By Thursday morning, protesters set up an additional "halfway" roadblock on Highway 1806 — between their main barricade and the frontline camp where they've promised to hold their ground.

At the halfway roadblock, pipeline opponents staged tires, plywood, sheet metal and logs — all ready to move onto the highway should law enforcement approach. The additional roadblock provides more time for those at the main camp to leave or join the protesters at the frontline camp.

Sam Wounded Knee, from Crow Creek Nation in South Dakota, spent the night at the "halfway" roadblock.

He said a plane flew overhead through the night, and it appeared two people were in the surrounding hills to the west and using flashlights to signal back and forth with the plane.

Asked if he expects violence in a confrontation, “from the police, yeah, definitely,” he said.

“All we’re trying to do is protect our people,” Wounded Knee said, adding that women and children were asked to leave the frontline camp Wednesday night. About 200 people are at the frontline camp.

With the new roadblock established by protesters, Highway 1806 has numerous staging areas, camps and road blocks stretched out over several miles, starting with an equipment staging area set up by law enforcement about a mile south of Fort Rice.

Traveling south on 1806, in succession, there is a law enforcement barricade, followed by the protesters’ main barricade, halfway roadblock, frontline camp and main camp.

On Wednesday, negotiations between pipeline opponents and law enforcement officials broke down, setting up a possible clash as hundreds of protesters vowed to hold their ground at a the frontline camp directly in the path of the four-state oil pipeline.

A contingent of law enforcement and National Guard officials met with camp representatives on Highway 1806.

Cass County Sheriff Paul Laney of Fargo, who is helping Morton County coordinate the law enforcement response, made one last plea for protesters to remove their roadblock on 1806 and abandon the roughly 200-person “frontline” camp, where teepees and tents continued to pop up on land where the pipeline is planned

“We’re here telling you this is private property and you have to leave,” Laney told camp coordinator Mekasi Camp-Horinek on Wednesday. “We don’t want a confrontation. Please stand your people down and go back to the main camp.”

Mekasi pointed at the road – “our no surrender line,” he said – and then back at the frontline camp standing in the way of the four-state, $3.8 billion oil pipeline – their “no retreat” line.

“That’s your final word?” Laney asked.

“That’s my final word,” Camp-Horinek said, walking away.

“Good day, gentleman,” Laney said, turning toward the staging area about five miles away near Fort Rice, where a mass of law enforcement and military forces has gathered.

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an “impasse.”

Kirchmeier emphasized that “the last thing we want to do is do it forcefully.”

“If we have the chance for open dialog, that’s what we want to continue,” he said.

Pipeline opponents say they’ve reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents’ rights by blocking the highway.

Wyoming sends troopers to North Dakota pipeline protest

Wyoming sends troopers to North Dakota pipeline protest

- BEN NEARY Associated Press
- Updated 11 hrs ago

- AP

Protesters set up tepees and tents Monday in southern North Dakota on property owned by the pipeline company.

CHEYENNE — Wyoming has sent six highway patrol troopers to North Dakota to help authorities deal with Indian protesters demonstrating against the construction of an oil pipeline, prompting objections Tuesday from some Wyoming Indian leaders.

Sending the troopers merely extends emergency help to another state and does not signal that Wyoming has taken a position on the pipeline controversy, Wyoming Gov. Matt Mead said.

But Dean Goggles, chairman of Northern Arapaho Business Council, called on Mead to recall the troopers immediately.

“The North Dakota tribes and tribal members from around the nation are attempting to protect both the environment and sites which have ceremonial, religious and cultural significance to the tribes,” Goggles said.

More than 100 protesters were arrested last weekend in Morton County, North Dakota, in the faceoff between protesters and Texas-based Energy Transfer Partners, developer of the four-state Dakota Access oil pipeline.

The $3.8 billion pipeline, most of which has been completed, crosses through North Dakota, South Dakota, Iowa and Illinois. Opponents worry about potential effects on drinking water on the Standing Rock Sioux Tribe’s reservation as well as harm to cultural sites.

Col. Kebin Haller of the Wyoming Highway Patrol said six troopers were sent to North Dakota on Saturday and are expected to remain there until Nov. 8.

The troopers volunteered after the governor of North Dakota declared an emergency and asked other states for law enforcement assistance, Haller said.

The six are members of the patrol's Special Services Squad who have additional training and equipment to address large crowds and civil unrest, he said. North Dakota will pay their salaries and the costs they incur while at the protest.

Mead said the decision to send Wyoming troopers happened because "a neighbor state asked for help and Wyoming answered the call."

"North Dakota asked for help from all 50 states, so Wyoming and other states responded," Mead said.

The Eastern Shoshone and Northern Arapaho tribes in Wyoming have expressed formal support for the protesters.

Jason Baldes, a member of the Eastern Shoshone Tribe and staff member at the Wind River Native Advocacy Center, accused Wyoming officials of supporting the pipeline by sending law enforcement officers to face off against protesters.

"It kind of sheds light on really who's running the show here," Baldes said. "The oil and gas industry really has the final say, and has the politicians and our elected leaders in their pockets."

Mead denied that the decision to send troopers was political.

"The Dakota Access pipeline has no impact on Wyoming, and we have not taken a stance on this issue," he said.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including

emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

At the halfway roadblock, pipeline opponents staged tires, plywood, sheet metal and logs — all ready to move onto the highway should law enforcement approach. The additional roadblock provides more time for those at the main camp to leave or join the protesters at the frontline camp.

Sam Wounded Knee, from Crow Creek Nation in South Dakota, spent the night at the "halfway" roadblock.

He said a plane flew overhead through the night, and it appeared two people were in the surrounding hills to the west and using flashlights to signal back and forth with the plane.

Asked if he expects violence in a confrontation, “from the police, yeah, definitely,” he said.

“All we’re trying to do is protect our people,” Wounded Knee said, adding that women and children were asked to leave the frontline camp Wednesday night. About 200 people are at the frontline camp.

With the new roadblock established by protesters, Highway 1806 has numerous staging areas, camps and road blocks stretched out over several miles, starting with an equipment staging area set up by law enforcement about a mile south of Fort Rice.

Traveling south on 1806, in succession, there is a law enforcement barricade, followed by the protesters’ main barricade, halfway roadblock, frontline camp and main camp.

On Wednesday, negotiations between pipeline opponents and law enforcement officials broke down, setting up a possible clash as hundreds of protesters vowed to hold their ground at a the frontline camp directly in the path of the four-state oil pipeline.

A contingent of law enforcement and National Guard officials met with camp representatives on Highway 1806.

Cass County Sheriff Paul Laney of Fargo, who is helping Morton County coordinate the law enforcement response, made one last plea for protesters to remove their roadblock on 1806 and abandon the roughly 200-person “frontline” camp, where teepees and tents continued to pop up on land where the pipeline is planned

“We’re here telling you this is private property and you have to leave,” Laney told camp coordinator Mekasi Camp-Horinek on Wednesday. “We don’t want a confrontation. Please stand your people down and go back to the main camp.”

Mekasi pointed at the road – “our no surrender line,” he said – and then back at the frontline camp standing in the way of the four-state, $3.8 billion oil pipeline – their “no retreat” line.

“That’s your final word?” Laney asked.

“That’s my final word,” Camp-Horinek said, walking away.

“Good day, gentleman,” Laney said, turning toward the staging area about five miles away near Fort Rice, where a mass of law enforcement and military forces has gathered.

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an “impasse.”

Kirchmeier emphasized that “the last thing we want to do is do it forcefully.”

“If we have the chance for open dialog, that’s what we want to continue,” he said.

Pipeline opponents say they’ve reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents’ rights by blocking the highway.

Wyoming sends troopers to North Dakota pipeline protest

Wyoming sends troopers to North Dakota pipeline protest

- BEN NEARY Associated Press
- Updated 11 hrs ago

- AP

Protesters set up tepees and tents Monday in southern North Dakota on property owned by the pipeline company.

CHEYENNE — Wyoming has sent six highway patrol troopers to North Dakota to help authorities deal with Indian protesters demonstrating against the construction of an oil pipeline, prompting objections Tuesday from some Wyoming Indian leaders.

Sending the troopers merely extends emergency help to another state and does not signal that Wyoming has taken a position on the pipeline controversy, Wyoming Gov. Matt Mead said.

But Dean Goggles, chairman of Northern Arapaho Business Council, called on Mead to recall the troopers immediately.

“The North Dakota tribes and tribal members from around the nation are attempting to protect both the environment and sites which have ceremonial, religious and cultural significance to the tribes,” Goggles said.

More than 100 protesters were arrested last weekend in Morton County, North Dakota, in the faceoff between protesters and Texas-based Energy Transfer Partners, developer of the four-state Dakota Access oil pipeline.

The $3.8 billion pipeline, most of which has been completed, crosses through North Dakota, South Dakota, Iowa and Illinois. Opponents worry about potential effects on drinking water on the Standing Rock Sioux Tribe’s reservation as well as harm to cultural sites.

Col. Kebin Haller of the Wyoming Highway Patrol said six troopers were sent to North Dakota on Saturday and are expected to remain there until Nov. 8.

The troopers volunteered after the governor of North Dakota declared an emergency and asked other states for law enforcement assistance, Haller said.

The six are members of the patrol's Special Services Squad who have additional training and equipment to address large crowds and civil unrest, he said. North Dakota will pay their salaries and the costs they incur while at the protest.

Mead said the decision to send Wyoming troopers happened because "a neighbor state asked for help and Wyoming answered the call."

"North Dakota asked for help from all 50 states, so Wyoming and other states responded," Mead said.

The Eastern Shoshone and Northern Arapaho tribes in Wyoming have expressed formal support for the protesters.

Jason Baldes, a member of the Eastern Shoshone Tribe and staff member at the Wind River Native Advocacy Center, accused Wyoming officials of supporting the pipeline by sending law enforcement officers to face off against protesters.

"It kind of sheds light on really who's running the show here," Baldes said. "The oil and gas industry really has the final say, and has the politicians and our elected leaders in their pockets."

Mead denied that the decision to send troopers was political.

"The Dakota Access pipeline has no impact on Wyoming, and we have not taken a stance on this issue," he said.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including

emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more

than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that

it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff’s deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, “we are not seeing a big increase.”

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika’s potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,
Jerry

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

“It is very difficult to work out truly what is going on,” said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

“The fact is we don’t have any idea how many cases there were,” said Maierovitch, meaning it’s possible Brazil’s birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don’t have symptoms and don’t realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress’s failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

“We’ll have to hold our breath to see what happens in labor and delivery suites in a few months,” he said. “That’s the only way we’ll know whether we’ve dodged a bullet.”

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,
Jerry

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney
6:00 PM, Oct 24, 2016
INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

“Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request,” said Erickson. “They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request.”

Indiana is acting as a “team player,” as it helps North Dakota with security during the pipeline dispute.

“We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc,” said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform’s glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client’s satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and

consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including

nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

“If you don’t know about something, you better take preventative measures to minimize the risks,” Espinal said. “So maybe the fact that we don’t have a lot of microcephaly means that we were doing our jobs” and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador’s government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Wyoming sends troopers to North Dakota pipeline protest

Wyoming sends troopers to North Dakota pipeline protest

- BEN NEARY Associated Press
- Updated 11 hrs ago

- AP

Protesters set up tepees and tents Monday in southern North Dakota on property owned by the pipeline company.

CHEYENNE — Wyoming has sent six highway patrol troopers to North Dakota to help authorities deal with Indian protesters demonstrating against the construction of an oil pipeline, prompting objections Tuesday from some Wyoming Indian leaders.

Sending the troopers merely extends emergency help to another state and does not signal that Wyoming has taken a position on the pipeline controversy, Wyoming Gov. Matt Mead said.

But Dean Goggles, chairman of Northern Arapaho Business Council, called on Mead to recall the troopers immediately.

“The North Dakota tribes and tribal members from around the nation are attempting to protect both the environment and sites which have ceremonial, religious and cultural significance to the tribes,” Goggles said.

More than 100 protesters were arrested last weekend in Morton County, North Dakota, in the faceoff between protesters and Texas-based Energy Transfer Partners, developer of the four-state Dakota Access oil pipeline.

The $3.8 billion pipeline, most of which has been completed, crosses through North Dakota, South Dakota, Iowa and Illinois. Opponents worry about potential effects on drinking water on the Standing Rock Sioux Tribe’s reservation as well as harm to cultural sites.

Col. Kebin Haller of the Wyoming Highway Patrol said six troopers were sent to North Dakota on Saturday and are expected to remain there until Nov. 8.

The troopers volunteered after the governor of North Dakota declared an emergency and asked other states for law enforcement assistance, Haller said.

The six are members of the patrol’s Special Services Squad who have additional training and equipment to address large crowds and civil unrest, he said. North Dakota will pay their salaries and the costs they incur while at the protest.

Mead said the decision to send Wyoming troopers happened because “a neighbor state asked for help and Wyoming answered the call.”

“North Dakota asked for help from all 50 states, so Wyoming and other states responded,” Mead said.

The Eastern Shoshone and Northern Arapaho tribes in Wyoming have expressed formal support for the protesters.

Jason Baldes, a member of the Eastern Shoshone Tribe and staff member at the Wind River Native Advocacy Center, accused Wyoming officials of supporting the pipeline by sending law enforcement officers to face off against protesters.

“It kind of sheds light on really who’s running the show here,” Baldes said. “The oil and gas industry really has the final say, and has the politicians and our elected leaders in their pockets.”

Mead denied that the decision to send troopers was political.

“The Dakota Access pipeline has no impact on Wyoming, and we have not taken a stance on this issue,” he said.

Panel votes to borrow $6M for costs associated with pipeline protests, blasts feds inaction

By Mike Nowatzki Today at 12:18 p.m.

NO DAKOTA ACCESS PIPELINE
NO DAKOTA ACCESS PIPELINE
HONOR THE EARTH....
UTION

Demonstrators against the Dakota Access Pipeline south of Mandan, N.D., gather in opposition early this month. File photo.

BISMARCK — The state Emergency Commission voted Wednesday, Sept. 21, to borrow up to $6 million from the state-owned Bank of North Dakota to support law enforcement efforts

related to the Dakota Access Pipeline protests, but not before members blasted the lack of federal support to deal with protesters camped out on federal land.

"I know we have to do it, but it's not right, and the lack of federal involvement is disgusting," said House Majority Leader Al Carlson, R-Fargo. "And we need to protect our North Dakota people, but this is just plain wrong that they're ignoring this issue."

Maj. Gen. Alan Dohrmann, adjutant general of the North Dakota National Guard, said the state has spent $1.88 million on protest-related costs so far, the bulk of it personnel costs for assistance from the National Guard and law enforcement agencies from across the state. Morton County estimated last week it had spent about $400,000 on top of that.

The $6 million line of credit from the Bank of North Dakota will fund future efforts as authorized by Gov. Jack Dalrymple's emergency declaration Aug. 19. The Legislature will have to make a deficiency appropriation from the state's general fund to pay back the bank after lawmakers convene in regular session in January, Budget Director Pam Sharp said.

Authorities have responded to multiple protests at pipeline construction sites and in Bismarck-Mandan since protests began to ramp up in mid-August. They've also created a traffic checkpoint and increased patrols in Morton County, which they say are necessary for the safety of local residents, farmers and ranchers and the thousands of protesters camped out on U.S. Army Corps of Engineers land about 35 miles south of Mandan.

Last Friday, the Corps of Engineers issued a special use permit for protesters to use Corps land south of the Cannonball River but not the land north of the river where the majority of them are camping, because that land is subject to an existing grazing lease.

Carlson said it bothers him that it's "a federal problem that they've ignored" and the Legislature will have to cover the costs at a time of budget shortfalls. Rep. Jeff Delzer, R-Underwood, agreed.

"The taxpayers shouldn't have to be paying for this," he said.

Dalrymple said he's been in contact with the White House, U.S. Department of Justice, Corps of Engineers, Department of Interior and the state's congressional delegation but is still waiting to hear if they're going to help financially or with in-kind services.

"The problem that we have, of course, is that these public safety needs are imminent every day," Dalrymple said. "We really have no choice but to protect the public with law enforcement. Recovering funds from the federal government is definitely a top priority, but it undoubtedly will take some time."

The commission's other members are Secretary of State Al Jaeger, Rep. Jeff Delzer, R-Underwood, Sen. Rich Wardner, R-Dickinson, and Sen. Ray Holmberg, R-Grand Forks.

Subject: North Dakota EMAC request 2016

DATE: November 8, 2016 2:14:26 PM MST

Dear PIOs,

The Division of Emergency Management has received the following request from North Dakota via the Emergency Management Assistance Compact (a system of state-to-state mutual aid). The request is for one PIO to support North Dakota for two weeks during the pipeline protests going on there.

If you are interested in supporting North Dakota, please let me know and I'll get you in touch with our EMAC coordinator.

Please read the following resource request. Here's the short version; the entire request follows:

Deployment period: 11/13-28/16
Description:

> One PIO to act in a support capacity to lead PIO for an ongoing protest incident in ND. 2 week deployment (14 days with 2 days for travel) for a total of 16 days Equipment needed: Laptop computer Assisting lead PIO with media calls, crafting fact sheets,

timelines, media alerts, and news releases. Hours are Typically 8:00 am-5:00 pm.

Safety: No safety or health concerns identified; Cold weather gear required.

Working conditions: Field impacted area; Normal - infrastructure & support services operational; Mobile laptop and media phone will be issued.

Resource Request #1102-RR-5386

Contact Name: (b)(6)

Contact Email: (b)(6)@nd.gov

Contact Phone: (b)(6)

Update:

Broadcasted To: All

Total Recipients: 377

Event Name:	Dakota Access Pipeline (DAPL) Protest October 2016		
State Mission TN #:	16-073-227	EM Software TN #:	16-073-227
Requesting Agency:	State of North Dakota	EMAC TN #:	1102-RR-5386

Requesting State REQ-A Contact:

First Name:	(b)(6)	Last Name:	(b)(6)
Phone 1:	(b)(6)	Phone 2:	(b)(6)
Email 1:	(b)(6)@nd.gov	Email 2:	nddes@nd.gov

Mission Type/Source: State Type / Status:

Mission Description: Public Information Offcier

Resource Description: One PIO to act in a support capacity to lead PIO for an ongoing protest incident in ND. 2 week deployment (14 days with 2 days for travel) for a total of 16 days Equipment needed: Laptop computer Assisting lead PIO with media calls, crafting fact sheets, timelines, media alerts, and news releases. Hours are Typically 8:00 am-5:00 pm or as needed to respond to protest activities.

NIMS Type:

Requested: 1 # Type: Personnel

Deployment Dates (including travel days):

Mobilization: Demobilization:

Deployment Date: 2016-11-13 Demobilization Date: 2016-11-28

Duty Length: 16

Deployment Details:

Work Location/Facilities: State EOC
Location/Facility Name: North Dakota State Emergency Operations Center
Address 1: 35 Fraine Barracks Lane
Address 2:
City: Bismarck
Zip Code: 58504

Working Conditions: Normal - Infrastructure & Support services operational
Working Conditions Comments:
Living Conditions: Normal - All amenities available
Living Conditions Comments: Cold weather gear
Logistics Comments: Laptop Media cell phone will be issued

Identify Health & Safety Concerns (All selected Apply):

X No Safety or Health Concerns have been identified
Immunizations or Vaccinations are suggested to deploy
Environmental Hazards Exist
Personal Protection Equipment Needed

Safety Concerns/Remarks:

Requesting State Resource Coordination Contact:
